

Alla Vostra Mobile App Work Log - July 8, 2026

Compiled summary for Wednesday, July 8, 2026 - focus: Android Small/Large emulator-session automation, Shop overlay keyboard behavior, Android Standard-relative proportional scaling for buttons, form fields, typography, sticky cart badge geometry, Android Small Shop preview concessions, Stripe timeout handling, and filled-cart divider polish across Android Small, Android Standard, and Android Large targets.

Generated automatically after reviewing the July 7 Part 1, Part 2, and Part 3 worklog PDFs, the July 6 Android setup worklog, the July 8 Git commits on main, current mobile source state, the new emulator startup script, local syntax and whitespace checks, and emulator screenshot/log context from the active Android testing workflow.

Includes tracked Git work from commits cc944f6, f410845, 36346cf, a4a2e15, and 6f22f23. Those commits continued the responsive Shop and overlay polishing started on July 6 and July 7 while keeping the physical Android Standard device as the visual proportionality reference.

Source Materials Processed

- Read the July 7 Part 3 root-level worklog PDF with pdftotext to preserve the established same-day worklog style, including compact opening summary, source-material section, baseline section, goals, work-completed sections, validation section, files-touched list, follow-up context, and output-artifact close.
- Read the July 7 Part 1, July 7 Part 2, and July 6 PDFs to keep the July 8 artifact aligned with the existing Android test-matrix language, Shop overlay terminology, page count, and root-level naming convention.
- Reviewed July 8 Git history from 21:34 through 23:44 Eastern time, covering emulator automation, cart overlay divider consistency, keyboard pop-up behavior, Android proportional scaling, Stripe timeout protection, and center divider replacement in the filled-cart overlay.
- Reviewed commit stats and touched files for cc944f6, f410845, 36346cf, a4a2e15, and 6f22f23 rather than relying only on chat context.
- Reviewed current source context in mob/app/shop.js, mob/components/StickyCartButton.js, mob/styles/shopStyles.js, mob/styles/stickyCartStyles.js, mob/utils/responsiveLayout.js, mob/utils/stickyButtonLayout.js, mob/utils/stripePayments.js, and start_alla_vostra_android_all.sh.
- Checked current repository status before PDF generation. The source tree was clean before this artifact was created; only ignored local folders such as mob/android, node_modules, .expo, and local env files remained outside source control.
- Used git log, git show, git status, git diff --check, rg, sed, pdftotext, pdfinfo, bash -n, adb/emulator context from the session, Babel transform parsing for mobile files, and this small standard-library PDF writer; no external PDF package was installed.

Current Baseline to Preserve

- Primary app work remains in /Users/prahlin/alla_vostra/mob, using Expo Router, React Native, shared Shop cart context, Stripe payment integrations, Postmark-backed server flows, and the established Alla Vostra mobile visual system.
- The Android test matrix remains three phone classes: Android Small for cramped short-screen behavior, the user's physical Android device as Android Standard and the proportionality authority, and Android Large for tall/large spacing checks.
- Metro remains the live JavaScript server for fast reloads. Native/payment-sensitive work still needs the Alla Vostra app shell or development build behavior where Expo Go is not equivalent.
- The Shop flow remains the most layout-sensitive area: preview screen, products overlay, filled cart, contact/who form, time/when form, delivery/where form, payment form, bottom X/center/cart controls, and Android native keyboard behavior all need to be checked as one system.
- The July 7 proportional product-overlay lane and measured preview-stack logic remains the baseline. July 8 extended the same philosophy to buttons, form fields, typography, and cart divider details rather than redesigning the Shop UI from scratch.
- Android Small may receive narrow concessions when necessary to avoid clipping or cramming, but those concessions should remain explicit and should not silently weaken the Android Standard visual authority.

Main Goals We Worked Toward

- Speed up the daily Android testing loop by starting Android Small and Android Large together, waiting for Metro, reversing port 8081, launching the app, and keeping physical-device Expo testing available.
- Make Android Small and Android Large preserve the same proportional relationships seen on Android Standard for overlay action buttons, form fields, placeholder/input text, labels, headers, paragraph text, sticky cart badge text, and cart/receipt typography.
- Fix Android on-screen keyboard behavior so tapping form fields opens the keyboard naturally without leaving X, center, or cart controls floating above it and without Android Large triggering an unwanted

menu/navigation pop-up.

- Preserve product and cart overlay legibility after proportional scaling by applying targeted exceptions: smaller products-overlay text on Android Small and a hidden Shop preview headline on Android Small.
- Keep filled-cart product-entry dividers visually consistent across Small, Standard, and Large by matching side long divider thickness, opacity, placement, and center-divider treatment.
- Prevent payment setup failures from feeling like a frozen app by giving Stripe payment-sheet setup a timeout and clearer error path.

Work Completed - Android Emulator Session Automation

- Added `start_alla_vostra_android_all.sh` at the repository root to reduce the friction at the start of Android testing sessions.
- The script starts `AllaVostra_Large_Android_API_35` and `AllaVostra_Small_Android_API_34`, waits for both emulator devices to appear and finish booting, waits for Metro on `localhost:8081`, runs `adb reverse tcp:8081 tcp:8081`, force-stops and relaunches the Alla Vostra app activity, and then starts the Expo tunnel for physical Android testing.
- Kept the script explicit about local Android SDK tool paths, app package name, app activity, AVD names, and expected emulator serials so future boot issues can be diagnosed quickly.
- Removed stale tracked Play Store helper files under `prahlin/play_store` during the same tracked cleanup, leaving the current daily workflow centered on the actual Android app/emulator startup path.
- Preserved the user-facing distinction between emulators and the physical Android Standard device: Small and Large are fast visual checks, while the physical device remains the standard-format reference.
- Validated the script syntax later with `bash -n` as part of this worklog-generation pass.

Work Completed - Filled-Cart Divider Consistency

- Continued the filled-cart divider cleanup started in the July 7 cart work by focusing on short-device inconsistencies in product-entry grid lines.
- Adjusted the cart overlay product vertical-divider width so Android Small uses a real visible hairline rather than allowing a too-thin divider to disappear or look inconsistent.
- Kept the long horizontal product-entry top and bottom dividers visually consistent by preserving the intended black divider thickness and top/bottom bounds.
- Replaced the two short center vertical divider pieces in each filled-cart product entry with one long center divider matching the same visual language as the left and right long dividers.
- Matched the center divider to the side divider look: same base vertical-divider style, full opacity, same long vertical bounds, and no awkward gap between the upper and lower mini segments.
- Kept the small horizontal midline divider pieces in place because those are separate cross-dividers inside the product grid, not the vertical center divider the user wanted replaced.
- Verified the result on Android Small after reload with a filled-cart screenshot sanity check; the product-entry grid now reads more continuous and intentional.

Work Completed - Android Keyboard Behavior on Shop Forms

- Added Android keyboard visibility tracking in `mob/app/shop.js` using React Native Keyboard listeners for `keyboardDidShow` and `keyboardDidHide`.
- Used that Android keyboard visibility state to hide the Shop overlay bottom navigation/action controls while the keyboard is open, preventing the X, center button, and cart controls from floating above the keyboard on Android Small.
- Added matching keyboard visibility handling in `StickyCartButton` so the global sticky cart button also disappears on the Shop route while an Android keyboard is active.
- Preserved non-Shop sticky cart behavior and non-Android behavior by scoping the hide rule to `Platform.OS === "android"` and `pathname === "/shop"` where appropriate.
- Corrected the Android Large form-tap behavior so tapping form fields opens the slide-up on-screen keyboard instead of causing a menu/nav pop-up that blocked normal text entry.
- Kept form focus behavior tied to actual delivery/payment field state rather than introducing a separate fake keyboard surface.
- This pass improved contact/who, time/when, delivery/where, and payment-form ergonomics because those overlay screens share the same bottom-control and keyboard-interaction problem space.

Work Completed - Standard-Relative Button, Field, and Text Proportions

- Treated Android Standard as the proportionality authority for the Shop overlay system, then scaled Android Small and Android Large from the same relationships rather than from independent hard-coded values.
- Added `shopOverlayActionToStickyButtonRatio` to `mob/utls/stickyButtonLayout.js` so overlay action buttons can be sized as a stable ratio against the sticky X/cart button size.

- Updated Shop overlay Add items, Checkout, Add/Place Order, product Add, confirmation, payment Done, and related action buttons to use the action-button ratio on Android while preserving existing iOS-specific scale behavior.
- Rescaled contact, delivery, payment, dropdown, and compact form fields so field height, field gap, border radius, prompt label line-height, input line-height, placeholder text, and input text maintain the Standard relationship to the action buttons.
- Changed the shared responsive text scaler in mob/utils/responsiveLayout.js so Android font and line-height scaling follows the same button-relative curve used by the overlay controls.
- Updated sticky cart badge geometry and badge text in mob/styles/stickyCartStyles.js so the cart count remains proportional to the sticky cart button across Android Small and Android Large.
- Reworked cart receipt, grand-total, added-product, confirmation, preview, product overlay, and form text paths in mob/styles/shopStyles.js so typography no longer drifts independently of the controls it visually belongs to.
- Kept Android Large participating in the same proportional scale while avoiding arbitrary one-off Large-only typography numbers.

Work Completed - Targeted Android Small Visual Concessions

- Reversed the products-overlay font increase on Android Small only after the larger proportional text pass made product-overlay text too heavy for the cramped product screen.
- Split product-overlay text scaling from cart/confirmation text scaling so the Android Small product overlay could return to the smaller product-overlay scale without shrinking cart-empty or confirmation messaging.
- Kept product overlay button asset sizes tied to the action-button ratio while only reducing the Android Small product overlay text where clipping/crowding demanded it.
- Fixed malformed Android Small Shop preview text boxes by moving the preview pill geometry onto a dedicated preview-item scale, covering width, height, border radius, padding, chrome corners, and border width.
- Matched the three Shop preview images to the same preview-item scale as their text boxes on Android Small so the image-to-pill proportions match Android Standard and Android Large.
- Removed the "Deliciousness awaits..." preview title on Android Small only and zeroed its measured title height so the removed line did not leave reserved blank space.
- Recomputed Android Small Shop preview vertical spacing after removing the title so the three visible image/text rows and the Shop button use equal visible gaps instead of leaving the old title/margin pocket.
- These concessions were deliberately scoped to Android Small; Android Standard and Android Large keep the fuller preview/title and products-overlay typography treatment.

Work Completed - Stripe Payment Setup Resilience

- Added a 20 second timeout around Stripe payment-sheet setup in mob/utils/stripePayments.js using AbortController when available.
- Converted the timeout into a clear error message: "Stripe payment setup timed out. Check the payment server and try again."
- Wrapped Stripe createPaymentMethod handling in mob/app/shop.js so native payment-method failures show a user-facing alert and reset accepted-card state rather than bubbling as an uncaught native rejection.
- This addressed the stuck-emulator/app-freeze experience observed after trying to place an order with Stripe forms filled out.
- Kept the Stripe configuration guardrails intact: missing/invalid publishable key and missing payment-sheet endpoint still fail early through the existing configuration issue flow.
- Did not broaden payment provider behavior beyond error resilience; this was a stability and recoverability improvement for the active Shop checkout testing workflow.

Validation and Checks Performed

- Freshly ran Babel transform parsing for mob/app/shop.js, mob/components/StickyCartButton.js, mob/styles/shopStyles.js, mob/styles/stickyCartStyles.js, mob/utils/responsiveLayout.js, mob/utils/stickyButtonLayout.js, and mob/utils/stripePayments.js before generating this PDF; no parse errors were reported.
- Freshly ran bash -n start_alla_vostra_android_all.sh before generating this PDF; no shell syntax errors were reported.
- Freshly ran git diff --check before generating this PDF; no whitespace or patch-format issues were reported.
- Reviewed git status --short before generation; the working tree was clean before the new July 8 PDF artifact was created.
- Reviewed git status --short --ignored and confirmed local generated/ignored material remains out of

source control, including .DS_Store, mob/.env, mob/.expo, mob/android, mob/node_modules, and server/node_modules.

- Reviewed July 8 commit history and file stats directly from Git so this artifact reflects tracked source work, not only emulator screenshots or conversation notes.
- Reloaded Android Small and Android Large repeatedly during the July 8 work, using adb reverse and Expo/Metro reload behavior to verify Shop preview, product overlay, filled-cart overlay, form overlays, and keyboard behavior.
- Captured and visually reviewed Android Small screenshots during the final divider and Shop preview passes. Android Large was kept in the active emulator loop, while Android Standard remained the physical-device visual authority.
- Did not run a fresh production Android release build, Play Store screenshot render, or full Expo export during this worklog-generation step. The recorded validation is Git/history review, syntax/whitespace checks, emulator reloads, screenshot review, and live Android behavior from the development session.

Files Touched During July 8

- Android emulator automation: start_alla_vostra_android_all.sh. This script starts Android Small and Android Large, waits for Metro, reverses port 8081, launches the app, and starts the Expo tunnel for the physical device.
- Shop implementation and layout math: mob/app/shop.js. This includes keyboard visibility handling, bottom-control hiding while the keyboard is open, preview measured-stack spacing, preview item sizing, overlay action/button sizing, form/dropdown runtime scaling, cart divider geometry, Stripe card-method error handling, and filled-cart center divider replacement.
- Sticky cart behavior and geometry: mob/components/StickyCartButton.js and mob/styles/stickyCartStyles.js. These include Android keyboard hiding on the Shop route and badge proportionality to the sticky cart button.
- Shop visual styles: mob/styles/shopStyles.js. This includes button, form, preview, product overlay, cart overlay, confirmation, receipt, divider, and typography proportionality updates.
- Shared responsive utilities: mob/utls/responsiveLayout.js and mob/utls/stickyButtonLayout.js. These provide Android button-relative text scaling and the Shop overlay action-to-sticky-button ratio.
- Stripe helper resilience: mob/utls/stripePayments.js, adding timeout behavior for payment-sheet setup.
- Removed tracked Play Store helper remnants under prahlin/play_store as part of the July 8 emulator-session cleanup path.

Follow-Up Context

- Continue checking Android Standard physically after broad proportional changes. Android Small and Android Large emulator screenshots are useful, but the physical device remains the visual source of truth for proportions.
- If Android Small Shop preview needs further tuning, keep changes scoped to the preview-item scale, image/text row spacing, and hidden-title rule rather than weakening the Standard/Large layout.
- If product-overlay text needs future adjustment, preserve the separation between products-overlay text and cart/confirmation text so a Small-only concession does not shrink unrelated overlay messages.
- If form fields feel off after the proportional scaling pass, adjust the Standard-relative ratios instead of returning to independent Small/Large constants.
- If Stripe setup still appears stuck, check the payment-sheet endpoint and server logs first; the app should now surface the timeout instead of silently hanging forever.
- If filled-cart divider polish continues, preserve the current rule: center, left, and right long vertical dividers should share the same look and vertical placement, while the small horizontal cross-dividers are separate grid details.

Output Artifact

- This final worklog generation creates alla_vostra_worklog_july8.pdf at the repository root.
- The filename uses the established root-level convention without a part suffix because the July 8 work is represented as one daily artifact.
- No external PDF package was installed; this artifact was generated with a small standard-library PDF writer in the same plain-text-readable spirit as the prior daily worklogs.
- Created this daily worklog PDF: alla_vostra_worklog_july8.pdf.
