

Alla Vostra Mobile App Work Log - September 24, 2026

Compiled summary for Thursday, September 24, 2026 - focus: verified U.S. Eastern-time date handling, full pre-existing worklog review, App Store Connect distribution completion, App Information cleanup, content-rights confirmation, age-rating questionnaire completion, pricing and U.S.-only availability confirmation, iOS App Store screenshot preparation, privacy policy publication, app privacy data-label completion, version metadata entry, build selection, App Review notes and contact information, final Add for Review troubleshooting, and successful submission of iOS App 1.0 with build 1.0.4 (2) to Apple App Review for Alla Vostra.

Generated in continuity with the established Alla Vostra worklog cadence: compact opening summary, source-material review, baseline, goals, grouped work-completed sections, validation, files and artifacts touched, external account/device context, follow-up context, and output-artifact close.

This artifact is named `alla_vostra_worklog_september24.pdf` because the verified repository U.S. Eastern-time date used for generation was Thursday, September 24, 2026. The Eastern date was checked locally with `TZ=America/New_York` date, which reported Thursday, September 24, 2026 at 7:56:09 PM EDT during the generation window. The date is recorded in U.S. Eastern time rather than silently following UTC or a later calendar date elsewhere.

This PDF records the work window after `alla_vostra_worklog_september23.pdf` and the prior iOS TestFlight, Apple Pay, Stripe webhook, Postmark, and Android APK readiness work. It extends the project record through commit 2272412 Prepared App Store submission assets and privacy policy, the completed App Store Connect privacy publication, and the final App Store Review submission confirmation showing 1 Item Submitted for iOS App 1.0, build 1.0.4 (2).

Source Material Reviewed

- Reviewed all 68 pre-existing root-level Alla Vostra PDF worklogs from May, June, July, August, and September before drafting this September 24 artifact, preserving the established naming pattern, letter-size PDF output, title cadence, opening summary, source-review wording, grouped implementation sections, validation language, files/artifacts inventory, device/account context, follow-up cadence, and output-artifact close.
- Extracted the complete root-level worklog set with `pdftotext` and confirmed the study pass covered 68 PDFs, 20,391 extracted text lines, and 155,858 extracted words before this worklog was generated.
- Used `alla_vostra_worklog_september23.pdf` as the immediate continuity anchor because it documented the App Store Connect, TestFlight, Apple Pay, Stripe webhook, Postmark, Vercel, and Android readiness state inherited by the September 24 submission session.
- Rechecked the September 17, September 15, and September 12 worklogs as the nearest store-submission, payment, privacy, screenshot, QA, and device-context anchors because today relied on the same distinction between submitted artifacts, local verification, store metadata, and external account state.
- Reviewed the current Git history and repository status, including commit 2272412 Prepared App Store submission assets and privacy policy, so the worklog could describe the committed App Store screenshot package and privacy policy additions accurately.
- Reviewed the generated App Store screenshot set under `screenshots/app-store/ios-6-5`, the root `privacy.html` policy page, the App Store Connect screens supplied during the session, and the final Apple submission confirmation state.

Baseline Status Before September 24

- The corrected iOS TestFlight binary, Alla Vostra 1.0.4 build 2, had already been uploaded,

- processed, installed, and tested on the physical iPhone during the September 23 work window.
- Apple Pay had already been proven through the TestFlight sandbox path with Stripe, webhook delivery, merchant notification, and customer confirmation emails all verified.
 - App Store Connect still required distribution metadata and compliance work before Apple review could start: content rights, age ratings, pricing, availability, screenshots, description, keywords, support URL, copyright, build attachment, review notes, and App Privacy.
 - The app was intended for U.S.-only availability and free download pricing, with physical goods ordered through the app and delivered outside the app.
 - The user wanted App Store screenshot assets prepared from the connected iPhone or iPhone 17 Pro Max simulator, saved in the repo where appropriate, and uploaded in a curated five-image sequence.
 - The privacy policy URL and App Privacy labels were not yet accepted by App Store Connect, so Add for Review was expected to surface blocking issues until those were published.

Goals for September 24

- Complete App Store Connect's App Information setup for Alla Vostra without over-declaring third-party content, objectionable content, age-restricted material, medical content, gambling, or violence.
- Confirm that the app is free and available only in the United States while keeping the price schedule and availability state internally consistent for Apple.
- Prepare a clean iPhone 6.5-inch screenshot package with the requested substitutions: retain images 01, 03, and 05, replace image 02 with the Piccola product overlay, and replace image 04 with the successful order-confirmation screen.
- Add a plain privacy policy page to the repository and use <https://allavostra.com/privacy.html> as the App Store Connect privacy policy URL.
- Complete the App Privacy data-collection questionnaire honestly for Alla Vostra's order-processing flow while avoiding unrelated categories such as location services, health, user-generated content, diagnostics, identifiers, browsing history, or tracking.
- Fill the iOS version page with production-ready metadata, attach build 1.0.4 (2), enter App Review contact/review notes, resolve validation errors, and submit the version to Apple App Review.

Work Completed - App Information, Rights, Age Rating, and Pricing

- Completed the App Information review for Alla Vostra under Distribution, confirming the visible app name Alla Vostra, subtitle Grazing Boards Delivered, bundle ID com.allavostra.app, SKU EX1790206154480, and Apple ID 6815443745.
- Set Content Rights to No, this app does not contain, show, or access third-party content, which matches the app's own ordering, menu, copy, and generated brand/product imagery rather than third-party media access.
- Walked through the Age Ratings flow with all objectionable-content categories set to none or no: mature themes, sexuality/nudity, violence, weapons, chance-based activities, gambling, contests, loot boxes, health/wellness, medical/treatment, and made-for-kids flags.
- Confirmed the calculated App Store age rating as 4+, with regional display equivalents shown for Brazil, Korea, and Vietnam, and left Made for Kids, override age rating, and Age Suitability URL unset.
- Reviewed App Encryption Documentation language and preserved the prior Info.plist/App Store posture that the app only uses standard platform/network encryption and does not require custom encryption documentation.
- Opened Pricing and Availability, confirmed the intended U.S.-only availability, and verified the app availability summary as 1 Available and 174 Not Available.
- Created and confirmed a global price change to Free / \$0.00, clarifying that Apple's global price table still exists even when only the United States is selected for availability.

- Observed that the page-level Save button remained disabled after the free price confirmation because the confirmation itself had already applied the \$0.00 schedule; no extra pricing save was needed before returning to the iOS version page.

Work Completed - Screenshot Capture, Replacement, and Upload

- Prepared the App Store screenshot package for the iPhone 6.5-inch display target at 1284 x 2778 pixels, matching Apple's accepted dimensions for the upload bucket used on the version page.
- Saved the screenshot source package under screenshots/app-store/ios-6-5, with final PNG and final JPEG variants so the repository contains both the high-fidelity prepared images and the upload-friendly JPG set.
- Preserved the requested images 01, 03, and 05 from the working set and replaced image 02 with the shopping-flow product overlay showing Piccola, its product imagery, product information, and add controls.
- Replaced image 04 with the successful order-completion screen reading that the order has been placed, correcting the user's follow-up clarification that the thank-you/order-success image should be image 04 rather than image 05.
- Removed the extra sixth/contact screenshot from the App Store upload set so the final visible order was a concise five-image narrative rather than a longer mixed package.
- Uploaded five screenshots to App Store Connect under iPhone 6.5 Display, where the page showed 5 of 10 Screenshots and no app previews.
- Verified the visible thumbnail sequence in App Store Connect: About Us, Home, Products/product board, Piccola overlay shopping screen, and order-confirmation success screen.
- Documented the screenshot package in screenshots/app-store/ios-6-5/README.md so future store-update work can tell which files were intended for the App Store upload.

Work Completed - Version Metadata and Build Selection

- Filled the version metadata fields required by App Store Connect, including Description, Keywords, Support URL, Version 1.0, and Copyright.
- Clarified that the copyright field should use the legal rights-holder name rather than a GitHub username or portfolio handle, and confirmed the chosen value 2026 Martin Prah.
- Left Promotional Text blank because it is optional and not required to submit the first review build.
- Left Routing App Coverage File blank because Alla Vostra is not a routing/navigation app that needs geographic coverage data.
- Attached the processed App Store Connect build row for build 2, version 1.0.4, matching the binary previously installed and tested through TestFlight.
- Kept Game Center unchecked because Alla Vostra is a food-ordering app and does not use Game Center features.
- Filled App Review contact information with the user's name, phone number, and email address so Apple has a review contact without requiring customer-facing sign-in credentials.
- Set Sign-in required to unchecked because no account login is required to browse products, enter order details, and complete checkout.
- Added App Review notes explaining that Alla Vostra is a food ordering app for handcrafted grazing boards delivered in South Florida, no sign-in is required, users browse products and provide delivery/contact details, and payments are processed with Apple Pay, card, PayPal, and Stripe where available.
- Left the optional App Review attachment empty because there were no extra demo documents or special review materials needed for this submission.

Work Completed - Privacy Policy and App Privacy Labels

- Added the root-level privacy policy page `privacy.html` with a September 24, 2026 last-updated date, covering collected order/contact data, payment-provider handling, data use, service-provider sharing, retention, user choices, and a contact path.
- Entered `https://allavostra.com/privacy.html` as the App Store Connect Privacy Policy URL and published the App Privacy page after App Store Connect initially continued to show the field as required.
- Re-published App Privacy after the policy URL was present, then confirmed App Store Connect reported the privacy information as Published by Martin Prah.
- Completed the data collection questionnaire with five collected data types: Name, Email Address, Phone Number, Physical Address, and Purchase History.
- Set each collected data type to Used for App Functionality, Linked to the user's identity, and Not used for tracking, matching the app's order-processing purpose and avoiding ad-tracking declarations.
- Clarified that Physical Address on the App Privacy page refers to the customer's delivery or mailing address collected for order fulfillment, not a guarantee that the developer's physical address will be shown to users through this label.
- Left unrelated categories unchecked, including health, fitness, payment info when handled by payment providers without developer card access, credit info, other financial info, location services, sensitive info, contacts, emails/text messages, photos/videos, audio, gameplay content, customer-support-generated data, browsing history, search history, identifiers, usage data, diagnostics, surroundings, body data, and other data.
- Confirmed the App Store privacy preview showed Data Linked to You with Contact Info and Purchases, which is the expected App Store-facing summary for the selected data types.

Work Completed - Review Submission and Error Resolution

- Clicked Add for Review and used the resulting validation messages as the final checklist rather than treating the first error page as failure.
- Resolved the blocking privacy error by publishing the App Privacy changes after the privacy policy URL was entered.
- Returned to the iOS App Version page after privacy publication and rechecked the remaining fields: description, keywords, support URL, copyright, build 1.0.4 (2), screenshots, review notes, and contact information.
- Reattached or reconfirmed the build after App Store Connect cleared it during the navigation loop, selecting iOS App 1.0, version 1.0.4 (2), in the Draft iOS Submission panel.
- Saved the iOS version page after the required metadata and build state were back in place.
- Opened Draft Submissions (1), confirmed iOS App 1.0 was the item ready to submit, and used the final Submit for Review action.
- Submitted one item to Apple App Review; App Store Connect displayed 1 Item Submitted and noted that review can take up to 48 hours.
- Noted that Automatically release this version was selected at the time of submission, so if Apple approves the app and no later release setting is changed, the app may become available automatically under the configured U.S.-only availability and free price schedule.

Validation and Checks Performed

- Verified the U.S. Eastern date locally with TZ=America/New_York date, which reported Thursday, September 24, 2026 at 7:56:09 PM EDT during the worklog generation pass.
- Extracted and reviewed all 68 prior root-level Alla Vostra PDF worklogs with pdftotext, totaling 20,391 extracted lines and 155,858 extracted words before this worklog was created.

- Confirmed the previous worklog PDF, `alla_vostra_worklog_september23.pdf`, used a six-page letter-size format with OpenAI Codex author metadata, Codex standard-library PDF generator creator/producer metadata, and page-footers of the established form.
- Confirmed the latest repository commit before this worklog generation was 2272412 Prepared App Store submission assets and privacy policy.
- Confirmed the screenshot package exists under `screenshots/app-store/ios-6-5` with final PNG and final JPEG versions of 01-home, 02-piccola-overlay, 03-product-board, 04-order-confirmation, and 05-about-us.
- Confirmed App Store Connect accepted the uploaded screenshot set and showed 5 of 10 Screenshots in the iPhone 6.5 Display area.
- Confirmed App Store Connect privacy publication showed the privacy policy URL and the App Store privacy preview with Contact Info and Purchases linked to the user.
- Confirmed Add for Review ultimately produced a Draft Submission with iOS App 1.0, 1.0.4 (2), ready to submit.
- Confirmed the final submission dialog reported 1 Item Submitted.

Files and Artifacts Touched

- `privacy.html` - added a public privacy policy page for the App Store privacy policy URL, covering contact/order data, payment-provider handling, data use, service-provider sharing, retention, user choices, and contact instructions.
- `screenshots/app-store/ios-6-5/README.md` - documented the App Store screenshot package and the intended five-image ordering.
- `screenshots/app-store/ios-6-5/final/01-home-1284x2778.png` - retained as one of the final source PNG screenshots.
- `screenshots/app-store/ios-6-5/final/02-piccola-overlay-1284x2778.png` - replaced with the Piccola product overlay shopping-flow screen.
- `screenshots/app-store/ios-6-5/final/03-product-board-1284x2778.png` - retained as the product-board screenshot.
- `screenshots/app-store/ios-6-5/final/04-order-confirmation-1284x2778.png` - replaced with the successful order-confirmation screenshot after the user's numbering correction.
- `screenshots/app-store/ios-6-5/final/05-about-us-1284x2778.png` - retained as the About Us screenshot.
- `screenshots/app-store/ios-6-5/final-jpeg/*.jpg` - generated upload-ready JPEG counterparts for the five final screenshots.
- App Store Connect - updated out of band for rights, age rating, pricing, availability, screenshots, privacy labels, privacy policy URL, version metadata, build selection, review notes, and final submission.
- `alla_vostra_worklog_september24.pdf` - generated as this documentation artifact after the App Store submission was complete.

External Account, Store, and Device Context

- App Store Connect app: Alla Vostra, App Apple ID 6815443745, bundle identifier `com.allavostra.app`, primary language English (U.S.), categories Food & Drink and Shopping.
- App Store version submitted: iOS App 1.0 using build 1.0.4 (2), the same processed build previously tested through TestFlight and selected in the App Store Connect build picker.
- Age rating context: calculated 4+ rating with regional equivalents for Brazil, Korea, and Vietnam; Made for Kids and override age-rating options remained unset.
- Availability context: United States available on app release, other countries and regions not available, price schedule Free / \$0.00.
- Privacy context: privacy policy URL entered as `https://allavostra.com/privacy.html`, with App Store

privacy labels showing Data Linked to You for Contact Info and Purchases.

- Payment context: app review notes disclosed Apple Pay, card, PayPal, and Stripe where available for physical goods delivered outside the app; no in-app purchase, subscription, loot-box, gambling, or digital content sale was declared.
- Device and screenshot context: screenshot assets were prepared from the available iOS app/device flows and uploaded to the iPhone 6.5-inch App Store screenshot bucket.
- Review context: the final App Store Connect confirmation reported 1 Item Submitted and Apple's note that review can take up to 48 hours.

Follow-up Context

- Monitor App Store Connect and the user's email for Apple review results, metadata questions, rejection messages, or requests for additional explanation about physical goods, privacy labels, checkout, or payments.
- Because Automatically release this version was selected at submission time, confirm the desired launch behavior immediately if Apple approves the app; approval may make the free U.S.-only version available automatically.
- Verify that <https://allavostra.com/privacy.html> is live from the deployed production website after the web repository deployment path has picked up privacy.html, because App Store Connect accepts a URL value but Apple reviewers may open it during review.
- If Apple rejects the build or metadata, preserve the exact rejection text and screenshot before changing fields so the response can be tied to Apple's stated issue rather than guessed.
- Keep the screenshot package in the repository as the source of truth for future App Store screenshot replacements and avoid reordering images unless the product-page narrative changes.
- If privacy practices change later, update both privacy.html and the App Store Connect App Privacy labels before resubmitting or releasing a new version.
- Commit this September 24 PDF artifact separately if preserving the project convention of source/asset commits followed by documentation-only worklog commits.

Output Artifact

- Generated PDF: `alla_vostra_worklog_september24.pdf`.
- Location: repository root, alongside the existing Alla Vostra worklog PDFs from May through September.
- Title: Alla Vostra Mobile App Work Log - September 24, 2026.
- Subject: Alla Vostra September 24 2026 App Store Connect metadata, screenshots, privacy labels, privacy policy, and review submission worklog.
- This artifact records the verified Eastern-time September 24 work window, the completed App Store Connect metadata/privacy/screenshot path, commit 2272412 Prepared App Store submission assets and privacy policy, and the final state that iOS App 1.0, build 1.0.4 (2), was submitted to Apple App Review.
