

Alla Vostra Mobile App Work Log - June 27, 2026

Compiled summary for Saturday, June 27, 2026 - focus: filled-cart overlay product-entry spacing, mini-divider geometry, cart scrollbar persistence and inactive styling, bottom action-button placement, Delivery and Contact form restructuring, and the new Contact overlay inserted between Cart and Delivery in the shopping flow.

Generated automatically on June 27, 2026 after reviewing recent root-level worklog PDFs, the June 27 Git commit chain, current mobile source files, the refreshed June 27 project snapshots, local parser and whitespace checks, and the clean working tree state before this artifact was created.

Includes tracked Git work from commits 3452004, a541b15, 965b321, 4cc89e1, and b48c90d. Together these commits extended the June 26 filled-cart grid work, added a Cart-to-Contact step, reduced form crowding, and made the cart scrollbar communicate scrollability even when only one product entry remains visible.

Source Materials Processed

- Read recent root-level PDF worklogs, especially June 24, June 25, and June 26, with pdftotext to preserve the established title cadence, compact summary opening, source-material section, baseline section, bullet-heavy work sections, validation section, follow-up context, and output-artifact close.
- Reviewed the June 27 Git history from commit 3452004 through b48c90d, including commit messages, timestamps, changed files, and patch stats for filled-cart spacing, Add items and Checkout placement, the standalone Contact overlay, cart row geometry consistency, and persistent dimmed scrollbar behavior.
- Checked current source context in mob/app/shop.js and mob/styles/shopStyles.js, which remained the primary mobile files touched by the June 27 implementation work.
- Reviewed the root project snapshots alla_vostra_APP_PROJECT_SNAPSHOT.txt and alla_vostra_WEB_PROJECT_SNAPSHOT.txt, both updated on June 27, confirming the active mobile work remains in /Users/prahlin/alla_vostra/mob.
- Used git log, git show --stat, git diff --stat, git status, rg, sed, pdftotext, pdfinfo, node --check, git diff --check, repeated Expo Android exports from the implementation cycle, and a small standard-library PDF writer; no external PDF package was installed.

Current Baseline to Preserve

- Primary app work remains in /Users/prahlin/alla_vostra/mob, using Expo Router and React Native as the mobile runtime surface.
- The Shop overlay order is now Products, Cart, Contact, Delivery, Payment, and Confirmed. The Contact overlay is a real separate step, not a visual section inside Delivery.
- Checkout remains visual/front-end only. The flow has form gating, payment choices, confirmation prompts, and completed-order state, but no backend order endpoint, real payment processor, dispatch system, or persisted order record.
- The filled-cart product entry remains a sensitive 2x2 grid: name and price in the top-left cell, Serves plus the number in the top-right cell, product image in the bottom-left cell, and counter plus remove button in the bottom-right cell.
- Scrollbar reservation is now part of the filled-cart geometry even with one product entry. Removing one item from a multi-entry cart should not change product asset sizes, cell boundaries, divider positions, or row alignment.
- The Delivery and Contact forms share field styling, active/inactive white-gray

behavior, gift checkbox behavior, and disabled recipient-field treatment. Future form changes should respect that shared surface language.

Main Goals We Worked Toward

- Give the filled-cart overlay more breathing room while preserving the four-cell product-entry structure accepted on June 26.
- Make the cart overlay controls more ergonomic by bottom-aligning Checkout, adding Add items above it, and letting Add items return to the product overlay while disabling when all product types already have cart entries.
- Split Contact information away from Delivery Address so the mobile keyboard does not force too many form fields into one crowded overlay.
- Make the filled-cart scrollbar communicate that the cream area is a vertical product list even when only one entry remains after removal.
- Stabilize one-product and multi-product filled-cart geometry so scrollbar presence, dimming, or activation is the only meaningful visual difference.

Work Completed - Filled-Cart Product Entry Spacing

- Matched the very top divider of the filled-cart overlay to the scrollbar border color and thickness, tying the cart cream-area frame together visually.
- Expanded the vertical breathing room above and below each product entry, then converted those spaces into true top and bottom margins so they remain separate from the internal vertical alignment logic of the four cells.
- Protected the top margin so the extension begins below the top thick divider rather than pushing the divider itself away from the cream-area edge.
- Matched bottom margin distance to the top margin distance so the empty space between Serves and the upper thick divider feels equal to the space between the counter and the lower thick divider.
- Reduced filled-cart product-entry assets twice by 10 percent, covering product name, price tag, Serves text and number, image, counter, and remove button through the shared cart product asset scale.
- Kept the reduced asset scale wired in both app layout math and Shop styles so actual image/button sizes and text styles stay synchronized.

Work Completed - Mini Dividers and Cell Alignment

- Removed the thinner duplicate horizontal divider that appeared between two product entries when the cart contained multiple products.
- Restored mini divider color and thickness after cream-colored experiments produced fuzzy-looking lines, then reduced their opacity to 50 percent so they remain barely noticeable without becoming blurry.
- Adjusted top-right and top-left cell vertical spacing so Serves, product names, and related text use the same vertical alignment logic.
- Moved vertical gaps around price tags and mini horizontal dividers so the perceived gap sits below the mini dividers and above the image/counter area rather than between price and divider.
- Aligned the top-right and bottom-right cell assets from the middle mini vertical divider to the right edge of the thick long horizontal divider, instead of extending their usable area to the beginning of the scrollbar.
- Recentered the top mini vertical divider between the upper thick divider and the mini horizontal dividers, then mirrored that logic for the bottom mini vertical divider between the mini horizontal dividers and lower thick divider position.

Work Completed - Cart Buttons and Navigation

- Bottom-aligned the Checkout button inside the cart overlay white area without encroaching on the white area bottom margin.
- Copied that button, placed the new one above Checkout, named it Add items, and gave it a green background.
- Made Add items use the same action as the left triangle next to Cart, returning the user to the product overlay to add additional product types.
- Dimmed and disabled Add items whenever all three sold products - Sei Perfetto, Buon Natale, and Piccola - already have visible product entries in the filled cart, regardless of whether any quantity is 0.
- Repositioned Continue and Place order on their respective overlays to match Checkout button placement, using the same distance from the orange bottom banner to the orange action buttons.

Work Completed - Contact and Delivery Form Restructure

- Removed dashed placeholder marks from the State dropdown and matched State field white-gray behavior to other fields: gray by default, white when tapped, and remaining white only after an actual state or territory is chosen.
- Added a Gift checkbox below the contact fields, sized it to half the field height, labeled it Gift, and aligned the checkbox plus label with the surrounding form grid.
- Added Recipient name, kept it dimmed and untappable until Gift is checked, made it immediately white and tappable when active, and brightened the dimmed recipient text for readability.
- Renamed and rearranged contact fields into a two-column First name, Last name, Email, and Phone # structure, then removed the truck image from that overlay area.
- Reduced form field tallness by 10 percent, then corrected the field-height implementation so actual boxes shrink rather than only the Gift checkbox shrinking.
- Swapped the Delivery Address and Contact sections, then split Contact into its own overlay after the user clarified the correct order should remain Products, Cart, Contact, Delivery, Payment, Confirmed.
- Moved Recipient name onto the same row as the Gift checkbox/text and vertically centered the Gift control against the recipient field.
- Moved State/Zip down one row, left-aligned it, cut City and Zip widths in half, and reduced State width by another 10 percent while preserving Zip width.

Work Completed - New Contact Overlay

- Created a standalone Contact overlay and made the center button reflect Contact while that overlay is active.
- Copied only the contact information section into the new overlay and removed that section from Delivery, allowing Delivery to begin at Delivery Address with no blank gap above it.
- Updated overlay state so Cart checkout enters Contact, Contact Continue enters Delivery, Delivery Continue enters Payment, and Payment still leads into the existing order prompt and Confirmed state.
- Updated left and right triangle navigation so Cart moves back to Products or forward to Contact, Contact moves back to Cart or forward to Delivery, Delivery moves back to Contact or forward to Payment, and later steps keep their existing order.
- Split Contact and Delivery required-field gating so Contact Continue cares about contact fields, Delivery Continue cares about address fields, and Payment Place order remains protected by both sections being complete.
- Kept Contact and Delivery form rendering tied to the same field surface language so future visual changes can be shared rather than duplicated.

Work Completed - Scrollbar Persistence and Inactive State

- Changed the filled-cart layout so it reserves the scrollbar lane whenever there is at least one product entry, making one-product and multi-product geometry match.
- Kept the actual custom scrollbar visible in a dimmed/inactive state when a cart drops from two or more product entries down to one entry, instead of removing the scrollbar entirely.
- Made the scrollbar active and orange-filled again when more than one product entry appears in the cart.
- Changed the dimmed scrollbar fill to white rather than orange so the inactive state reads as quiet and non-scrollable.
- Removed the bottom black border of the scrollbar so the white inactive scrollbar blends into the white receipt area below the cream product area.
- Preserved pointer-events none on the custom scrollbar layer; the functional scroll surface remains the cart ScrollView while the custom scrollbar communicates scroll position and availability.

Validation and Checks Performed

- Freshly ran node --check mob/app/shop.js before generating this artifact.
- Freshly ran node --check mob/styles/shopStyles.js before generating this artifact.
- Freshly ran git diff --check -- mob/app/shop.js mob/styles/shopStyles.js before generating this artifact; no whitespace or patch-format issues were reported.
- Confirmed the working tree was clean before creating this June 27 PDF artifact.
- During the June 27 implementation cycle, repeatedly ran Babel parser checks against mob/app/shop.js and mob/styles/shopStyles.js after JSX-heavy overlay changes.
- During the June 27 implementation cycle, repeatedly ran npx expo export --platform android after the Contact overlay insertion, cart asset-scale changes, divider alignment work, single-product layout reservation, and dimmed scrollbar behavior.
- Verified the most recent Android export target
/tmp/alla_vostra_cart_dim_scrollbar_export completed successfully before this worklog request.

Files Touched / Added During June 27

- Primary Shop implementation, overlay flow state, Contact and Delivery form rows, cart button actions, filled-cart product-grid geometry, scrollbar reservation, and scrollbar activation logic: mob/app/shop.js.
- Primary Shop styling, contact/delivery field sizing, Gift checkbox alignment, filled-cart asset scaling, scrollbar inactive state, white inactive thumb, and scrollbar bottom-border removal: mob/styles/shopStyles.js.
- Generated project state records from the June 27 snapshot refresh:
alla_vostra_APP_PROJECT_SNAPSHOT.txt and alla_vostra_WEB_PROJECT_SNAPSHOT.txt.
- This final worklog generation creates alla_vostra_worklog_june27.pdf at the repository root.

Important Follow-Up Context

- The new Contact overlay improves form ergonomics but remains front-end UI only. Contact data, recipient name, gift state, address data, and payment choice still need real validation and persistence when production checkout is built.
- The current order path depends on separate gating for Contact and Delivery. Future navigation changes should preserve the distinction between contact-complete, delivery-complete, and full order-ready states.
- The filled-cart row remains layout-sensitive. Asset scale, scrollbar width, thick

- divider right inset, mini-divider geometry, and cell bounds are now closely coupled.
- The one-product and multi-product filled-cart layouts intentionally share reserved scrollbar space. Future requests to hide or resize the scrollbar should be checked against both one-entry and multi-entry cart states.
 - The inactive scrollbar uses a white fill and no bottom border so it visually merges into the receipt area. Changes to receipt background color or scrollbar border color may require retuning that blend.
 - The Contact and Delivery fields now share more field-rendering assumptions. Future edits should avoid creating separate one-off styles unless the requested behavior is truly overlay-specific.

Output Artifact

- Created this worklog PDF: [alla_vostra_worklog_june27.pdf](#).
- No external PDF package was installed; this artifact was generated with a small standard-library PDF writer in the same plain-text-readable spirit as the prior daily worklogs.
