

Alla Vostra Mobile App Work Log - July 4, 2026

Compiled summary for Saturday, July 4, 2026 - focus: Shop overlay gradient polish, overlay navigation cleanup, app-header stability, Products-screen grouped magnification, filled-cart grid/divider refinement, total-box presentation, Stripe payment popup simplification, and the enlarged payment confirmation prompt.

Generated automatically after reviewing the July 2 Part 2 worklog PDF, the July 4 Git commit chain, current mobile source files, local syntax checks, whitespace checks, and the clean working-tree state before this artifact was created.

Includes tracked Git work from commits 46b9440 through 1464fb1. Together these commits moved the late Shop experience from functional checkout into a more visually coherent, tactile, and app-store-presentable mobile purchasing flow.

Source Materials Processed

- Read the recent root-level July 1 and July 2 worklog PDFs with pdftotext to preserve the established title cadence, compact summary opening, source-material section, baseline section, goal list, bullet-heavy work sections, validation section, follow-up context, and output-artifact close.
- Reviewed the July 4 Git history from 46b9440 through 1464fb1, including commit messages, changed files, patch stats, and implementation areas for gradients, overlays, header behavior, Products magnification, cart dividers, total-box layout, and Stripe payment entry.
- Checked current source context in mob/app/shop.js, mob/styles/shopStyles.js, mob/app/products.js, mob/styles/productsStyles.js, mob/components/AppHeader.js, mob/components/MainScreenIntroSpacer.js, mob/components/StickyCartButton.js, and mob/styles/stickyCartStyles.js.
- Confirmed that July 4 work remained concentrated in the mobile app. No server-side Stripe or Postmark route changes were part of this daily worklog window.
- Used git log, git show --stat, git show --name-only, git status, git diff --check, rg, sed, pdftotext, pdfinfo, node --check, and a small standard-library PDF writer; no external PDF package was installed.

Current Baseline to Preserve

- Primary app work remains in /Users/prahlin/alla_vostra/mob, using Expo Router, React Native, shared Shop cart context, Stripe secure card capture, and the existing Vercel/Postmark backend services established earlier.
- The Shop overlay sequence now reads Products, Cart, Who, When, Where, Payment, and Confirmed in user-facing center-button language. The Delivery Date & Time controls have been separated into their own Time / When overlay between Contact and Address.
- Action buttons across the Shop experience now use richer gradient treatments while avoiding the center overlay navigation button states that should remain visually distinct during step navigation.
- The bottom-left X button exists on Shop overlay windows as a hard exit/reset affordance, while the Stripe card-details popup can be closed locally to return to the general Payment overlay.
- Main screen header behavior is more stable during swipe navigation and vertical scroll. The mysterious gray transparency artifact in the app-header image was removed without reintroducing the earlier main-screen occlusion issue.
- The filled-cart overlay remains the most layout-sensitive area. Horizontal dividers, outside vertical dividers, in-grid mini dividers, product rows, counters, remove buttons, scrollbar, and the Total box are tightly coupled and should be changed carefully.

Main Goals We Worked Toward

- Give Shop action buttons and overlay banners a richer red, green, and orange visual finish without disrupting the established button geometry.
- Separate delivery date/time selection from the address overlay so checkout steps feel less crowded and center-button names are simpler.
- Add a bottom-left X exit button that mirrors the sticky cart button placement and gives

customers an obvious way out of overlay checkout.

- Stabilize the app header during main-screen navigation and scroll, especially around the transparent bottom of the header image and the cheeseboard image layer.
- Make Products-screen image/text sections resize as unified product groups, matching the Home screens calmer magnification model.

- Refine the filled-cart grid and divider system until product entries read as closed, balanced 2x2 grids without disturbing the assets inside each cell.
- Simplify and focus the Payment overlay so card entry happens in a smaller Stripe-specific

popup and the order confirmation prompt clearly summarizes the cart before Yes/No confirmation.

Work Completed - Gradient Button and Banner System

- Applied subtle gradient treatment to green and red Shop overlay buttons so Yes/No and confirmation-related actions gained depth while retaining their base colors.
- Extended an equivalent orange gradient to appropriate orange action buttons, including Add, Add more items, sticky cart, and Shop-screen action surfaces that should share the richer button language.
- Avoided applying the orange gradient to center Shop overlay navigation states where the user specifically wanted the middle overlay button preserved.
- Restored white filling inside the three top boxes of the Shop screen and limited the orange gradient to the orange outer areas around those white boxes.
- Applied orange gradients to the bottom and top orange banners of Shop overlay windows, then tuned direction and brightness so top sliders and banners feel like paired surfaces rather than mismatched layers.
- Matched orange scrollbar and top/bottom triangle buttons to the banner gradient direction, including a brighter top-edge treatment for the scrollbar.

Work Completed - Overlay Sequence and Exit Control

- Moved the Delivery Date & Time section into a separate overlay between Contact and Address, reducing crowding in the address form and making scheduling its own step.
- Renamed center-button labels for clarity: Contact became Who, Time became When, and Address became Where.
- Added a sticky bottom-left X button on Shop overlay windows, using the sticky cart button size and vertical placement logic while mirroring it on the left edge.
- Built the X mark as a large centered white lowercase-looking symbol using two rounded straight strokes rather than a text character, keeping the look square and sturdy.
- Wired the X to close open checkout overlays and return to the Shop preview state, forgetting selected options and input values instead of behaving like simple back navigation.
- Added a later special case so when the Stripe card-details popup is open, tapping X closes only that payment popup and returns to the general Payment overlay rather than wiping the whole checkout flow.

Work Completed - App Header and Main-Screen Stability

- Investigated repeated app-header navigation glitches involving jiggling, delayed repositioning, visibility inconsistencies, and background image behavior during left/right main-screen swipes.
- Reworked the header behavior after an initial attempt blocked full vertical scroll recovery and could disable later navigation after a scroll/navigation combination.
- Traced the gray transparent-bottom artifact to screen/header opacity interactions during downward scroll rather than to a permanent gray area in the source image.
- Removed the gray darkening visible through the transparent bottom of the app-header image while preserving main-screen visibility and avoiding the failed approach that caused the header image to eclipse content.
- Replaced top horizontal divider lines on main screens with equivalent white spacer gaps so content does not appear immediately at the top on most phones.

- Kept the cheeseboard/header image layer as the visual signal for screen transitions instead of relying on top dividers.

Work Completed - Products Screen Magnification

- Changed Products-screen magnification so each product image, header, paragraph, ingredients section, and Buy button grows or diminishes as a combined product set.
- Matched the behavior more closely to the Home screen, reducing the distracting effect of each product sub-asset resizing independently during scroll.
- Tuned the bottom timing so product sections diminish later during downward scroll and grow earlier when scrolling upward.
- Renamed Buy this item buttons to Buy, then to product-specific calls such as Buy Piccola so each action is short but still clear.
- Applied Shop-style orange button treatment to Products Buy buttons, including border, corner

rounding, and gradient language consistent with the rest of the mobile app.

Work Completed - Filled-Cart Product Grid Refinement

- Added long outside vertical divider lines around filled-cart product-entry grids, then iteratively replaced them with mini-divider styling to match the dividers already inside each 2x2 grid.
- Adjusted outside divider length, vertical centering, and margin encroachment so the outer

dividers frame the cells without splitting product pairs or disturbing internal asset alignment.

- Recentered product-name, product-image, counter, and remove-button cells between the relevant dividers while preserving the requested paired/set structure.
- Reduced the horizontal gap between counters and remove buttons, then redistributed the right-column assets until the controls read more evenly inside their cells.
- Matched long horizontal divider sets to the same color, opacity, and hairline look as the mini grid dividers, then reduced divider visibility slightly for a softer cart presentation.
- Centered long horizontal dividers with the overall grid while avoiding unwanted filled areas at the left and right ends.
- Ensured every visible product-entry grid has a closed 2x2 look with a bottom divider, while avoiding empty space before the first product entry and keeping entries from bleeding over orange banners.
- Removed unnecessary duplicate horizontal dividers between consecutive grids where the first entry bottom divider and second entry top divider created an ugly middle line.

Work Completed - Filled-Cart Total Box and Scrollbar Polish

- Enclosed TOTAL and the green dollar amount in an additional bordered box while preserving the pre-existing green amount cell language.
- Moved letter-spacing growth and padding responsibility to the larger Total container so the inner label and amount cells could remain visually stable during cart pricing changes.
- Tuned Total and green amount font sizes so TOTAL reads slightly larger than the green dollar amount but neither jumps during price updates.
- Converted the green dollar amount into the second row of the larger Total box, removing side gaps and making the two-cell column read as one structured price component.
- Aligned the Total box against Delivery and Taxes row edges in the filled-cart overlay, then continued tuning to keep the visible top/bottom borders visually tied to the surrounding receipt rows.
- Applied the orange top-banner gradient direction to the filled-cart scrollbar and increased top-edge brightness after review.

Work Completed - Payment Overlay and Stripe Card Popup

- Made the Debit/Credit Card button mimic the top payment-method buttons, then scaled all four method buttons so spacing across the cream area matched the established overlay margins.
- Replaced the Debit/Credit text button treatment with a royalty-free card-style visual

representation so the card path reads more like the other payment method buttons.

- Changed card entry to open in an additional payment popup matching the confirmation-message overlay scale rather than crowding the main Payment overlay.
- Removed unnecessary issuer, first name, last name, billing-address checkbox, and extra billing fields after confirming Stripe did not require them for the chosen flow.
- Kept Stripe-native secure input fields rather than ordinary app text inputs, preserving the earlier security baseline where raw card numbers, expiration, and CVV are not stored by the app.
- Reinstated a portrait-style card form with a ZIP field after the single landscape Stripe field felt too compressed and unclear.
- Added a larger green checkmark badge below the card button after valid Stripe card information is accepted, allowing Place order only after the secure card details are complete.

Work Completed - Payment Confirmation Prompt

- Repositioned confirmation controls so the red No button appears bottom-left and the green Yes button occupies the Place order position instead of covering the prompt awkwardly.
- Dimmed the Place order button while the confirmation prompt is open so the final decision is clearly moved to Yes/No.
- Greatly enlarged the question popup and matched its margins to the cream overlay assets, using the green card-check area and overlay margins as reference points during tuning.
- Copied the filled-cart white-area text assets into the top of the question overlay without

including Checkout or Add items controls.

- Added the receipt divider above Delivery and split the confirmation prompt into a top receipt zone and a bottom question zone, then scaled receipt text assets up for readability.
- Removed left/right constraints inside the copied white-area asset zone so product names and prices can sit far left and far right like a compact receipt summary.
- Broke inheritance from the filled-cart Total layout where needed so the question overlay can place the TOTAL / green dollar amount two-cell column next to Delivery and Taxes instead of inheriting cart-only vertical geometry.
- Changed the question popup typography to regular TT Fors with only Alla Vostra bolded, keeping

the confirmation question softer while preserving brand emphasis.

Validation and Checks Performed

- Freshly ran node --check on mob/app/shop.js, mob/styles/shopStyles.js, mob/app/products.js, mob/styles/productsStyles.js, mob/components/AppHeader.js, mob/components/MainScreenIntroSpacer.js, mob/components/StickyCartButton.js, and mob/styles/stickyCartStyles.js before generating this artifact.
- Freshly ran git diff --check before generating this artifact; no whitespace or patch-format issues were reported.
- Reviewed git status before creating this artifact and confirmed the working tree was clean.
- Reviewed July 4 commit stats and changed file lists for commits 46b9440 through 1464fb1, confirming the tracked work touched only mobile app and style files.
- Did not run a fresh Expo export during this PDF-generation step. The recorded checks here are local syntax/whitespace checks plus Git history and source review.

Files Touched During July 4

- Shop overlay implementation, checkout overlay sequence, X button behavior, gradient application points, filled-cart grid/divider math, total-box layout, Stripe popup/card validation, and payment confirmation prompt: mob/app/shop.js.
- Shop overlay styling, sticky-left X geometry, popup and payment styles, confirmation prompt styles, divider styling, card method button treatment, total-box styling, and related spacing: mob/styles/shopStyles.js.
- Products-screen grouped magnification and Buy button behavior: mob/app/products.js and mob/styles/productsStyles.js.
- Main app header scroll/navigation stabilization and top spacer replacement:

mob/components/AppHeader.js and mob/components/MainScreenIntroSpacer.js.

- Sticky cart gradient and quantity-bubble clipping protection: mob/components/StickyCartButton.js and mob/styles/stickyCartStyles.js.
- This final worklog generation creates alla_vostra_worklog_july4.pdf at the repository root.

Important Follow-Up Context

- The filled-cart overlay is now visually much more structured, but it remains sensitive to small divider and grid changes. Future edits should test one-entry, two-entry, and three-entry carts before committing.
- The Payment overlay depends on Stripe secure native card fields. Styling around those fields can be changed, but the card number, expiration, and CVV should stay inside Stripe-controlled input surfaces for security.
- The Payment confirmation prompt now displays a receipt-style summary before final Yes. Any future order payload additions, such as delivery date/time, should also be reflected in this summary and in the Postmark email path.
- The main header fix removed the gray transparency artifact. Future header animation changes should be tested while swiping between main screens and while vertically scrolling from collapsed to fully visible header states.
- The X button intentionally resets the checkout flow except when the Stripe card-details popup is open, where it acts as a local close affordance. That distinction should be preserved.
- The orange/green/red gradient system is now part of the app visual language. New action buttons should reuse it deliberately, while center overlay navigation states should remain protected unless specifically changed.

Output Artifact

- Created this daily worklog PDF: alla_vostra_worklog_july4.pdf.
- The file is named for July 4 and placed at the repository root to follow the existing

root-level worklog naming convention.

- No external PDF package was installed; this artifact was generated with a small standard-library PDF writer in the same plain-text-readable spirit as the prior daily worklogs.
