

Alla Vostra Mobile App Work Log - August 1, 2026 (Part 1)

Compiled summary for Saturday, August 1, 2026 (Part 1) - focus: Android Small and Large overlay/splash polish, startup and question-mark guide parity, confirmation-screen rate CTA rollout, Play Store ASO and asset submission work, app-icon and feature-graphic finalization, closed testing Alpha release 1.0.1 build preparation, EAS archive correction, and Google Play review submission for Alla Vostra.

Generated in continuity with the established Alla Vostra worklog cadence: compact opening summary, source-material review, baseline, goals, grouped work-completed sections, validation, files touched, follow-up context, and output-artifact close.

This artifact is named `alla_vostra_worklog_august1_part1.pdf` because the repository U.S. Eastern-time clock used for generation was Saturday, August 1, 2026, and no earlier August 1 worklog PDF existed. It records the work window after `alla_vostra_worklog_july31.pdf` and commit `0f218c9`, through the current committed source state at `87269a8`.

Source Material Reviewed

- Reviewed all 50 pre-existing root-level Alla Vostra worklog PDFs from May, June, and July to preserve the project naming convention, section order, letter-size PDF output, bullet-heavy implementation notes, validation language, files-touched detail, and output-artifact close style.
- Ran the current project overview script and refreshed the generated app/web snapshots, then read the snapshot headers and current tree context to confirm the Aug 1 state still centers on the mobile app, Play Store assets, closed testing bundles, and root-level documentation artifacts.
- Extracted recent PDF text and metadata from July 30 and July 31, with July 25 and July 28 Part 2 used as additional anchors for longer Play Store / mobile release documentation rhythm.
- Reviewed the Aug 1 commit chain after the July 31 worklog: `4cbe5ab` Tuned Android overlay layouts and guide screens; `330d02b` Matched Android splash bars and added Play Store rating CTA; `d13aaa0` Updated Play Store visuals and app icon branding; `87269a8` Prepared Play closed testing release 1.0.1.
- Compared the source window `0f218c9..HEAD` with git diff name/status and targeted diffs for the Android overlay code, store asset generator, native theme plugin, app version metadata, and EAS ignore rules.
- Reviewed the tester-community / production-access feedback items that were discussed during the session: ASO discoverability, onboarding clarity, screenshots, rating prompt, support/security reassurance, feedback loop, social sharing, and promotions or offers.
- Reviewed the local Play Store launch checklist and release context enough to distinguish closed testing Alpha work from production release readiness, including the continuing preview/test-mode payment posture.
- Used the user-provided Play Console screenshots as the record for the saved and submitted Google Play state: closed testing Alpha release 1.0.1, store-listing changes, icon, screenshots, and feature graphic changes all moved into review.

Baseline Status Before August 1 Part 1

- July 31 had added splash-driven onboarding, five bubble guide overlays, a swipe-left animatic, splash-specific presentation mode, and a Got It action that could transition users into the app after startup.
- The guide system existed, but Android Small and Android Large still needed device-specific polish: product overlay image scale, native toolbar/status-bar color, overlay vertical centering, guide asset distribution, and help-overlay parity with splash startup screens.
- The product overlay on Android Large was visually acceptable except the cheeseboard imagery needed more presence inside the cream product card.
- Android Small had several visual mismatches: a white native top-toolbar rectangle, guide

stacks too high or too close to the lower controls, shop-preview horizontal image stacks that read too large, and question-mark guide screens that did not yet match startup splash overlays.

- The confirmation/Thank You overlay did not yet include a rate-on-Google-Play prompt, even though the tester feedback and Play Store readiness work called out ratings/reviews as part of the post-order loop.
- The Play Store listing still needed more searchable metadata, polished final screenshots, a feature graphic that satisfied Play Console size/format rules, and a simplified app icon suitable for the Play listing.
- Closed testing Alpha already had release 1.0.0/versionCode 1 active from July 18, and the user was approaching day 13 of the 14-day testing window for the tester community track.
- The package name remained com.allavostra.app, and the Play track strategy remained continued closed testing rather than creating a separate beta-style public channel.

Goals for August 1 Part 1

- Tune Android Large and Android Small overlay layouts while preserving the already-approved shop, onboarding, and bottom-nav visual language.
- Keep Android Small guide overlays visually identical whether reached during startup splash onboarding or later through the question-mark help button.
- Center Small product and guide overlays between the top app header stack and the bottom nav button stack, matching the visual balance already achieved on Android Large.
- Add a small, tasteful Rate Alla Vostra on Google Play graphic/button to the confirmation overlay without crowding the Thank You screen on either Android viewport.
- Translate the tester feedback around metadata and discoverability into a tasteful Play Store app name, short description, full description, app icon, screenshot set, and feature graphic.
- Generate a new Play-uploadable Android App Bundle with version 1.0.1/versionCode 2 for the same closed testing Alpha community track.
- Resolve any build packaging failures caused by the new font/icon/store asset work before the bundle reached Play Console.
- Document the source and release state honestly, especially what was polished for closed testing versus what still needs production Stripe/Postmark/environment smoke testing before public launch.

Work Completed - Android Overlay and Splash Layouts

- Enlarged the Android Large product overlay cheeseboard imagery by 30 percent across the requested 10 percent passes, improving the product card presence while keeping surrounding ADD, price, description, and counter controls intact.
- Booted and used Android Large and Android Small AVDs side by side so layout decisions were made from live device screenshots rather than only from code inspection.
- Fixed the Android Small native toolbar/status area mismatch by making the Android status bar translucent and removing the extra header-overlap behavior that produced the awkward white landscape rectangle above the orange header.
- Restored the Small product overlay vertical placement so the overlay sits centered between the upper app header region and the lower Products/nav control row, matching the Large reference balance.
- Matched Android Small splash background behavior to Android Large by updating status/nav bar orange handling and preserving that color through the Expo Android navigation-bar configuration and custom Material Components theme plugin.
- Reduced the three horizontal image stacks on the Small shop-preview screen by 5 percent so the preview composition fits better below the header and above the bottom controls.
- Reworked the Android Small five-step splash/bubble overlay stacks with 10 percent smaller guide assets where needed, an invisible 20 px bottom padding buffer, and evenly redistributed vertical spacing for bubble, text, image, animation, and button regions.

- Matched the five question-mark guide overlays on Android Small to the startup splash overlays: no orange overlay banners, same core asset sizes, same padding model, and the same centered stack behavior between app header and bottom nav controls.
- Adjusted the swipe-left animatic so its hand could stay visible between animation passes on Small, preserving the tutorial signal without making the bottom area feel jammed.

Work Completed - Rate CTA and Confirmation Overlay

- Discussed the Android rating best-practice path: an app can either use the Google Play in-app review API or open the Play Store listing/review surface, with the Play Store path being the practical choice for this visual CTA pass.
- Produced three Rate Alla Vostra mockup options, selected version 1, and previewed it inside the final confirmation pop-up / Thank You overlay before turning it into app code.
- Implemented a tappable Rate Alla Vostra on Google Play button in the confirmed-order overlay for Android Small first, then enabled the same CTA for Android Large after visual approval.
- Built custom inline star and Google Play triangle SVG icons inside the React Native button so the graphic did not depend on an external image asset for the live app UI.
- Wired the rating CTA to open `market://details?id=com.allavostra.app&showAllReviews=true` on Android, with an HTTPS Google Play listing fallback when the market URL cannot be opened.
- Adjusted confirmation overlay pointer handling so the button remains pressable after the order placement is confirmed while preserving non-interactive behavior for the rest of the decorative popup layer.
- Styled the rate prompt as a compact bottom element that fits under the Alla Vostra Thank You branding without overpowering the confirmation copy or disrupting the existing orange/cream overlay style.

Work Completed - Startup, Question Help, and Device Chrome Parity

- Kept splash onboarding as its own presentation mode while allowing Android Small question-mark help overlays to reuse startup-guide visuals for visual parity after the app is already running.
- Removed the orange guide chrome bands from Android Small help overlays by treating Small help as startup-style guide visuals, while keeping non-Small/product overlay chrome behavior separate.
- Introduced Small-specific guide-bottom padding and usable-height calculations so the final animations and Got It style button are not too close to the bottom of the overlay frame.
- Scaled guide bubbles, labels, chevrons, swipe animatic, ADD/counter/payment/delivery visuals, and Got It dimensions through Small-specific multipliers instead of hand-editing every slide independently.
- Kept non-Small guide and shop overlay behavior protected through viewport checks, making the Small refinements targeted rather than global.
- Updated responsive layout helpers so Large Android and Small Android can make different decisions for product imagery, guide scaling, and overlay centering without fighting the shared source components.

Work Completed - Play Store Metadata and ASO

- Revisited the production-access / tester-community feedback and identified ASO metadata and discoverability as the immediate Play Store work item, rather than treating the feedback as only a UI polish list.
- Recommended changing the Play Store title from Alla Vostra to Alla Vostra Grazing Boards, staying under Google Play's 30-character title limit while adding the searchable category phrase.
- Recommended the final short description: Order handcrafted grazing boards for South Florida celebrations. This keeps the local/service intent searchable inside the 80-character limit.

- Recommended a full description centered on hosting, handcrafted grazing boards, delivery details, secure ordering, card/Google Pay/PayPal availability where supported, and easier South Florida entertaining.
- Clarified wording/spelling choices during listing entry, including charcuterie, grazing board as two words for normal search/user comprehension, and how the app title should remain tasteful rather than keyword-stuffed.
- Guided Play Console navigation from the current Grow users / Store presence area to the default store listing settings in the newer UI, using the user's screenshots rather than relying on old navigation labels.
- Advised on the AI asset declaration decision: raw app screenshots are not AI-generated simply because Codex helped implement the app, while AI-assisted/edited marketing graphics should be labeled when Play asks for individual asset labeling.
- Guided the user through saving the default store listing and then submitting the pending changes from Publishing overview after the listing and release updates were ready.

Work Completed - Store Screenshots and Feature Graphic

- Moved Play Store images 1-5 from the mockups/output area into the final screenshot folder so the final assets are collected in the upload-ready location.
- Trimmed 10 percent from both left and right margins of Play Store images 2-5, creating trim-lr10 final variants while keeping their screenshot-friendly 1536 x 1080 canvas size for the phone screenshot slots.
- Clarified the difference between the feature graphic and the first phone screenshot: the feature graphic is a 1024 x 500 promotional banner area, while phone screenshots are app-screen captures or styled screenshot composites for the device screenshot gallery.
- Reworked playstore1.png for the feature graphic path by scaling down the foreground asset stack by 10 percent, moving the device-frame/screenshot stack down 50 px and then 10 px more, and replacing the orange underlay with a smoother extended gradient that fills the 1024 x 500 area without clipping device frames.
- Saved the approved feature graphic back into docs/play-store/screenshots/final/playstore1.png and synced the same final visual into mob/assets/store/feature-graphic.png for source-of-truth consistency.
- Created additional Play Console upload variants after the console complained the first asset was too small: 1024 x 500 clean PNG/JPG uploads and a 1920 x 1080 screenshot-safe fallback version.
- Updated docs/play-store/screenshots/mockups/generate-feature-graphic.js with controls for foreground scaling, transparent foreground output, and expanded upload variants, so future feature-graphic regeneration can reproduce the Aug 1 layout choices.
- Updated the raw Android Large orange gradient source used by the Play Store graphics so the store artwork and app splash background family stayed visually aligned.

Work Completed - App Icon Branding

- Redesigned the Play Store app icon away from the earlier AV plus small Alla Vostra text treatment, removing the tiny brand name to improve legibility at Play Store icon sizes.
- Iterated the AV lettering through several correction passes: moved the letters closer to center, tested scale changes, reverted the distorted downsizing attempt, removed the stroke, checked whether the face was really Dream Avenue, and then matched it more closely to the app's official Alla Vostra wordmark look.
- Kept the final icon as AV letters only, using Dream Avenue styling, no stroke, a font-weight target of 650 after 700 was judged too heavy, and adjusted letter spacing/position so the pair sits centered and slightly lower as requested.
- Regenerated the 512 x 512 store app icon and 432 x 432 adaptive foreground asset, then synced the SVG and PNG sources used by the Play Store listing and Android native icon pipeline.
- Preserved the launcher/display name in app.json as Alla Vostra while changing the Play

listing title to Alla Vostra Grazing Boards, keeping the on-phone icon label clean and short.

Work Completed - Closed Testing Build 1.0.1

- Bumped the mobile app version from 1.0.0 to 1.0.1 and Android versionCode from 1 to 2 in mob/app.json for the next Play upload.
- Kept the Android package name stable as com.allavostra.app so the new AAB continues the existing Play app record instead of creating a new app identity.
- Generated the second Play-ready closed testing Android App Bundle for continued Alpha tester rollout rather than creating a separate internal-only or beta track.
- Captured the failed first EAS attempt as a packaging problem: the cloud archive excluded assets/fonts/tt_fors/tt_fors_trial_black.ttf, which was required by the app.
- Fixed both root .easignore and mob/.easignore by removing the TT Fors Black font exclusion, then verified the EAS archive path included the required font before rebuilding.
- Completed the successful EAS playTest build for version 1.0.1/versionCode 2 and downloaded the artifact to dist/alla-vostra-play-test-v2.aab.
- Recorded the local AAB check: dist/alla-vostra-play-test-v2.aab is approximately 72 MB with SHA-256 22973fe5364749383172cd4351fc7ee18dafef98c8a3d51118e17f0f3a792284.
- Attempted EAS Submit automation, then switched to manual Play Console upload guidance after EAS required Google service account keys that were not configured for non-interactive submission.
- Guided the user to create a new release under the existing Closed testing - Alpha track, because the prior 1.0.0 release was already rolled out and the new AAB/versionCode needed a fresh release record on the same tester track.

Work Completed - Play Console Submission State

- Clarified that Closed testing - Alpha is the tester track name shown in Play Console, not a permanent public label that customers will see once the app is later released to production.
- Clarified that internal testing is best for very small fast smoke tests, while closed testing is the correct community/beta-style track for the user's ongoing tester group and production-access evidence.
- Added concise release notes for the 1.0.1 closed testing release: Updated app experience, Play Store assets, onboarding/help overlays, order confirmation rate prompt, and Android UI polish for continued closed testing.
- Confirmed the user saved the release, went to Publishing overview, and submitted seven changes for Google review: closed testing Alpha 1.0.1, app name, short description, full description, app icon, phone screenshots, and feature graphic.
- Clarified that Changes in review means Google is reviewing the submitted release/listing changes, not that testers are manually reviewing them inside Play Console.
- Clarified that testers may not receive an automatic push-style notification merely because the Play Console review was submitted; once approved and available, the update appears through Play Store update mechanisms or direct communication to the tester community.
- Advised that the 14-day closed-testing clock should continue with the same closed testing Alpha track and that uploading 1.0.1 as a new release on that track does not, by itself, restart the entire tester program from scratch.

Validation and Checks Performed

- Used live Android Small and Android Large AVD restarts, side-by-side views, screenshots, and user review to validate the overlay positioning, splash orange blending, question-guide parity, shop preview scale, and confirmation rate prompt placement.
- Verified that the Small white native-toolbar mismatch was addressed through Android status/navigation bar configuration and the custom Material Components theme plugin rather

than by adding a cosmetic in-app cover layer.

- Checked store-image dimensions with local image tools, including playstore1.png and the clean feature graphic at 1024 x 500, feature-graphic-as-screenshot at 1920 x 1080, app-icon.png at 512 x 512, and adaptive-foreground.png at 432 x 432.
- Verified the app version and Android versionCode in mob/app.json after the release bump.
- Verified the required TT Fors Black font remained included after the .easignore correction, addressing the EAS cloud archive failure.
- Verified the local AAB artifact exists at dist/alla-vostra-play-test-v2.aab and recorded its SHA-256 checksum for future release traceability.
- Confirmed the root worklog set contained no August 1 PDF before generating this Part 1 artifact.
- Confirmed the current source state before worklog generation was clean at HEAD 87269a8; the later snapshot modifications are from this documentation pass running read_project.sh, not from new app behavior changes.

Files Touched During August 1 Part 1

- mob/app/_layout.js - adjusted Android splash/status presentation behavior and kept splash overlay timing aligned with the updated guide presentation.
- mob/app/shop.js - increased Large product overlay imagery, reduced Small shop-preview image stacks, added Android Play Store rate CTA handling, linked market/web fallback URLs, and rendered the confirmed-order rate button.
- mob/components/QuestionOverlay.js - added Small Android guide scaling, bottom padding, startup/help visual parity, no-banner Small presentation behavior, vertical centering math, and guide stack distribution changes.
- mob/components/SwipeLeftAnimatic.js - tuned hand/swipe visibility timing so the Small guide animation remained readable between passes.
- mob/styles/shopStyles.js - added confirmation rate button styles and mirrored the product/shop-preview scaling changes used by the live overlay components.
- mob/utils/platformLayout.js and mob/utils/responsiveLayout.js - added or adjusted viewport helpers for Small/Large Android decisions.
- mob/plugins/with-android-material-components-theme.js - preserved transparent status and matched navigation/status bar color behavior through native Android theme generation.
- mob/app.json - bumped version to 1.0.1, Android versionCode to 2, and updated Android navigation-bar orange values for Small/Large splash parity.
- .easignore and mob/.easignore - stopped excluding the TT Fors Black font needed by the EAS Android bundle.
- docs/play-store/screenshots/final/* - added final feature-graphic variants, trimmed screenshot variants, final playstore1.png, playstore3 move from mockups/output, clean upload files, and screenshot-safe fallback graphics.
- docs/play-store/screenshots/mockups/generate-feature-graphic.js and mockups/output/* - updated the feature-graphic generator and saved intermediate foreground/asset-scale outputs for reproducible store artwork.
- docs/play-store/screenshots/raw/Android_Large/alla_vostra_orange_gradient_1920x1080.png - refreshed the gradient source used by the Play Store graphic family.
- mob/assets/store/app-icon.png, app-icon.svg, adaptive-foreground.png, adaptive-foreground.svg, and feature-graphic.png - updated final store icon, adaptive icon foreground, and in-app/source feature graphic assets.
- alla_vostra_APP_PROJECT_SNAPSHOT.txt and alla_vostra_WEB_PROJECT_SNAPSHOT.txt - refreshed generated project snapshots during the Aug 1 source work and again during this worklog preparation pass.
- other/.DS_Store and other/assets/.DS_Store - incidental macOS metadata binary changes were present in the Aug 1 source window; they do not represent functional app behavior.

Follow-Up Context

- The current Play Console state after user submission is Changes in review for the 1.0.1 closed testing Alpha release and the associated default store-listing asset/metadata updates.
- The public production release, when eventually approved and rolled out to production, will appear as a normal Play Store app release; Alpha/Beta wording is track terminology, not the customer-facing launch label.
- Because managed publishing was off in the Play Console screenshot, approved changes are expected to publish automatically once Google completes review unless the console state changes before approval.
- No Stripe payment endpoint, Postmark email webhook, server checkout route, PayPal back end, or production EAS environment variable path was modified in this Aug 1 Part 1 window.
- Before production release, the next practical review pass should still include a payment smoke test, order confirmation email/Postmark path check, support/contact link check, privacy/data-safety consistency check, and production-vs-preview environment verification.
- The 1.0.1 bundle is suitable for continuing closed tester feedback on UI polish, onboarding/help, confirmation CTA, and Play listing presentation, but it should not be treated as the final production-readiness audit by itself.
- The current committed source state for this worklog is 87269a8, with the root PDF generated afterward as a documentation artifact.

Output Artifact

- Generated the August 1 Part 1 worklog in the established Alla Vostra root-level PDF style after reviewing the full pre-existing PDF worklog set and recent source/release commits.
- Rendered as a letter-size PDF with the same title rhythm, compact narrative, grouped implementation sections, validation list, files-touched detail, follow-up context, and output-artifact close used by the latest project logs.
- Location: repository root, alongside the existing May, June, and July Alla Vostra worklog PDFs.
- Generated worklog artifact: `alla_vostra_worklog_august1_part1.pdf`
