

Alla Vostra Website Work Log

Compiled summary for May 18, 2026 - focus: shop-page thin/mobile shipping visuals, generated PNG icon set, split CSS structure, and non-thin shipping layout refinement.

Note: the naming convention follows the May 11, May 13, May 15, and May 16 reference files: `alla_vostra_worklog_may18.pdf`. This report records yesterday's accepted direction and the latest working scripts from the shop-page session.

Current Baseline to Preserve

- Work continued inside the desktop / other folder only. The shop page must keep , the `#site-header` mount, and `assets/js/header.js`.
- The split CSS structure is now the preferred project structure. `shared.css` should import page/component styles, with `aboutus.css` as the correct About page stylesheet name going forward.
- The shop page remains connected to `assets/css/shared.css` from the HTML, while the shop-specific layout lives in `other/assets/css/shop.css` through the shared import chain.
- Thin/mobile behavior is now special for the shop page: only the orange header banner remains; the white mobile nav bar and `background3.png` hero are hidden on the shop page in thin mode.
- The shop shipping section now uses three black line-art PNGs: `truck1.png`, `bargain.png`, and `soflo.png`, all in `other/assets/images/`.
- Thin/mobile keeps the vertical stacked image/button system; thin-medium, wide-medium, and wide use a two-column visual pairing for the top two shipping promises plus a centered South Florida image.
- The final `shop.html` text changed from Always: to With Alla Vostra, you can count on..., and the first two orange boxes read 12 hour / shipping and \$10 delivery / fee.

Main Goals We Worked Toward

- Create a cute, minimal black-and-white delivery icon system that matches Alla Vostra's simple, classy visual language.
- Add truck, bargain, and South Florida illustrations to the shop page without disturbing existing `header.js`, `shared.css`, product images, PayPal buttons, or responsive breakpoints.
- Keep the icons visible only in the intended responsive contexts: mobile stacked icons first, then later desktop/non-thin icon pairings.
- Improve the mobile shop experience by removing `background3.png` and the white top nav row only for the shop page, leaving the orange brand banner in place.
- Replace the underlined Always: label with a romantic, feminine heading using Cormorant Garamond Italic.
- Rework non-thin shipping boxes so the orange boxes and illustrations align to the wider product-grid rhythm instead of staying as one narrow centered stack.
- Keep the product grid intact: three products horizontally outside thin/mobile; one stacked column in thin/mobile.

Attempts Made / Work Completed

Work item	Purpose	Result / note
truck1.png generation	Create a simple, cute, fast delivery symbol.	After several image-generation passes, the final direction became a minimal black/transparent PNG: a cute speeding truck, matching the stick-figure simplicity requested.
Truck insertion in shop.html	Place the delivery truck above the 12 hour shipping button.	The final mobile insertion uses a crop wrapper outside the button, not inside the orange pill, and only appears in thin/mobile mode.

Work item	Purpose	Result / note
Current-folder correction	Avoid editing the wrong root copy of shop.html.	Project scope was corrected to other/shop.html and assets under other/assets/. This is a critical future guardrail.
CSS split	Break shared.css into separate files using best-practice naming.	The split stylesheet approach was adopted. The About page stylesheet name is aboutus.css, not about.css.
bargain.png generation	Represent \$10 delivery fee as inexpensive/worthwhile, without clutter.	Several concepts were simplified until the final black transparent image conveyed a bargain using a tag/gift/great-value style. It replaced the middle truck image.
bargain.png transparency and crop tuning	Make the file usable as a PNG on the cream background.	The image was made transparent and visually resized; later desktop trimming was handled in CSS through clipping rather than by resizing the displayed art.
soflo.png generation	Represent M. Dade/Broward / South Florida delivery area.	The first preferred image was retained and the unwanted black background was removed, producing a transparent black line-art South Florida building/palm icon.
Mobile shop header cleanup	Remove background3.png and the white nav bar on the thin shop page.	The shop page body class enabled shop-only CSS hiding of .nav-mobile, .hero, .hero-image, and background3 image references in thin mode, while preserving the orange banner.
Shipping headline font	Make With Alla Vostra feel romantic and classy.	Cormorant Garamond Italic was selected and added through base.css / imported font loading.
Plus sign redesign	Make the plus sign larger and cuter.	The plus glyph was replaced with a custom rounded plus made from ::before and ::after bars, avoiding sharp font-corner geometry.
Non-thin shipping layout	Use horizontal balance in thin-medium, wide-medium, and wide.	The top shipping row pairs the 12-hour square with truck1.png; the fee row pairs bargain.png with the \$10 delivery square; the South Florida image sits between in and the M. Dade/Broward button.
Final trim approach	Trim displayed artwork without changing visual size.	Latest CSS uses clip-path to trim bargain.png 10% on both left/right and soflo.png 20% top/bottom while preserving displayed image dimensions.

Important Final Values / Behaviors

- Shop page body class: . This is required for shop-only thin/mobile header hiding.
- Final shop headline: With Alla Vostra, you can count on...
- Final mobile vertical shipping order: truck1.png, 12 hour shipping, rounded +, bargain.png, \$10 delivery fee, bold in, soflo.png, M. Dade/Broward !.
- Thin/mobile: .shop-page-body .nav-mobile, .hero, .hero-image, and background3 image references are hidden; .page-title is also hidden on the shop page.
- Thin/mobile shop-main margin-top: 52px after the hero was removed from that page context.
- Non-thin square orange boxes: width min(270px, 100%), aspect-ratio 1 / 1.
- Non-thin shipping stack: width min(760px, 86%) by default; wide-medium and wide override to width: 100%.
- Desktop/non-thin icon sizing: general desktop art image 270px; desktop bargain image 405px; desktop soflo image 1080px.
- Latest visual trim method: bargain uses clip-path: inset(0 10% 0 10%); soflo uses clip-path: inset(20% 0 20% 0).
- Mobile icon crop wrappers remain 330px x 198px, with mobile-specific transforms preserved from earlier tuning.

What We Learned Yesterday

- Do not use wrapper width/height changes when the user asks for trimming but not resizing. clip-path is safer because it can hide edge whitespace without changing the element's displayed dimensions.
- Thin/mobile and non-thin need separate image systems. Mobile wants vertically stacked icon/button/icon/Button rhythm; wider layouts can use two-column pairings.

- Transparent PNGs need actual alpha transparency, not white pixels. This matters because the icons sit on the cream site background and must not appear as boxes.
- Generated images should be checked in context. The South Florida image looked correct as a standalone preview but needed transparency cleanup and major scaling after being placed in the shop layout.
- The user's "outside the button" instruction is structural, not just visual. Images must be separate elements outside orange pill divs.
- When changing shop.html, always preserve the header.js and shared.css references. Earlier accidental removals caused immediate regressions.
- The CSS split means future pfs requests may need multiple files: shop.html, shop.css, and sometimes base.css/shared.css import sections.

Complaints / Constraints to Remember Going Forward

- Stay inside /Users/prahlin/Desktop/alla_vostra/other unless explicitly told otherwise.
- Do not remove the shared header mount, header.js script, or shared.css link from pages using the shared system.
- When the user says pfs, print the full relevant script, not only snippets. If multiple files changed, print all relevant full files.
- Do not let thin-only shop/mobile rules bleed into thin-medium, wide-medium, or wide unless explicitly requested.
- Do not put the icon images inside the orange shipping buttons; they belong outside the pills.
- Do not change image sizes when asked only to trim whitespace. Use clip-path or equivalent masking instead.
- Do not rename aboutus.css back to about.css. The accepted filename is aboutus.css.
- Avoid changing unrelated product cards, payment links, product image paths, fonts, colors, or breakpoints during shipping-section work.

Best Next Approach From the May 18 Baseline

- Start by confirming the latest shop.html and shop.css match the Appendix A and Appendix B baselines in this report.
- Visually test four widths before any new shop edits: thin, thin-medium, wide-medium, and wide.
- In thin/mobile, confirm only the orange banner remains above the shop content and the page-title Shop is hidden.
- In non-thin widths, confirm the 12-hour box aligns left, the truck aligns right, bargain aligns left, \$10 delivery aligns right, and soflo is centered between in and the M. Dade/Broward button.
- If trim still looks wrong, adjust clip-path percentages first, not image width or wrapper dimensions.
- Once the shipping section is visually locked, consider a production cleanup pass that removes any remaining debug borders or unused temporary files.

Appendix A - Final May 18 other/shop.html Baseline

This records the shop.html structure after the final accepted text changes and after desktop/non-thin image pairings were added.
