

Alla Vostra Mobile App Work Log - July 31, 2026

Compiled summary for Friday, July 31, 2026 - focus: adding splash-driven onboarding with swipe guidance, aligning bubble overlay flow behavior and timing, and finalizing delivery action UX with the Got It CTA.

This artifact is named `alla_vostra_worklog_july31.pdf` because the repository U.S. Eastern-time clock used for generation was Friday, July 31, 2026. It records the current working state at commit `85db90e` after the July 30 daily worklog cycle.

Source Material Reviewed

- Reviewed all 49 root-level Alla Vostra worklog PDFs from May, June, and July with naming and section-order consistency checks.
- Extracted the latest July 30 worklog text and metadata (6-page root-level PDF) to preserve section rhythm, validation language, and output-artifact close style.
- Reviewed commit history spanning `8bb8347` through `85db90e`, including the post-July 30 incremental onboarding, animation, and splash modifications.
- Inspected ``mob/app/_layout.js``, ``mob/components/QuestionOverlay.js``, and ``mob/components/SwipeLeftAnimatic.js`` for implementation detail before logging exact behavior changes.
- Confirmed recent snapshots and project context were already updated to reflect the modified app flow.

Baseline Status Before July 31 Work

- July 30 had already delivered the five-slide question guidance structure, product/quantity/payment image support, and baseline overlay layout for shop-only use.
- The app had a working overlay and bubble flow but no startup splash onboarding state, no hand swipe animation component, and no splash-specific presentation controls.
- Bubble 1-5 behavior and swipe guidance timing were still being refined with user-directed visual and interaction iteration.

Goals for July 31

- Add a startup splash onboarding layer that leads into the bubble 1 overlay using the established App orange gradient plus logo, while suppressing normal interactive chrome.
- Implement reusable swipe-left animatic guidance with reusable timing and looping behavior across bubbles 1-4.
- Preserve normal shop flow behavior while adding splash-only constraints and return routing expectations.
- Finalize bubble 5 action: visually matching "Shop" button style for Got It and ensuring it closes behavior as required.
- Normalize visual alignment, spacing, and interaction expectations across bubble overlays 2-5 to keep the motion tutorial coherent.
- Preserve the repo's snapshot and worklog update convention when changes are complete.

Work Completed - Splash Onboarding and Presentation

- Added startup splash setup in ``mob/app/_layout.js`` using ``playstore-orange-gradient.png`` as the full-screen onboarding backdrop.
- Added the delayed-question-overlay reveal logic so the app opens on pure splash background/logo and then fades in the bubble guide after a short reveal delay.
- Introduced splash-only bubble presentation wiring (``presentation="splash"``, forced visible) so onboarding runs as a standalone sequence before normal app interaction.
- Removed splash top/bottom chrome bands and removed splash backdrop-dismiss behavior so users cannot exit onboarding by tapping outside the guided overlay.
- Reused the existing in-app `Alla Vostra` header typography and positioning so the logo appears as the single focal element during startup.

Work Completed - Swipe Animatic and Navigation Controls

- Added new reusable `SwipeLeftAnimatic` component and mounted it on bubble overlays 1-4 with right-to-left swiping glyphs and hand motion.
- Configured the guidance cycle to wait 3 seconds before each burst, execute two visible swipes, and run continuously across global overlay sessions.
- Kept the animation globally stateful across bubbles 1-4 so the loop does not reset on step changes.
- Implemented right-swipe navigation to previous bubbles for all screens, including the behavior on bubble 1 that returns in line with the shop help flow expectations.
- Matched the new animatic behavior to the required faster-visible cadence in response to prior adjustments.

Work Completed - Bubble 5 Action and Visual Updates

- Updated bubble 5 "Got It" behavior to use the bottom navigation Shop button style and visual language for consistency.
- Routed splash-mode "Got It" action to Home while leaving normal-mode closure behavior aligned to Shop overlay context.
- Added/updated the smiley-plus-thumbs delivery visual treatment and adjusted its size and vertical placement for balance in the overlay stack.
- Harmonized vertical stack gaps for bubbles 2-5 to match bubble 1 baseline and shifted image stack anchors for consistent center alignment.
- Standardized bubble 4 payment stack to include horizontal wallet/card and accepted-check visuals as requested.

Work Completed - Assets and Visual Context

- Added onboarding motion assets and mockups for swipe and thumb/face iterations in `docs/prototypes/`, preserving the same root-level process used for other prototype artifacts.
- Added the Play Store orange gradient image under `mob/assets/store/playstore-orange-gradient.png` and ensured splash references this new source.
- Updated project root and web snapshot references accordingly through the existing workflow and kept changes in existing snapshot artifacts.

Validation and Checks Performed

- Confirmed clean working tree at commit `85db90e` before and during final worklog-ready verification.
- Reviewed commit metadata and file-level diff for `85db90e` to ensure the worklog coverage matched exactly this onboarding/splash feature window.
- Confirmed the latest pre-existing PDF artifact is `alla\_vostra\_worklog\_july30.pdf` before constructing the July 31 worklog sequence.
- Confirmed all required changed files were present and readable using shell checks, and that no additional ad hoc source files were introduced outside the intended scope.
- Confirmed the new splash and overlay flow behavior remained routed around existing screen pathways and preserved non-splash Shop behavior.
- Did not run additional functional device tests during this worklog drafting pass.

Files Touched During July 31

- mob/app/_layout.js - added splash entry layer, startup gradient/logo rendering, delayed question overlay reveal, and splash presentation handling.
- mob/components/QuestionOverlay.js - added splash-aware behavior, right-swipe previous navigation, Got It routing alignment, and cross-bubble layout harmonization.
- mob/components/SwipeLeftAnimatic.js - introduced animated hand/swoosh swipe tutorial component used in bubbles 1-4.
- mob/assets/store/playstore-orange-gradient.png - added splash background image source.
- alla_vostra_APP_PROJECT_SNAPSHOT.txt - snapshot refreshed.
- alla_vostra_WEB_PROJECT_SNAPSHOT.txt - snapshot refreshed.
- docs/prototypes/swipe-left-animatic.html - first motion mockup source.

- docs/prototypes/swipe-left-animatic.html.png - first motion mockup render.
- docs/prototypes/got-it-thumbs-up-icon-mockups.html - icon exploration source.
- docs/prototypes/got-it-thumbs-up-icon-mockups.html.png - icon exploration render.
- docs/prototypes/got-it-thumbs-up-icon-mockups-v2.html - additional icon exploration source.
- docs/prototypes/got-it-thumbs-up-icon-mockups-v2.html.png - additional icon exploration render.

Follow-Up Context

- The latest committed snapshot for this window is `85db90e`, and this worklog reflects those committed changes.
- Additional behavior tuning may continue with real-device pass-through if you want another animation cadence or final splash gradient variant pass.

Output Artifact

- Generated worklog text in the established Alla Vostra style and rendered it as a PDF with 3 letter-size pages.
- Location: repository root, alongside existing root-level worklog PDFs.
- Generated worklog artifact: `alla_vostra_worklog_july31.pdf`
