

Alla Vostra Mobile App Work Log - August 11, 2026

Compiled summary for Tuesday, August 11, 2026 - focus: Play Store screenshot device-frame unification, portfolio hero frame reuse, Play Store 1 feature-graphic regeneration, Play Store 2 and Play Store 4 frame replacement, Play Store 3 About Us recomposition and perspective warp, TT Fors headline weight repair, Play Store 5 Piccola plate restoration, reusable screenshot-frame tooling, snapshot refresh, commit sync, and current documentation artifact generation for Alla Vostra.

Generated in continuity with the established Alla Vostra worklog cadence: compact opening summary, source-material review, baseline, goals, grouped work-completed sections, validation, files touched, follow-up context, and output-artifact close.

This artifact is named `alla_vostra_worklog_august11.pdf` because no earlier August 11 root-level worklog PDF existed before this documentation pass. It records the work window after the August 10 Part 3 worklog commit `8ade450`, through the current committed source state at `ba897f9`.

Source Material Reviewed

- Waited for the repository state to settle after the user referenced syncing, then confirmed the working tree was clean before generating this documentation artifact.
- Reviewed all 54 pre-existing root-level Alla Vostra worklog PDFs with `pdftotext/pdftinfo` to preserve the current naming convention, letter-size page format, footer behavior, section order, density, bullet style, and output-artifact language.
- Used `alla_vostra_worklog_august10_part3.pdf` as the closest style anchor because it was the immediately preceding PDF worklog and used the same Codex standard-library creator/producer metadata convention.
- Reviewed git history after the August 10 Part 3 worklog, using `8ade450..ba897f9` as the source range for this August 11 narrative.
- Inspected the current Play Store screenshot final set under `docs/play-store/screenshots/final`, including Play Store 1 through Play Store 5 full exports and the paired trim-lr10 images.
- Reviewed the screenshot mockup tooling changes under `docs/play-store/screenshots/mockups`, including the feature-graphic generator, the new device-frame replacement script, and the `package.json` script entry for frame regeneration.
- Confirmed the imported centered About Us large screenshot source under `docs/play-store/screenshots/raw/Android_Large` and the already-available Alla Vostra device-frame source under `docs/play-store/screenshots/raw/device-frames`.

Baseline Status Before August 11

- The repository already contained three August 10 worklogs. Part 1 covered the first post-August-1 Play Store marketing asset pass, Part 2 covered later device-frame and headline restoration work, and Part 3 covered additional screenshot typography, spacing, corner, and camera/island cleanup.
- The current work began from the August 10 Part 3 documentation commit, `8ade450`, with the Play Store screenshot family already improved but still needing a deeper frame replacement pass and several user-directed visual corrections.
- Play Store 2 and Play Store 4 still needed their screenshot device frames replaced with the exact visual language of the middle phone frame from the Alla Vostra hero in the portfolio repo.
- The earlier device-frame treatments still carried an unwanted front-facing camera or black landscape-rectangle element that could obscure the underlying screenshot and needed to be removed without distorting the captured screen content.

- Play Store 3 still needed the correct alternate About Us large screenshot, a full replacement of the pre-existing device/screenshot stack, a frame around the About Us view, and a final position/warp treatment that matched the user-directed composition.
- The TT Fors headline treatment was inconsistent across the screenshot family, especially for the right-hand Play Store text and the flattened Play Store 2 and Play Store 5 headline images.
- Play Store 5 temporarily drifted toward an incorrect side-view board image during text cleanup; the intended product art was the Piccola circular plate image used by the products overlay screen in this repository.
- No mobile runtime feature, web page behavior, backend endpoint, Firebase rule, or release pipeline behavior was intended to change during this August 11 work window.

Goals for August 11

- Replace the screenshot device frames in Play Store 2 and Play Store 4 with the exact newest Alla Vostra device-frame look sourced from the portfolio hero reference, importing or reusing the frame inside this repository as needed.
- Increase screenshot aperture rounding so the black bezel remains visible at screenshot corners, then tune it slightly further until the left, right, and top bezel lines read consistently.
- Remove the black front-facing camera rectangle from each affected frame while preserving the proportions and pixel integrity of the underlying screenshots.
- Study the Play Store 1 TT Fors treatment and apply the correct heavier weight to the right-hand/headline text in Play Store 2, Play Store 4, and Play Store 5 without intentionally changing size, placement, or alignment.
- Add the same white-text drop shadow used by Play Store 2, 4, and 5 to the Alla Vostra brand and right-hand text in Play Store 1, while leaving unrelated assets alone.
- Find and import the alternate centered About Us large screenshot, rebuild Play Store 3 around it, and iterate placement and trapezoid/perspective warp until the user-approved composition was reached.
- Apply the newest device-frame version correctly across all seven device/screenshot stacks in Play Store 1 and regenerate the feature graphic outputs.
- Repair Play Store 2 and Play Store 5 text by rebuilding the TT Fors headline layers cleanly so old raster text was removed rather than merely covered.
- Restore Play Store 5 to the Piccola circular plate source from the products overlay screen and regenerate its full and trim exports.

Work Completed - Device Frame Replacement for Play Store 2 and 4

- Replaced the Play Store 2 and Play Store 4 screenshot device frames with the newest Alla Vostra frame style matching the middle phone frame from the portfolio hero reference.
- Composited the screenshots beneath a true frame overlay, using the frame aperture rather than a CSS-like generic phone shell, so the frame chrome stayed above the screen image.
- Rounded the screen apertures enough for the black bezel to remain visible through the screenshot corners, then increased that rounding again after the user requested slightly more visible corner bezel.
- Removed the old front-camera/dynamic-island-like black landscape rectangle from the affected device frames so the top of each screenshot was clear.
- Protected the underlying screenshots from distortion by resizing and masking the screen content independently from the outer frame rather than stretching a combined flattened phone image.

- Generated paired full and trim exports for Play Store 2 and Play Store 4 after the frame work, keeping the 1920x1080 and 1536x1080 final-output relationship intact.
- Added docs/play-store/screenshots/mockups/replace-playstore-device-frames.js as a reusable Sharp-based frame replacement script for the Play Store 2 and Play Store 4 device stacks.
- Added the generate:frames npm script in docs/play-store/screenshots/mockups/package.json so future frame-regeneration work can be repeated from the mockups folder.

Work Completed - Play Store 1 and Feature Graphic Device Stack Update

- Updated docs/play-store/screenshots/mockups/generate-feature-graphic.js so Play Store 1 and feature-graphic rendering use preframed phone images instead of the prior CSS-drawn phone shell.
- Introduced reusable frame constants and helper functions for the feature graphic generator, including the Alla Vostra hero frame path, frame size, screen aperture, rounded mask behavior, and screen-under-frame composition path.
- Removed the old CSS phone border, inset screen wrapper, and top camera pseudo-element from the Play Store 1 generator output path.
- Applied the newest device-frame version across all seven visible device/screenshot stacks in Play Store 1, matching the current frame language used elsewhere in the screenshot set.
- Preserved the established deck arrangement, background, badge stack, and overall feature-graphic composition while refreshing the device chrome.
- Regenerated Play Store 1, the clean feature-graphic upload PNG/JPG exports, the mockups output foreground/full images, and mob/assets/store/feature-graphic.png from the updated generator path.
- Kept the feature graphic export family aligned with the Play Store 1 artwork so the app-store feature graphic and the local mobile asset no longer represented an older device-frame treatment.

Work Completed - Play Store 1 Text Shadow and TT Fors Reference Use

- Studied playstore1.png as the typographic reference for the right-hand TT Fors treatment before applying headline-weight changes elsewhere in the Play Store family.
- Identified the Play Store 1 right-hand Smooth / Savory / Posh text as the practical target: TT Fors at font-weight 700 with a heavy outline/stroke treatment, while the small delivery badges used a separate heavier badge style.
- Added the same drop-shadow treatment used on the white text in Play Store 2, Play Store 4, and Play Store 5 to the Alla Vostra brand lockup and the right-hand TT Fors text on Play Store 1.
- Kept the Play Store 1 shadow pass scoped to the requested text elements rather than changing unrelated artwork or secondary assets.
- Regenerated the affected Play Store 1 and feature-graphic outputs after the text-shadow and device-frame generator changes so the final exported files reflected the live generator state.

Work Completed - Play Store 3 About Us Rebuild and Perspective Treatment

- Located the alternate centered About Us Android Large screenshot and imported it into docs/play-store/screenshots/raw/Android_Large/about_us_screen_large_centered.png.
- Replaced the former Play Store 3 composition with the About Us image as the primary framed screenshot rather than leaving earlier device/screenshot stacks in place.
- Built the Play Store 3 image against the established orange gradient background and

device-frame visual language, adding the frame around the About Us screenshot after the user called out the missing frame.

- Scaled the screenshot/device-frame stack to roughly 200 percent of the orange background height, then iterated placement from left-clipped through on-screen alignment per the user direction.
- Moved the Play Store 3 stack through multiple user-directed position passes: downward to leave about 100px top padding, right by 100px, right another 50px, then far enough right for the whole stack width to sit on screen.
- Applied a trapezoid/perspective warp with a narrower top and wider bottom, then increased that effect in multiple passes while ensuring the chevrons and About Us screen text warped with the screenshot rather than lagging behind it.
- Recentered the stack horizontally, moved it upward and downward through the requested clipping tests, then settled the final vertical position so the complete cheeseplate was visible while accepting background mosaic clipping as needed.
- Regenerated playstore3.png and playstore3_trim-lr10.png together after the final composition was approved.

Work Completed - TT Fors Headline Rebuilds for Play Store 2 and 5

- Compared the Play Store 2 and Play Store 5 headline weight against Play Store 1 and Play Store 4 after the user noted that images 2 and 5 looked off.
- Explained the available source values: Play Store 1 right-hand TT Fors text used a 700 weight with a 5.7px dark stroke, while Play Store 2 and Play Store 5 were flattened raster text layers rather than live editable font layers.
- Rebuilt the Play Store 2 and Play Store 5 headline text from the actual TT Fors variable font rather than using another raster dilation pass.
- Loaded TT Fors through the same base64 data-URL pattern used by the existing Play Store generator so Chromium rendered the real project font instead of falling back to a serif face.
- Rendered the rebuilt headline layers at font-weight 700 with the matching off-white fill, dark stroke, paint order, and shadow style from the Play Store 1/4 treatment.
- Corrected the first attempted overlay approach after the user pointed out old text remained underneath; then rebuilt the images from clean layers so the prior raster text was actually removed.
- For Play Store 2, rebuilt from the orange gradient background plus freshly composited device stacks and a single clean TT Fors text layer for 2 Min / To Order. and Next-Day / Delivery.
- For Play Store 5, kept the clean TT Fors Always / Home-Made. text layer while rebuilding the product image underneath from a proper source asset rather than a patched final image.

Work Completed - Play Store 5 Piccola Plate Restoration

- Responded to the final Play Store 5 correction by switching away from the incorrect side-view board image and back to the intended Piccola product image from this repository.
- Confirmed the Piccola product mapping in mob/data/shopOverlayProducts.js and mob/data/products.js, where Piccola points to janny1brevised.png.
- Selected the higher-resolution circular plate source at other/assets/images/janny1brevised.png for the Play Store 5 render, while preserving the repository-local product identity and not using an unrelated external image.
- Measured the real alpha bounds of the circular plate source so the transparent padding did not influence final scaling or placement.

- Rendered fresh Play Store 5 candidates from the clean orange gradient background, the circular Piccola plate, a subtle shadow layer, and the clean TT Fors headline layer.
- Chose the candidate that best matched the previous Play Store 5 hierarchy: large circular top-view plate, centered under the headline, with bottom clipping consistent with the established marketing composition.
- Regenerated docs/play-store/screenshots/final/playstore5.png and docs/play-store/screenshots/final/playstore5_trim-lr10.png from that Piccola composition.

Work Completed - Project Snapshots, Commit, and Sync State

- Refreshed alla_vostra_APP_PROJECT_SNAPSHOT.txt and alla_vostra_WEB_PROJECT_SNAPSHOT.txt after the Play Store artwork changes so the project snapshots reflected the latest asset and tooling surface.
- Committed the August 11 source work as ba897f9 Refreshed Alla Vostra Play Store artwork, with the final Play Store PNG/JPG assets, mockup generator changes, new frame replacement script, imported centered About Us raw screenshot, and refreshed snapshots included.
- Kept this PDF worklog generation as a separate documentation artifact after the artwork commit, following the previous August 10 pattern where the PDF-only worklog commits added only the new root-level PDF.
- Confirmed after the artwork commit that local main was ahead of origin/main by one commit, with origin/main still at the August 10 Part 3 worklog commit 8ade450 at the time this worklog was generated.
- Did not modify application runtime screens, backend code, deployment settings, store metadata copy, or payment behavior during this documentation pass.

Validation and Checks Performed

- Ran git status --short before PDF generation and confirmed no uncommitted source changes remained after the artwork commit.
- Ran git status --short --branch and git branch -vv, confirming main was clean and ahead of origin/main by one commit before this PDF artifact was created.
- Reviewed git log --oneline --decorate with ISO dates to confirm the latest sequence: ba897f9 after 8ade450, 20e3475, f978c6f, e11dca4, and the earlier August 10 artwork/worklog commits.
- Reviewed git show --stat --name-status for ba897f9 to confirm the exact files in the August 11 source range, including all final Play Store assets, mockup scripts, the About Us centered raw screenshot, the feature graphic asset, and snapshots.
- Used git diff --stat and git diff --name-status over 8ade450..ba897f9 to validate the summarized changed surface: 22 files, including binary Play Store outputs and 447 inserted script/snapshot lines.
- Used sips to verify final image sizes after the screenshot asset work: full Play Store exports remained 1920x1080 and trim-lr10 exports remained 1536x1080.
- Used visual preview checks during the image work to catch and correct old-text ghosting, font fallback, side-view product drift, rough board extraction artifacts, and device-frame alignment issues before finalizing outputs.
- Used pdftinfo and pdftotext on prior worklogs before generation to preserve page size, metadata style, title cadence, section rhythm, and PDF text readability conventions.
- Did not run Expo, Android emulator, Playwright app tests, backend tests, or deployment tests because the August 11 source work changed static marketing artwork and generator scripts rather than executable product behavior.

Files Touched During August 11

- alla_vostra_APP_PROJECT_SNAPSHOT.txt - refreshed the mobile/app snapshot timestamp after the Play Store artwork pass.
- alla_vostra_WEB_PROJECT_SNAPSHOT.txt - refreshed the web/project snapshot and added the new worklog/tooling/raw screenshot entries that existed at snapshot time.
- docs/play-store/screenshots/final/feature-graphic-upload-1024x500.jpg - regenerated the feature graphic upload image from the newest frame-aware Play Store 1 generator output.
- docs/play-store/screenshots/final/feature-graphic-upload-clean-1024x500.jpg - regenerated the clean feature graphic JPG pair from the updated generator.
- docs/play-store/screenshots/final/feature-graphic-upload-clean-1024x500.png - regenerated the clean feature graphic PNG pair from the updated generator.
- docs/play-store/screenshots/final/playstore1.png - regenerated Play Store 1 with the newest device frames across all visible stacks and the requested text shadow treatment.
- docs/play-store/screenshots/final/playstore1_feature-assets90_deckdown60_extended-gradient_1024x500.png - regenerated the extended-gradient feature asset from the updated Play Store 1 composition.
- docs/play-store/screenshots/final/playstore2.png - rebuilt with new device frames, rounded screenshot apertures, removed camera bar, and clean TT Fors headline text.
- docs/play-store/screenshots/final/playstore2_trim-lr10.png - regenerated the paired trim export for the updated Play Store 2 image.
- docs/play-store/screenshots/final/playstore3.png - rebuilt around the centered About Us screenshot, framed stack, final placement, and trapezoid warp treatment.
- docs/play-store/screenshots/final/playstore3_trim-lr10.png - regenerated the paired trim export for the updated Play Store 3 image.
- docs/play-store/screenshots/final/playstore4.png - regenerated with the newest device-frame treatment, rounded apertures, and removed front-camera obstruction.
- docs/play-store/screenshots/final/playstore4_trim-lr10.png - regenerated the paired trim export for the updated Play Store 4 image.
- docs/play-store/screenshots/final/playstore5.png - rebuilt with clean TT Fors text and restored Piccola circular plate product art.
- docs/play-store/screenshots/final/playstore5_trim-lr10.png - regenerated the paired trim export for the updated Play Store 5 image.
- docs/play-store/screenshots/mockups/generate-feature-graphic.js - updated the feature graphic generator to build preframed device screenshots and remove the old CSS phone/camera construction.
- docs/play-store/screenshots/mockups/output/playstore1_feature-assets90_1920x1080.png - regenerated the mockup output for Play Store 1 from the updated generator.
- docs/play-store/screenshots/mockups/output/playstore1_feature-assets90_foreground_1920x1080.png - regenerated the foreground-only mockup output for Play Store 1.
- docs/play-store/screenshots/mockups/package.json - added the generate:frames script for repeatable device-frame replacement.
- docs/play-store/screenshots/mockups/replace-playstore-device-frames.js - added the reusable Sharp script for replacing Play Store 2 and Play Store 4 device frames from raw screenshots.
- docs/play-store/screenshots/raw/Android_Large/about_us_screen_large_centered.png - added the centered About Us Android Large screenshot source used by the Play Store 3 rebuild.

- mob/assets/store/feature-graphic.png - refreshed the mobile store feature graphic asset to match the regenerated Play Store 1/feature graphic output.

Follow-up Context for Future Sessions

- Future Play Store image edits should treat playstore2/playstore5 headline text as regenerated TT Fors layers where possible, not as raster overlays that merely thicken or cover existing text.
- The current device-frame aperture convention is tied to the Alla Vostra hero frame source and should preserve the rounded screenshot mask, visible black bezel corners, and no-camera-bar top edge.
- Play Store 3 depends on the centered About Us raw screenshot and its approved warped/framed layout; edits should avoid restoring the pre-existing device stacks that were explicitly removed.
- Play Store 5 should continue using the Piccola circular plate source for the product image, not the side-view cheeseboard or generic portfolio cheeseboard cutout.
- If additional Play Store screenshot revisions are needed, regenerate the full 1920x1080 asset and its 1536x1080 trim pair together so the final directory does not split into mismatched source/trim states.
- If the August 11 worklog is committed later, the expected pattern from the recent August 10 worklogs is a PDF-only commit that adds this root-level artifact without editing snapshots at the same time.

Output Artifact

- Created `alla_vostra_worklog_august11.pdf` at the repository root as the latest customary PDF worklog for the Alla Vostra project.
- Used the established root-level worklog filename pattern because this was the first August 11 worklog artifact, so no part suffix was required.
- Preserved the current letter-size PDF convention, footer format, concise opening summary, section ordering, bullet-heavy documentation style, files-touched detail, and output-artifact close.
- This PDF records the August 11 Play Store artwork refresh through commit `ba897f9` and intentionally excludes unrelated project, portfolio, or future-session context outside the Alla Vostra source work window.
