

Alla Vostra Mobile App Work Log - June 12, 2026

Compiled summary for June 12, 2026 - focus: Shop-screen restructuring, slogan and typography exploration, cartoon shipping asset spacing, popup overlay experimentation, square mockup generation, and the first version of the new offerings-led Shop concept.

Includes tracked Git work from the June 12 mobile-app session, local asset-generation notes, final sizing/alignment decisions that shaped the screen, and the repository state before creating this worklog artifact.

Generated automatically on June 13, 2026 for the June 12 daily worklog after the square cartoon mockups and left-aligned Shop concept were committed to main.

Source Materials Processed

- Read the existing root-level worklog PDFs, especially June 9 and June 10, to preserve the established filename convention, letter-page geometry, title wording, footer cadence, section order, and compact bullet-heavy report style.
- Reviewed Git history for June 12, 2026, including commits ab358cf, f758e82, 88e6479, 7152cff, 03e1fe3, 9fae4bc, and 03c3b79.
- Checked file-level commit stats and confirmed the active June 12 work touched mob/app/shop.js, mob/styles/shopStyles.js, mob/app/_layout.js, the root project snapshots, and the new square cartoon PNG mockups.
- Checked the current repository root as /Users/prahlin/alla_vostra. This remains the active path after the June 10 project move out of the Desktop folder.
- Confirmed repository status was clean before adding this worklog artifact, with main and origin/main at commit 03c3b79.

Current Baseline to Preserve

- Primary app work continues in /Users/prahlin/alla_vostra/mob with Expo Router, Expo SDK 54, React Native 0.81.5, and Expo Go on the Samsung S21 FE as the practical runtime target.
- The Shop route remains visually separate from the main overlay-header pages, while still sharing the Alla Vostra cream background, orange brand color #f7b967, and native Android navigation-bar treatment.
- The Shop screen is now being moved away from a large slogan-first composition and toward an offerings-led concept: compact title, small left-aligned cartoon assets, a bottom orange call-to-action, and popup-style product/offering surfaces.
- The original truck1.png, bargain.png, and sofflo.png files remain important source assets, but June 12 introduced square mockup derivatives better suited to the new compact vertical layout.
- The user's visual tuning process is intentionally iterative. Small numeric changes to margins, font sizes, image sizes, and transforms should be treated as meaningful design decisions rather than incidental churn.

Main Goals We Worked Toward

- Tighten and rebalance the original Shop shipping/cartoon hero area so the truck, bargain, and sofflo images felt more intentional relative to their orange buttons.
- Make the orange plus and arrow symbols feel visually consistent, with matching stroke weight and better-aligned arrowhead bars.
- Explore a more branded top slogan treatment, including custom-font choices, line breaks, Alla/Vostra emphasis, and precise vertical rhythm.
- Create an instant truck-triggered popup overlay between the orange top navigation bar and Android bottom navigation bar, then test how a copied truck shipping block should scale inside it.

- Pivot the top of the Shop screen into a new compact concept with Our Offerings, miniature cartoon images, and a bottom orange call-to-action.
- Create square, simplified cartoon mockups that remove distracting peripheral doodles and fit the new offerings layout more naturally.

Work Completed - Early Shop Spacing and Symbol Polish

- Reduced the vertical gaps between the truck image and its button, and between the soflo image and its button, then performed several smaller proportional follow-up adjustments based on visual review.
- Reduced the rendered size of all three main cartoon shipping images by 5%, then tuned truck and soflo gap values independently so their apparent visual spacing felt balanced.
- Matched the orange down-arrow stroke weight to the plus sign, then adjusted the arrowhead bars horizontally and vertically so the left and right bars no longer protruded awkwardly through the center shaft.
- Shortened and repositioned the arrowhead bar lengths from their top ends while preserving bottom-end placement, producing a cleaner arrowhead that better matched the plus sign geometry.
- Kept the main shipping-stack structure intact while making these visual changes inside `mob/styles/shopStyles.js` and `mob/app/shop.js`.

Work Completed - Slogan Typography Exploration

- Split the original slogan into multiple rows, including separate treatments for With, Alla, Vostra, and always expect, then repeatedly tuned font size, weight, and vertical gaps.
- Moved With into its own row, changed Always count on into always expect..., and later split Vostra onto its own line so the Alla Vostra brand name could dominate the top of the Shop screen.
- Applied TT Fors / TT Fors Light to body slogan words while keeping the Dream Avenue logo font for the Alla Vostra brand lines.
- Removed the three-dot treatment during later iterations, then eventually replaced the whole slogan stack with the much simpler title Our Offerings.
- Increased and decreased title sizing through several passes until Our Offerings wrapped across two lines and fit the new compact offerings-first direction.

Work Completed - Mini Cartoon Image Row and First Offerings Concept

- Created miniature versions of the three cartoon shipping images underneath the slogan, first arranged horizontally and sized relative to the larger source images.
- Adjusted the mini truck and soflo offsets independently so the row felt optically aligned despite each drawing having different transparent padding and silhouette balance.
- Added, moved, and later removed a divider line while testing how strongly the mini image row should separate from the slogan area.
- Reworked the mini images from a horizontal row into a vertical stack after the concept shifted toward small left-side visual anchors paired with future offering text.
- Moved the vertical stack left, first flush to the screen edge, then to a responsive 10% margin, and finally to a 5% screen-left margin based on visual preference.
- Adjusted vertical gaps within the mini stack, including repeated increases between bargain and soflo, and matched the button-to-soflo gap to the soflo-to-bargain gap.

Work Completed - Popup Overlay Experiment

- Added an instant overlay triggered by tapping the truck image. The overlay covers the screen area

- below the orange top nav and above the Android nav area rather than replacing the whole app shell.
- Tested overlay margins at 10% and 5%, then matched the overlay corner radius to the orange Shop button/box radius so the popup felt connected to the existing UI language.
- Copied the large truck image and its orange button into the overlay, then reduced overlay image size, resized the overlay, and added outside-tap dismissal behavior.
- Moved the overlay to sit between the title/offerings area and the mini image stack, then tuned it into a square popup surface with a black border and the same cream background as the page.
- Added a bottom orange call-to-action button underneath the mini images, initially labeled I'm ready!, later changed to Let's do it!, and matched its absolute appearance to the popup overlay button rather than the larger 12-hour shipping boxes.
- Kept the overlay interaction isolated: tapping outside closes it, while taps inside the bordered overlay are captured and do not dismiss the popup.

Work Completed - New Square Cartoon Mockups

- Created truck1_square.png from the original truck artwork by removing the smoke and speed lines behind the happy character, preserving the truck, hat, character face, and envelope, then padding/cropping to a perfect square transparent PNG.
- Created bargain_square.png by removing the gift/present on the right, its related stroke lines, the leftmost glistening star, and later the far-right dark star so the image became a tighter square composition.
- Created soflo_square.png by removing the third building on the right and the right-side cloud/star/doodle assets so the sun became the rightmost remaining asset.
- Refined soflo_square.png after the initial crop made the remaining building edge look too chopped. The final square version preserves a natural visible right wall while thinning that wall so it matches the surrounding vertical building strokes.
- Confirmed final square mockup metadata: truck1_square.png is 614x614, bargain_square.png is 662x662, and soflo_square.png is 516x516, all RGBA transparent PNGs.

Work Completed - Applying the New Mockups to Shop

- Swapped the overlay truck image to truck1_square.png first, then later used the square truck in the mini offerings stack as well.
- Replaced bargain and soflo references with bargain_square.png and soflo_square.png in both the mini image stack and the main shipping blocks.
- Adjusted rendered dimensions for the square mockups after the asset swap, including reducing the truck square preview and increasing bargain/soflo by 25% once the new square versions were active.
- Added image-style overrides for the main bargain and soflo shipping blocks so those square mockups could be enlarged without also changing the truck.
- Shifted the main bargain and soflo square images left so their visible left edges align more closely with the truck image.
- Kept button and text positions separate from image alignment changes to avoid accidentally reintroducing the earlier shipping-button spacing problems.

Validation and Checks Performed

- Repeatedly parsed mob/app/shop.js and mob/styles/shopStyles.js with @babel/parser after Shop screen edits. The final parser checks passed for both files during the June 12 work.
- Used PNG metadata checks while generating square mockups to verify dimensions, RGBA channels, and non-destructive sibling-asset creation instead of overwriting original artwork.

- Created white-background previews of transparent PNGs during local asset work so removed doodles, restored building-wall thickness, and square canvas bounds could be inspected clearly.
- Reviewed Git commit history and file stats for June 12 before producing this worklog.
- Confirmed repository status was clean before generating this PDF artifact.

Files Touched / Added During June 12 (from tracked commits)

- Modified Shop implementation and layout files: `mob/app/shop.js` and `mob/styles/shopStyles.js`.
- Modified one root layout file during slogan/top-screen tuning: `mob/app/_layout.js`.
- Updated project snapshots during the day: `alla_vostra_APP_PROJECT_SNAPSHOT.txt` and `alla_vostra_WEB_PROJECT_SNAPSHOT.txt`.
- Added square cartoon mockup assets: `mob/truck1_square.png`, `mob/bargain_square.png`, and `mob/soflo_square.png`.
- The original non-square source cartoon assets remain available in `mob/truck1.png`, `mob/bargain.png`, and `mob/soflo.png`.

Important Follow-Up Context

- The Shop screen is mid-concept rather than final. The new direction appears to be a compact Our Offerings header, left-aligned vertical cartoon assets, an orange Let's do it! call-to-action, and overlay/popup behavior for offering details or purchase flow.
- Because the cartoon assets are transparent PNGs with different internal padding, future left-edge alignment should be checked visually, not only by comparing React Native image-box coordinates.
- If the square mockups are resized again, preserve their transparent square canvases and avoid regenerating the original wide artwork unless the user explicitly asks to replace source files.
- If the overlay becomes an actual purchase/offering surface, keep the outside-tap dismissal behavior and the square cream/black-border visual language unless the user chooses a different modal style.
- Future worklogs should note the difference between the mini offerings stack images and the main shipping-stack images, because both use the same square assets but have separate sizing and alignment rules.

Output Artifact

- Created this worklog PDF: `alla_vostra_worklog_june12.pdf`.
- No external PDF package was installed; this artifact was generated with a standard-library PDF writer in the same plain-text-readable spirit as the prior daily worklogs.
