

Alla Vostra Mobile App Work Log - July 5, 2026 Part 1

Compiled summary for Sunday, July 5, 2026 Part 1 - focus: Google Pay, Apple Pay, and PayPal payment-path wiring, delivery/contact validation hardening, filled-cart divider polish, and the About Us screen magnification/signature refinements.

Generated automatically after reviewing the July 4 worklog PDF, the post-July-4 Git commit chain, current mobile source files, local syntax checks, whitespace checks, and the clean working-tree state before this artifact was created.

Includes tracked Git work after the July 4 worklog artifact: commits 8431aac, 61dd996, 5ff29ca, 026dd7e, d10edd7, c4e3082, and e76de85. Together these commits moved the payment overlay toward real wallet coverage, strengthened invalid-input feedback, and gave the About Us screen a more personal, polished presentation.

Source Materials Processed

- Read the July 4 root-level worklog PDF with pdftotext to preserve the established title cadence, compact opening summary, source-material section, baseline section, goal list, bullet-heavy work sections, validation section, follow-up context, and output-artifact close.
- Reviewed Git history after the July 4 worklog commit, including commit messages, changed files, and patch stats for Google Pay, Apple Pay, PayPal, validation, filled-cart divider, and About Us work.
- Checked current source context in mob/app/shop.js, mob/styles/shopStyles.js, mob/app/contact.js, mob/styles/contactStyles.js, mob/app/aboutus.js, mob/styles/aboutusStyles.js, mob/app/_layout.js, and mob/styles/typography.js.
- Confirmed that this Part 1 window remained concentrated in the mobile app. No Vercel backend route, Stripe webhook, or Postmark server implementation was changed during this worklog period.
- Used git log, git show --stat, git show --name-only, git status, rg, sed, pdftotext, pdfinfo, node --check, git diff --check, and a small standard-library PDF writer; no external PDF package was installed.

Current Baseline to Preserve

- Primary app work remains in /Users/prahlin/alla_vostra/mob, using Expo Router, React Native, shared Shop cart context, Stripe secure card capture, Postmark-backed messaging, and the existing Vercel backend established earlier.
- The Payment overlay now has dedicated action paths for card, Google Pay, Apple Pay, and PayPal, while the app still relies on Stripe-native secure handling for actual card details instead of storing raw payment credentials locally.
- Google Pay and Apple Pay are wired in the mobile source, but both still depend on proper native development/build testing before final store-release confidence. Apple Pay additionally depends on the iOS development/build environment and merchant configuration.
- PayPal currently uses a secure redirection-style flow and explanatory in-app popup copy rather than embedding PayPal login or payment fields inside the Alla Vostra overlay.
- Delivery, contact, and main-screen form fields now share a more visible validation language: pinkish invalid fields, shake feedback where appropriate, and red explanatory messages for special validation cases.
- The About Us screen now participates in the same in-view grow/diminish motion language as Home and Products, but treats image, paragraph one, paragraph two, and paragraph three/signature as separate scroll entities.

Main Goals We Worked Toward

- Make Google Pay, Apple Pay, and PayPal buttons actionable from the Payment overlay while keeping security boundaries clear and avoiding fake in-app payment fields for services that require native or external flows.
- Clarify PayPal behavior with user-facing copy that explains redirection to PayPal's official website for secure login and payment completion.
- Make delivery address errors feel unmistakable by shaking and pinkening invalid State, City, ZIP, and touched-empty fields.
- Limit service-area choices to Miami-Dade and Broward where the checkout flow requires local delivery, while keeping the field proportions consistent with the established overlay form layout.

- Apply the same invalid-field feedback globally enough that main-screen Contact fields no longer feel disconnected from the shop overlay validation system.
- Improve the About Us screen so its text and signature feel intentional, personal, and visually connected to the app's main-screen magnification behavior.

Work Completed - Google Pay Payment Path

- Implemented Google Pay functionality tied to the Google Pay button on the Payment overlay.
- Connected the Google Pay action into the existing Stripe payment flow rather than creating a separate insecure payment processor path.
- Preserved the user-facing Payment overlay button structure while making the Google Pay button actionable on tap.
- Kept the work scoped to mobile source changes, with the expectation that final verification will occur once the Android development build is available.
- Maintained the earlier Stripe security baseline: the app should request payment confirmation through Stripe-supported flows rather than collecting or storing wallet credentials itself.

Work Completed - Apple Pay Payment Path

- Implemented Apple Pay functionality tied to the Apple Pay button on the Payment overlay.
- Connected Apple Pay to the Stripe payment setup already used by the app, keeping payment processing centralized instead of introducing a second backend.
- Left the implementation ready for native iOS build testing, because Apple Pay cannot be fully validated inside ordinary Android Expo Go usage.
- Kept Apple Pay handling in mob/app/shop.js and avoided unrelated styling churn while adding the payment behavior.
- Preserved card-entry behavior separately so Apple Pay does not disturb the Stripe card popup/checkmark path.

Work Completed - PayPal Redirect Flow

- Implemented PayPal button behavior on the Payment overlay, making PayPal actionable on tap.
- Added a PayPal-specific popup instead of trying to fake PayPal login or PayPal form fields inside the app overlay.
- Revised the popup text to explain that paying with PayPal requires redirection to PayPal's official website, with a paragraph break before asking whether to continue.
- Kept the popup copy security-oriented and plain: the user is told they are leaving for PayPal's official website for secure login and payment completion.
- Discussed the return-to-app expectation after PayPal processing, noting that a full production PayPal flow requires a configured return/deep-link or backend-assisted order completion path.

Work Completed - Delivery Validation and Service Area

- Added a delivery-address screen shake when a faulty State dropdown option is picked.
- Added ZIP validation for Miami-Dade County and Broward County, Florida, with the same red-message trigger when a five-digit ZIP is outside the supported delivery area.
- Slightly reddened invalid form fields and dropdowns, then expanded the effect so the whole field area becomes pinkish rather than only its edges.
- Added touched-empty validation: when a user taps a field, leaves it without entering a character, and exits, the same pinkish empty-field treatment appears.
- Cleared the empty-field pink effect once a field is tapped again, while preserving invalid-value messages until the input becomes valid.
- Converted City from a free text field into a dropdown, first considering all Florida city values, then narrowing the menu to Miami-Dade and Broward city/place names so the list remains usable.
- Adjusted the City / State / ZIP row so City is as wide as the First name style field, State keeps its protected dropdown width, and ZIP narrows to fit the row.

Work Completed - Contact Validation and Main-Screen Forms

- Applied the pinkish invalid-field logic globally across mobile app form fields, including main screens rather than only Shop overlays.

- Updated the main Contact screen so fields can show the same touched-empty pink treatment and invalid email feedback.
- Added Contact overlay email validation: if the email field does not include an @ character, it turns pinkish, triggers the shake effect, and shows a red message reading Email must include a '@' character.
- Placed that red email message below the gift checkbox while keeping the gift checkbox vertically centered relative to the recipient-name field.
- Protected the existing Contact/Postmark send path from this validation work by keeping behavior focused on the field state and visible feedback layer.

Work Completed - Filled-Cart Divider Polish

- Updated the top and bottom long horizontal dividers of filled-cart product entries to use a darker, clearer line treatment matching the scrollbar-border look requested for that overlay pass.
- Kept the change limited to the long entry dividers and avoided rearranging the sensitive product-entry 2x2 cell content.
- Preserved the existing mini in-grid divider logic and the earlier filled-cart grid layout refinements from July 4.
- Maintained the filled-cart overlay as a layout-sensitive area where divider changes should stay narrow and visually checked after each pass.

Work Completed - About Us Text and Signature Content

- Added Warm regards, above the signature name on the About Us screen.
- Removed the dash before Janny and split Owner/Operator of Alla Vostra onto its own line.
- Added paragraph-sized empty whitespace before the signature section and another matching gap after the Owner/Operator line.
- Changed Janny from the earlier Dream Avenue treatment to the Great Vibes custom font only for that specific text, leaving the rest of the About Us copy in the existing body typography.
- Imported and registered Great Vibes in the Expo font loader, added the font asset under mob/assets/fonts/great_vibes, and exported a dedicated signatureFont constant.
- Doubled the Janny font size after review, increased line height to prevent vertical clipping, horizontally centered only Janny, and added horizontal padding so the left edge of the script J flourish does not disappear.
- Kept Warm regards, and Owner/Operator of Alla Vostra left-aligned as part of the signature block while centering only the owner's name.

Work Completed - About Us Magnification and Spacing

- Applied the Home/Products in-view magnification concept to the About Us screen.
- Split the About screen into separate magnifying scroll sections: image, paragraph one, paragraph two, and paragraph three with the signature block.
- Corrected the paragraph measurement problem after paragraph one and two initially did not visibly grow/diminish. The fix removed an extra wrapper so the paragraph sections measure in the same scroll coordinate space as Home and Products.
- Doubled the vertical gaps between image and paragraph one, paragraph one and paragraph two, and paragraph two and paragraph three after the section magnification began working.
- Preserved the internal paragraph-three/signature spacing while changing only the requested section-to-section vertical gaps.

Validation and Checks Performed

- Freshly ran node --check on mob/app/shop.js, mob/styles/shopStyles.js, mob/app/contact.js, mob/styles/contactStyles.js, mob/app/aboutus.js, mob/styles/aboutusStyles.js, mob/app/_layout.js, and mob/styles/typography.js before generating this artifact.
- Freshly ran git diff --check before generating this artifact; no whitespace or patch-format issues were reported.
- Reviewed git status before generating this artifact and confirmed the working tree was clean.
- Reviewed post-July-4 commit stats and changed file lists for commits 8431aac through e76de85, confirming the tracked work touched mobile app and style files plus the new Great Vibes font asset.

- Did not run a fresh Expo export during this PDF-generation step. The recorded checks here are local syntax/whitespace checks plus Git history and source review.

Files Touched During July 5 Part 1

- Payment overlay actions, wallet button behavior, PayPal popup, delivery service-area validation, Contact overlay validation, and related Shop state handling: mob/app/shop.js.
- Shop overlay styling for PayPal popup, validation states, red messages, and filled-cart divider line presentation: mob/styles/shopStyles.js.
- Main Contact screen invalid-field behavior and touched-empty validation state: mob/app/contact.js and mob/styles/contactStyles.js.
- About Us screen scroll-section magnification, signature layout, spacing, and text grouping: mob/app/aboutus.js and mob/styles/aboutusStyles.js.
- Custom Great Vibes font registration and shared typography constant: mob/app/_layout.js, mob/styles/typography.js, and mob/assets/fonts/great_vibes/GreatVibes-Regular.ttf.

Follow-Up Context

- Google Pay still needs real native Android development-build testing outside ordinary Expo Go before release confidence.
- Apple Pay still needs real native iOS development-build testing and final merchant configuration checks before release confidence.
- PayPal redirection is a useful current implementation, but a production-grade PayPal order flow should eventually use a backend-created PayPal order plus return/deep-link handling.
- The delivery service-area city and ZIP lists should be revisited before launch if Alla Vostra expands or narrows its delivery radius.
- The About Us Great Vibes signature should be visually checked on Android and iOS after bundling, because large script fonts can vary in clipping and baseline behavior across platforms.

Output Artifact

- This final worklog generation creates alla_vostra_worklog_july5_part1.pdf at the repository root.
- The filename uses the established root-level convention and includes part1 because this captures the first July 5 work window after the July 4 daily worklog.
- No external PDF package was installed; this artifact was generated with a small standard-library PDF writer in the same plain-text-readable spirit as the prior daily worklogs.
- Created this daily worklog PDF: alla_vostra_worklog_july5_part1.pdf.
