

Alla Vostra Mobile App Work Log - June 17, 2026

Compiled summary for Wednesday, June 17, 2026 - focus: Shop screen cart-entry controls, Piccola overlay quantity behavior, shopping-cart button geometry, worklog artifact generation, and final add-to-cart visual states.

Generated automatically on June 18, 2026 for the June 17 daily worklog after reviewing the repository Git history, prior PDF worklog format, and current mobile Shop source files.

Includes tracked Git work from the June 17 mobile-app session: the June 15 PDF worklog artifact, the smaller ready/back action buttons with cart icon placeholder, and the Piccola add-to-cart/quantity-control build that replaced BUY with ADD.

Source Materials Processed

- Read the existing root-level June 15 PDF worklog with pdftotext to preserve the established title cadence, source-material section, compact bullet style, validation section, follow-up context, and output-artifact close.
- Reviewed June 17 Git history from commit 0a69372 through f698b03, including timestamps, commit messages, file lists, and patch details for mob/app/shop.js, mob/styles/shopStyles.js, mob/app/products.js, and the June 15 PDF artifact.
- Checked current source hotspots in mob/app/shop.js and mob/styles/shopStyles.js to confirm the final checked-in state before generating this June 17 artifact.
- Confirmed the working tree was clean before this worklog generation, so the app state described here reflects the committed June 17 baseline.
- Used file, pdftotext, rg, sed, git log, git show, and git status locally; no external PDF package was installed for this artifact.

Current Baseline to Preserve

- Primary app work remains in /Users/prahlin/alla_vostra/mob, with Expo Router and React Native as the mobile runtime surface.
- The Shop screen still has a fixed preview composition, a top product/image area, bottom action controls, and a modal-style overlay for product-specific navigation.
- The Shop overlay keeps Piccola as the default experimentation target while still preserving other product routes for Sei Perfetto and Buon Natale.
- Major tappable controls continue to use the shared thick black border and shadow vocabulary, while hairline dividers and low-visibility quantity states use the subtle 0.375px gray hairline treatment where explicitly requested.
- The shopping functionality remains intentionally frontend/prototype oriented: quantity and confirmation states exist visually in the overlay, but no backend cart or payment processor flow was wired on June 17.

Main Goals We Worked Toward

- Move the Shop overlay from a simple payment button toward a future cart workflow without committing to backend shopping logic yet.
- Replace BUY with ADD and make the Piccola overlay action feel like a quantity selector rather than a one-shot purchase link.
- Create an experimental but precise right-side Piccola action stack: badge, price, ADD button, quantity number, up/down controls, and a plus-to-confirm box.
- Keep every geometry change visually deliberate by repeatedly matching dimensions, top edges, bottom edges, border radii, triangle widths, hairline styles, and button visibility states.
- Retain the existing premium button language: orange/white fills, black rounded borders for full-strength controls, subtle hairlines for low-visibility informational boxes, and SVG-based icons where shape accuracy matters.

Work Completed - June 15 Worklog Artifact

- Generated and committed `alla_vostra_worklog_june15.pdf` as a four-page root-level PDF summarizing the June 15 mobile-app session.
- The June 15 PDF captured the prior overlay navigation, header, global border/shadow, image recolor, Android back-button, and cart-placeholder work.
- Preserved the repository convention of root-level worklog PDFs named `alla_vostra_worklog_<monthday>.pdf`.

Work Completed - Ready / Go Back / Cart Button Geometry

- Reduced the I'm ready! and Go back action-button width to make room for a right-side cart-placeholder button in the Shop overlay action row.
- Added a custom SVG `ShoppingCartIcon` directly inside `mob/app/shop.js` using `react-native-svg` primitives, avoiding a new icon dependency.
- Placed the shopping-cart icon inside the orange rectangular side button next to Go back, with centered alignment and rounded corners consistent with the other small buy/action controls.
- Kept the cart-placeholder button visually ready for future shopping functionality while leaving `onPress` as an intentional no-op.
- Adjusted the side-button gap and width calculation so the right/left margins stay visually balanced against the Go back button and screen edge.

Work Completed - Product Copy and Piccola Layout

- Updated Piccola product copy in both `mob/app/shop.js` and `mob/app/products.js` from found in South Florida to found anywhere in South Florida.
- Reduced the overlay inner horizontal padding by changing `truckOverlayInnerHorizontalPadding` to use the halved margin value, tightening the paragraph/action-column relationship.
- Capped the Piccola paragraph width at 50% of the screen so the right-side quantity and price assets have a denser, more controlled area to occupy.
- Tightened the image-to-paragraph region with smaller top/bottom gaps and a slightly higher image row position, keeping the overlay content compact after several visual passes.
- Changed POPULAR styling to green, increased its size to 12.5px, and reduced letter spacing to 0.5832 so the badge reads more tightly above the price.

Work Completed - BUY to ADD Conversion

- Renamed the overlay action button text from BUY to ADD for Piccola, while keeping non-Piccola product buttons able to fall through to `paymentUrl` behavior.
- Made tapping ADD on Piccola initialize quantity to 1 when the current quantity is 0, and leave the quantity alone when it is already above 0.
- Added `showPiccolaAddedState`, `showPiccolaQuantityControls`, `showPiccolaQuantityMuted`, `showPiccolaQuantityCheckBox`, and `showPiccolaQuantityCheckConfirmed` derived state to keep the visual logic readable.
- Added `piccolaOverlayQuantity` state and Piccola-specific quantity update handlers so the overlay can increment, decrement, cap at 9, and return to 0.
- Added a reset effect so the confirmation state clears when quantity returns to 0, preventing stale confirmed visuals from surviving a reset.

Work Completed - Quantity Number Box

- Added a white number box to the right of the ADD button, displaying the current Piccola quantity and staying visible even before ADD is tapped.
- Iterated number-box dimensions heavily: half-size, 20% larger, matched to ADD height, then widened to exactly 50% of the ADD button width.
- Settled the number box at 29.1375px wide and 34.965px tall, matching the ADD button height

and half of the 58.275px ADD button width.

- Removed rounded corners from the number box and gave it the same app hairline border style used elsewhere: 0.375px with `rgba(17, 17, 17, 0.28)`.
- Matched the 0 glyph to the low-visibility state through muted coloring, while nonzero quantities use the normal black text style.

Work Completed - Triangle Quantity Controls

- Added up/down quantity controls tightly attached to the number box: upper triangle increments up to 9 and lower triangle decrements down to 0.
- Initially experimented with React Native border-triangle geometry, then replaced it with real SVG triangles because CSS-style border triangles could not produce clean, even borders on all edges.
- Created `PiccolaQuantityTriangle` in `mob/app/shop.js`, rendering direction-specific SVG triangle paths with orange fill and a true 2px stroke.
- Muted triangle state now uses pale orange fill and gray stroke when quantity is 0, while active/nonzero triangles use the stronger orange fill and black stroke.
- Centered the triangle controls within the widened 29.1375px quantity column after widening the number box to half of the ADD button width.

Work Completed - Plus / Confirmation Box

- Added a top box above the upper triangle as a future cart-confirmation affordance for Piccola quantity selection.
- Iterated this box from white checkmark experiments into the current plus-to-check workflow: invisible at 0, white with green plus when quantity is above 0, and green with white check after tapping it.
- Made the top box 29.1375px square with the same 10.5px button corner radius and the shared full-strength black border/shadow when visible in its normal state.
- Changed the pending white state from a green checkmark to a green plus sign so it communicates adding/confirming rather than already-complete status.
- Kept the confirmed state persistent during above-0 quantity and reset it automatically when the quantity returns to 0.

Work Completed - Visibility Rules

- Quantity 0 state: number box remains as a low-visibility white/hairline informational box, triangles are muted, and the plus/check top box is invisible.
- Quantity above 0 state before confirmation: ADD is visually tapped/softened, the number box shows the selected number, triangles are active, and the top box appears white with a green plus.
- Quantity above 0 after confirmation: the top box turns green with a white checkmark and stays that way until quantity returns to 0.
- The low-visibility and full-visibility states were separated so zero-state controls do not compete visually with active shopping controls.
- The visual behavior is currently Piccola-specific, letting the design mature in one product screen before being generalized to Sei Perfetto and Buon Natale.

Validation and Checks Performed

- Ran repeated JavaScript parser checks with `node --check` on `mob/app/shop.js` after structural edits to state, helper components, and overlay render logic.
- Ran repeated parser checks with `node --check` on `mob/styles/shopStyles.js` after geometry, border, visibility, and shadow-style changes.
- Used `rg` and `sed` repeatedly to inspect exact current styles before editing, avoiding stale mental models during pixel-level iteration.

- Used git status to confirm the working tree was clean before generating this June 17 PDF artifact.
- Reviewed committed diffs for all June 17 Shop commits to verify the worklog reflects the actual checked-in project state.

Files Touched / Added During June 17

- Generated artifact: alla_vostra_worklog_june15.pdf.
- Primary Shop implementation: mob/app/shop.js.
- Primary Shop styling: mob/styles/shopStyles.js.
- Product copy: mob/app/products.js.
- This final worklog generation creates alla_vostra_worklog_june17.pdf at the repository root.

Important Follow-Up Context

- The cart-placeholder button next to Go back is still visually present but functionally inactive; future work can connect it to a cart count, drawer, checkout view, or backend-backed payment flow.
- The Piccola quantity UI is intentionally experimental and product-specific. Generalizing it globally should wait until the final Piccola interaction model feels right.
- The quantity controls mix three visual strengths: full black bordered buttons, hairline low-visibility number box, and muted zero-state triangles. Keep that hierarchy in mind before changing individual pieces.
- SVG triangles solved the uneven-border problem and should be preferred over border-triangle hacks for future triangle controls.
- The top plus/check box now carries confirmation state only in the frontend. It does not yet update a real cart or payment payload.
- Future backend/payment work can use these visual states as the frontend contract: quantity, confirmed selection, cart placeholder, and eventual checkout action.

Output Artifact

- Created this worklog PDF: alla_vostra_worklog_june17.pdf.
- No external PDF package was installed; this artifact was generated with a small standard-library PDF writer in the same plain-text-readable spirit as the prior daily worklogs.
