

Alla Vostra Mobile App Work Log - June 21, 2026

Compiled summary for Sunday, June 21, 2026 - focus: Shop palette refinement, cart overlay active-item ordering, Add items cart-overlay affordance, and SoFlo preview-image color fills.

Generated automatically on June 21, 2026 after reviewing the June 18 and June 19 worklog PDFs, the June 21 Git commit chain, current mobile Shop/cart source files, local parser checks, image-asset previews, and the clean working tree state before this artifact was created.

Includes tracked Git work from commits e348dfb, bb1c486, 2282a7f, and 8ea7207, which together refined the Shop/cart experience and made the SoFlo preview illustration visually consistent with the other Shop screen artwork.

Source Materials Processed

- Read the June 18 and June 19 root-level PDF worklogs with pdftotext to preserve the established title cadence, source-material section, compact bullet style, validation section, follow-up context, and output-artifact close.
- Reviewed the June 21 Git history from commit e348dfb through 8ea7207, including timestamps, commit messages, file lists, and patch stats for palette, cart ordering, Add items, and SoFlo image work.
- Checked current source hotspots in mob/app/shop.js, mob/styles/shopStyles.js, and mob/styles/stickyCartStyles.js for the shopping colors, cart overlay rendering, button geometry, and sticky-cart badge styling.
- Inspected mob/soflo_square.png through generated cream/white matte previews and magnified crops so the color fills could be documented as asset-level work rather than source-code-only work.
- Confirmed the working tree was clean before creating this artifact, so the implementation state described here reflects the committed June 21 baseline before this PDF was added.
- Used pdftotext, git log, git show --stat, git status, rg, sed, node --check, git diff --check, file, and a small pngjs-based local preview workflow; no external PDF or image package was installed.

Current Baseline to Preserve

- Primary app work remains in /Users/prahlin/alla_vostra/mob, with Expo Router and React Native as the mobile runtime surface.
- The Shop screen still uses the premium orange/cream overlay shell, rounded black-bordered frame, orange top and bottom bands, hairlines, product-entry overlays, and a separate cart overlay mode.
- Shopping/cart state remains shared through the existing context introduced earlier, while the June 21 work refined how selected items appear and how users return from cart view to product selection.
- The cart overlay now intentionally packs active products from left to right. This updates the June 19 fixed-slot behavior after the desired UX changed to avoid gaps when left or middle items are removed.
- Checkout remains visual-only. June 21 added a clearer Add items path back into product selection, but did not connect a backend payment processor, order endpoint, or checkout route.

Main Goals We Worked Toward

- Replace basic red and green shopping colors with more premium shades that fit the Alla

Vostra visual language.

- Keep the cart overlay organized after item removal by allowing only four possible product-column states: empty, left only, left plus middle, or left plus middle plus right.
- Add a clear cart-overlay control for users who enter the cart directly and need an obvious way to add more items.
- Bring the SoFlo preview image closer to the polish of the other Shop preview images by filling key closed shapes with the established red, yellow, and white treatments.

Work Completed - Shopping Color Palette

- Replaced the prior red and green shopping colors with the agreed premium values: green #247C3A, red #B91F18, and muted/tapped green #92BE9D.
- Applied the new green to shopping-related positive actions, including the product ADD button and sticky-cart badge styling.
- Applied the new red to shopping-related remove/destructive states, including the cart overlay minus/remove button family.
- Preserved the existing white, cream, black-border, gray hairline, and orange band system while changing only the shopping-related red/green accents.
- Kept the palette update small and targeted: mob/app/shop.js, mob/styles/shopStyles.js, and mob/styles/stickyCartStyles.js changed only by the color substitutions needed for the new look.

Work Completed - Cart Overlay Active-Item Ordering

- Changed the cart overlay product-column render path from fixed product identity slots to rendering overlayCartProducts directly.
- Preserved the three-column sizing math, so active products still occupy one-third column widths rather than expanding to fill the entire row.
- Made active products pack left in cart order: one product appears in the left column, two appear in the left and middle columns, and three appear in left, middle, and right columns.
- Removed the gap-producing behavior where a deleted left or middle product could leave an empty reserved slot while later products stayed in their original columns.
- Kept empty-cart behavior intact: when overlayCartProducts is empty, the empty cart message appears and product dividers do not render behind it.
- Left receipt/billable-product logic separate from visible product-column layout, so fee, tax, total, and summary rows continue to follow their existing cart-state rules.

Work Completed - Cart Overlay Add Items Button

- Added a green Add items button inside the cart overlay cream area as an explicit way to return to product selection from the cart view.
- Placed the button in the lower-right/right-column area above the white receipt banner, using absolute positioning so it does not reshuffle cart product columns.
- Aligned the Add items button right edge with the Checkout button right edge, then matched the Checkout button dimensions at 111px wide by 55.5px tall.
- Reused the established ADD-button visual language: green fill, white text, rounded corners, thick black border, and the shared button shadow plate.
- Added showProductOverlayFromCart so tapping Add items prunes zero-quantity cart entries and switches from cart overlay mode back to the product overlay without closing the whole Shop overlay.
- Kept Go back behavior and cart-button behavior intact while giving direct-cart users a clearer path into choosing products.

Work Completed - SoFlo Preview Image Color Fills

- Updated mob/soflo_square.png directly as the active Shop preview asset, preserving its

existing file path and 516x516 RGBA PNG format.

- Filled the sun face with the exact yellow sampled from the bargain image coins: #FFD700.
- Filled only the closed interior flag pocket with the agreed red #B91F18 after correcting an earlier outside-flag fill attempt; the surrounding open space was restored.
- Filled the lower-left building body with white while preserving its black outlines, windows, roof strokes, palm silhouettes, and surrounding transparent/cream background.
- Filled the taller right building body with white while preserving balcony/window strokes, black outlines, and the visible yellow sun. The fill intentionally covers transparent building-body regions that sit behind the sun overlap without painting over the sun or black pixels.
- Used local pngjs-based previews on cream and white mattes plus zoomed crops to verify the line-art fills before saving the final asset.

Validation and Checks Performed

- Ran node --check mob/app/shop.js after the cart ordering and Add items interaction work.
- Ran node --check mob/styles/shopStyles.js after the Add items style additions and shopping-color refinements.
- Ran node --check mob/styles/stickyCartStyles.js after the sticky cart green badge color change.
- Ran git diff --check before generating this artifact; no whitespace or patch-format issues were reported.
- Verified mob/soflo_square.png stayed a 516x516, 8-bit RGBA, non-interlaced PNG after the image edits.
- Reviewed generated matte previews for the SoFlo asset to confirm the sun, flag, both buildings, and black line art read correctly against the app-like cream background.

Files Touched / Added During June 21

- Primary Shop implementation: mob/app/shop.js.
- Primary Shop styling: mob/styles/shopStyles.js.
- Sticky cart styling: mob/styles/stickyCartStyles.js.
- Shop preview artwork: mob/soflo_square.png.
- This final worklog generation creates alla_vostra_worklog_june21.pdf at the repository root.

Important Follow-Up Context

- Cart product columns now pack left by active cart order. Future work should preserve the four allowed cart looks unless the desired cart layout changes again.
- The Add items button is intentionally a cart-to-product-selection affordance, not a checkout action. Checkout still remains the separate visual placeholder in the white receipt area.
- The shopping palette has now settled around #247C3A and #B91F18. Future red/green shopping UI should reuse those values unless there is a deliberate palette revision.
- The SoFlo artwork is now a manually pixel-edited transparent PNG. Future recolors should continue using controlled local masks or carefully inspected previews to avoid filling open background regions.
- Because the tall building fill interacts visually with the yellow sun overlap, future edits near that corner should preserve the visible sun and black sun strokes while allowing the building fill to sit behind it.

Output Artifact

- Created this worklog PDF: alla_vostra_worklog_june21.pdf.

- No external PDF package was installed; this artifact was generated with a small standard-library PDF writer in the same plain-text-readable spirit as the prior daily worklogs.
