

Alla Vostra Mobile App Work Log - June 13, 2026

- Compiled summary for June 13, 2026 - focus: Shop-screen product-overlay conversion, background1 integration, button-state polish, overlay navigation, non-scrollable Shop restructuring, and final top-offerings row alignment.
- Includes tracked Git work from the June 13 mobile-app session, local Expo tunnel diagnosis, final overlay interaction rules, and the current Shop-screen baseline after the page was reduced to one fixed, non-scrollable screen.
- Generated automatically on June 13, 2026 after the top three Shop offering boxes were wrapped, resized, aligned, and tuned around the compact Deliciousness awaits screen.

Source Materials Processed

- Read the existing root-level worklog PDFs, especially June 12 and June 10, to preserve the established PDF naming convention, letter-page geometry, title wording, footer cadence, section order, and compact bullet-heavy report style.
- Reviewed the current app and web project snapshots generated on Fri Jun 12 17:52:39 EDT 2026, including the instructions to preserve existing spacing, alignment, fonts, images, layout, animations, and relative positioning unless specifically asked to change them.
- Reviewed June 13 Git history, including commits 0e68bc9, 8691990, ab99ab4, e06bd36, 71d829d, d57d354, 6d13a34, f411149, and ffd8506.
- Checked current source hotspots in mob/app/shop.js and mob/styles/shopStyles.js after the final Shop row alignment pass.
- Confirmed parser validation was repeatedly run against mob/app/shop.js and mob/styles/shopStyles.js with @babel/parser during the June 13 work.

Current Baseline to Preserve

- Primary app work remains in /Users/prahlin/alla_vostra/mob with Expo Router, Expo SDK 54, React Native 0.81.5, and Expo Go on the Samsung S21 FE as the practical runtime target.
- The Shop screen is now a fixed, non-scrollable one-screen experience. The visible page stops at the orange I'm ready ! / Back button and no longer renders the older lower shipping stack, divider, Our offers heading, or product-card list below it.
- Shop still uses the shared Alla Vostra cream and orange vocabulary, but now also shows background1.png in the same very-low-opacity, heavily zoomed, far-scroll locked visual state used on the main screens.
- The product detail overlay is opened from the I'm ready ! button, not from the truck image. Opening always defaults to Piccola, while the overlay nav can switch to Sei Perfetto or Buon Natale.
- The top three cartoon offering rows use square transparent PNG assets: truck1_square.png, bargain_square.png, and soflo_square.png. Their rows are carefully centered and button-aligned, so future spacing changes should be small and deliberate.

Main Goals We Worked Toward

- Turn the June 12 experimental truck popup into a practical product/offering overlay with product image, header, paragraph, price, and BUY action.
- Make the I'm ready ! and Back states visually distinct through triangle direction, color inversion, orange/white treatments, and precise triangle sizing and position.
- Add a product nav bar inside the overlay so Piccola, Sei Perfetto, and Buon Natale can be viewed without leaving the popup.
- Remove redundant lower Shop content and make the Shop route function as a single designed screen rather than a scroll page.
- Refine the top three cartoon offering rows so the images, text boxes, borders, labels, and spacing feel premium and visually balanced.

Work Completed - Shop Background and Top Screen

- Replaced the plain Shop cream background with background1.png while preserving the overlay window color. The image was tuned to mimic the locked far-scroll state from the main screens: low opacity, strong zoom, and a position visually tied to the orange top bar.
- Aligned the background image relative to the orange top nav, then adjusted zoom and vertical placement so it did not clip awkwardly at the top while still reading as the same app-wide background texture.
- Replaced the earlier slogan stack with a compact Dream Avenue title, eventually settling on Deliciousness awaits... centered above the three offering rows.
- Tuned the Deliciousness-to-truck gap twice, reducing it from the larger earlier spacing to a much tighter final top gap.

Work Completed - I'm Ready / Back Button States

- Moved the overlay trigger from the truck image to the I'm ready ! button and made the button show Back whenever an overlay is open.
- Added a white right-facing triangle to the I'm ready ! button and a left-facing triangle to the Back state, with several small vertical and horizontal adjustments so the triangles align optically with the button text.
- Inverted the Back button content: white button fill, orange Back text, orange left triangle, and orange side bands inside the rounded button edges.
- Matched the Back triangle sizing and position to the desired visual weight, increasing it by 50%, then fine-tuning its vertical offset down to single-pixel adjustments.
- Applied the larger triangle principle to the I'm ready ! state while later reverting the experimental white side bands on the closed button.
- Removed the black stroke from the I'm ready ! text after the button state became visually clear through color and triangle direction.

Work Completed - Product Overlay Conversion

- Replaced the original truck-in-overlay experiment with a product detail surface containing a Piccola header, product image, product paragraph, price, and BUY button.
- Reworked overlay content positioning so the Piccola image sits centered under the header, with the paragraph and action column beneath it using the remaining lower space.
- Justified and repeatedly retuned paragraph text size, row bottom padding, and action-column alignment so the bottom paragraph line remains visible and the BUY button bottom aligns with the paragraph bottom.
- Added the \$ price text above the BUY button, then reduced the price and BUY button sizes by 25% after the product action area became too dominant.
- Changed the Piccola copy to a shorter product paragraph ending with found in South Florida and later set final product prices to Piccola \$55, Sei Perfetto \$66, and Buon Natale \$77.
- Kept the overlay window itself white with a black border, while adding orange fill zones at the top and bottom portions of the rounded box.

Work Completed - Overlay Navigation

- Created an orange nav bar near the top of the overlay box with three tappable product entries: Sei Perfetto, Piccola, and Buon Natale.
- Made the nav item colors stateful. The active product segment is orange with white text, while inactive segments invert to white with orange text.
- Swapped nav item order and color treatments during tuning, then removed unwanted rounded corners from the inactive white nav segments so they do not cut through the overlay border.
- Added activeOverlayProductName state and rewired the overlay header, image, paragraph, price, and BUY payment action to use the currently selected product.

- Preserved Piccola as the default overlay page whenever I'm ready ! opens the overlay, even after another product was tapped during a previous open session.

Work Completed - Single-Screen Shop Restructure

- Removed all assets rendered below the I'm ready ! button: the old large vertical shipping stack, plus sign, down arrow, lower Soflo block, PageDivider, Our offers heading, and mapped product cards.
- Deleted the now-unused local ShippingBlock and ProductCard helper components from mob/app/shop.js after the lower content was removed.
- Replaced the Shop Animated.ScrollView with a fixed View, eliminating vertical scrolling on the Shop route while leaving the header overlay and popup behavior intact.
- Renamed the old scroll style usage to a fixed content container in mob/styles/shopStyles.js.

Work Completed - Top Three Offering Rows

- Text-wrapped the top three offering boxes exactly after 12 hour, \$10, and M. Dade, producing two-line labels: 12 hour / shipping, \$10 / delivery, and M. Dade / Broward.
- Changed the three boxes from fixed-width pills to fit their wrapped text horizontally, then doubled internal padding so the smaller labels still felt substantial and premium.
- Increased the top three cartoon images by 25% and scaled the matching boxes by 25%, including min heights, radii, padding, and label font size.
- Halved the vertical gaps between the three image/box rows, then reduced the remaining gaps another 20% so the stack became compact enough for the non-scrollable screen.
- Centered each image-plus-box row as a whole, then introduced consistent image and button slots so all three boxes align horizontally to the \$10 delivery box.
- Made final tiny optical nudges after alignment: bargain image 1px left and Soflo image 1px right, with the button column left untouched.

Expo Tunnel Diagnosis

- Diagnosed the Android Expo Go loading problem separately from Shop implementation work.
- Confirmed Metro was healthy locally at 127.0.0.1:8081/status and on LAN at 192.168.12.33:8081/status.
- Confirmed Android bundle export could complete successfully with npx expo export --platform android --output-dir /tmp/alla-vostra-expo-export --clear.
- Found the current tunnel path was failing through the exp.direct/ngrok layer with ERR_NGROK_3200 endpoint offline, even though local Metro itself was not the failed part.
- Noted expo-doctor warning about expo-constants as a direct peer dependency for expo-router, but treated it as separate from the tunnel endpoint failure because npm ls showed expo-constants present transitively.

Validation and Checks Performed

- Ran repeated @babel/parser checks after Shop edits. The final checks passed for mob/app/shop.js and mob/styles/shopStyles.js.
- Used rg and line-numbered file reads to verify active style names, stale references, and the exact overlay/top-row code paths before making scoped changes.
- Checked that obsolete references such as Animated.ScrollView, scrollContent, ProductCard, ShippingBlock, PageDivider usage, and Soflo-specific old button-margin logic were removed from the active Shop render path.
- Confirmed current Git history for June 13 documents the Shop overlay, background, nav, non-scrollable restructuring, and top offering-row refinements.

Files Touched / Added During June 13

- Primary implementation files changed throughout the day: mob/app/shop.js and mob/styles/shopStyles.js.
- Generated June 12 worklog artifact at the start of the June 13 tracked work: alla_vostra_worklog_june12.pdf.
- No new image asset files were created during the June 13 Shop implementation pass; the day reused the square cartoon mockups created on June 12.
- This final worklog generation creates alla_vostra_worklog_june13.pdf at the repository root.

Important Follow-Up Context

- The Shop screen is now highly tuned by exact pixels. Future changes to image sizes, row gaps, box padding, or overlay dimensions should update both visible styles and measurement constants when layout math depends on them.
- The top offering rows now rely on image slots and button slots. If a single row needs an optical nudge, prefer moving the image slot or row transform without breaking the aligned button column.
- The overlay nav is product-aware, but all three BUY buttons currently share the same payment URL. If product-specific checkout links become available, update each product object rather than special-casing the BUY handler.
- Piccola remains the overlay default on open by design. Do not preserve the previously active product between overlay sessions unless the user explicitly asks for that behavior.
- Expo tunnel failures should be separated from local Metro health. If tunnel loading fails again, check the exp.direct/ngrok endpoint state before assuming the app bundle or Shop code is broken.

Output Artifact

- Created this worklog PDF: alla_vostra_worklog_june13.pdf.
- No external PDF package was installed; this artifact was generated with a standard-library PDF writer in the same plain-text-readable spirit as the prior daily worklogs.
