

Alla Vostra Mobile App Work Log - July 30, 2026

Compiled summary for Thursday, July 30, 2026 - focus: moving the question overlay and sticky question button into the Shop screen only, rebuilding the five swipe-left guide pages into centered visual slides, adding product, quantity, payment, and delivery imagery, preserving the shop overlay dimming/chrome behavior, validating on Android Large, and refreshing generated project snapshots for Alla Vostra.

Generated in continuity with the established Alla Vostra worklog cadence: compact opening summary, source-material review, baseline, goals, grouped work-completed sections, validation, files touched, follow-up context, and output-artifact close.

This artifact is named `alla_vostra_worklog_july30.pdf` because the repository Eastern-time clock used for generation was Thursday, July 30, 2026. It records the committed July 30 mobile-app session that followed the July 29 PDF worklog and culminated in commit 18a3246.

Source Material Reviewed

- Reviewed all 48 pre-existing root-level Alla Vostra worklog PDFs from May, June, and July to preserve the current naming convention, letter-size PDF output, title rhythm, section order, bullet-heavy implementation notes, validation language, files-touched detail, and output-artifact ending.
- Extracted text from the full worklog series with `pdftotext` and checked recent PDF metadata with `pdfinfo`. The newer logs consistently use Source Material Reviewed, Baseline, Goals, grouped Work Completed sections, Validation, Files Touched, Follow-Up Context, and Output Artifact sections.
- Read the July 25, July 27, July 28 Part 2, and July 29 logs in detail because they define the current Play Store asset workspace, project snapshot workflow, Android Large validation habit, question overlay background, and current daily worklog style.
- Confirmed the July 29 PDF was added by `b4bce07` and that the next source window was the clean committed diff from `b4bce07` to `18a3246`: Added shop-only guided question overlay slides.
- Compared `b4bce07..18a3246` with `git diff --stat` and `git diff --name-status`. The window covered five changed files, including `RootLayout`, `ShopScreen`, `QuestionOverlay`, and refreshed app/web snapshot files.
- Inspected the current source around `mob/app/_layout.js`, `mob/app/shop.js`, and `mob/components/QuestionOverlay.js` to describe the implementation from code rather than from conversation memory alone.
- Reviewed the product overlay `ADD/counter` code, payment-method card icon and accepted badge code, `Piccola` product image path, and `bargain_square_whitefill.png` usage in the order-confirmation screen so the guide slides could be documented as reusing existing app visuals.
- Confirmed the U.S. Eastern-time shell clock before generation and preserved the root-level `alla_vostra_worklog_monthday.pdf` naming pattern used by the surrounding worklogs.

Baseline Status Before July 30 Work

- The prior July 29 work had already introduced the sticky question/help button, question overlay state, shop-style cream/orange overlay frame, header-aware dimming, and five swipe-left placeholder guide pages.

- Before this session, the question overlay and sticky question button were still mounted from RootLayout, making them global even though the intended help flow belonged to the Shop preview experience.
- The guide pages existed as single-number bubble/title screens, but slides still needed richer visual content, larger centered bubble treatment, deliberate line wrapping, and stronger vertical spacing control.
- The Shop overlay already contained the source visual language needed for the guide assets: Piccola product imagery, overlay chevrons, ADD button, quantity counter, payment card method icon, green accepted check badge, and the bargain confirmation image.
- Android Large remained the active visual reference. The user continued to evaluate spacing, visual weight, and transform-based scaling through AVD screenshots rather than by code inspection alone.
- No backend endpoint, Stripe payment server behavior, Postmark email path, Play Console listing, native package identifier, or production release setting was part of this July 30 implementation scope.

Goals for July 30

- Restrict the white question-mark bubble and its overlay to the Shop preview screen only while preserving the existing five-slide overlay flow, dimming, and orange/cream frame.
- Keep RootLayout dimming behavior correct after removing the global question overlay mount, so non-Shop routes do not treat question-overlay state as active UI chrome.
- Build slide 1 into a Browse Grazingboards visual guide using the Piccola product image and product-overlay chevrons, with centered bubble, text, and image-row verticality.
- Build slides 2 and 3 around the real product ADD button and quantity counter visuals, including accurate counter proportions and distinct emphasis states for quantity selection versus adding to cart.
- Bring slides 4 and 5 into the same centered guide layout before inserting their checkout and delivery visuals.
- Reuse the payment-method credit-card button, accepted-check badge, and order-confirmation bargain image instead of inventing unrelated placeholder graphics.
- Validate the result repeatedly on Android Large, favoring visual screenshots for line wrapping, scale, spacing, and proportion checks.

Work Completed - Shop-Only Question Overlay Mounting

- Removed QuestionOverlay and StickyQuestionButton imports and rendering from mob/app/_layout.js, ending the global mount introduced during the previous question-overlay pass.
- Added an isShopQuestionOverlayVisible guard in RootLayout so screen fading, AppHeader dimming, and Android status-bar dimming only respond to the question overlay when the current path is /shop.
- Imported QuestionOverlay and StickyQuestionButton into mob/app/shop.js and rendered both directly inside ShopScreen, keeping the help affordance scoped to the shopping preview and overlay surface.
- Added closeQuestionOverlay to the ShopScreen cart context destructure and registered an unmount cleanup effect so leaving the Shop screen closes any open question overlay.
- Preserved the existing shop overlay frame, dim layer, orange top and bottom fills, and dismiss pressable behavior while moving ownership of the UI to the Shop screen.

- Kept the repository clean after committing the shop-only mount change, with 18a3246 as the source state described by this worklog.

Work Completed - Centered Five-Slide Guide Layout

- Reworked all five guide labels into deliberate two-line strings: Browse / Grazingboards, Pick Your / Quantity, Add To / Cart, Complete Your / Checkout, and Your Delivery / Is Coming!.
- Increased the guide number bubble scale from half-size to full sticky-button scale and scaled the internal TT Fors Black numbered SVG to match the enlarged bubble.
- Added shared stacked-layout logic so every guide slide uses centered bubble placement, centered title text, and a reserved bottom asset row instead of the older left-bubble/right-text row.
- Computed the available cream-area height below the orange top band and above the bottom band, then used that space to anchor a consistent bubble/title/asset vertical stack.
- Kept the text treatment consistent across slides with larger guide label font and line-height values, numberOfLines protection, adjustsFontSizeToFit, and centered alignment.
- Preserved swipe-left-only navigation and overlay reset behavior so reopening the question overlay still returns users to slide 1.

Work Completed - Slide 1 Product Browse Visual

- Added Image support and imported piccolaProduct so slide 1 could display the same Piccola grazing board asset used by the product overlay.
- Added QuestionOverlayChevron to reuse the existing product-overlay chevron shape and scale it into the slide 1 image row.
- Sized the Piccola image row from the overlay cream-area height and applied the enlarged image-row asset scale requested during the visual iteration loop.
- Centered the slide 1 number bubble above the Browse / Grazingboards title while maintaining bubble, text, and image verticality.
- Positioned the left and right chevrons relative to the image row and overlay edges so the product image reads as the same browseable product-preview concept used elsewhere in Shop.

Work Completed - Slides 2 and 3 Quantity and ADD Guide Assets

- Added reusable QuestionGuideQuantityTriangle and QuestionGuideQuantityControls helpers to reproduce the product overlay ADD button and vertical quantity counter inside the question guide.
- Reused ButtonShadowPlate, piccolaOverlayBuyButton styles, green button gradients, quantity-box styling, and existing orange gradient values so the guide visuals stay aligned with the live product overlay.
- Corrected the guide counter proportions after studying the Android Large product overlay: the visible triangle slots now match the white quantity-box width, and triangle height uses the displayed 18.78 / 55.5 ratio rather than the wider native SVG ratio.
- Kept the slide 2 and slide 3 ADD/counter group size as transform-based visual scaling, so the underlying component proportions remained stable while the guide artwork appeared larger.
- Set slide 2 to the reverse-visibility state requested by the user: a muted ADD button and active high-visibility counter showing quantity 1.
- Kept slide 3 in the original state: high-visibility ADD button, low-visibility zero counter, and the same centered Add To / Cart title treatment.

- Verified the slide 2 and slide 3 states on Android Large screenshots after the visual-state split.

Work Completed - Slides 4 and 5 Checkout and Delivery Visuals

- Brought slides 4 and 5 into the centered guide layout first, leaving the bottom asset row reserved until the checkout and delivery visuals were added.
- Added QuestionGuidePaymentCardMethodIcon using the same card SVG geometry as PaymentCardMethodIcon from the payment overlay.
- Added QuestionGuideAcceptedCheckIcon and QuestionGuidePaymentAssets to render the debit/credit card method square above the green accepted check badge, matching the payment-method screen concept after card info is accepted.
- Added the bargain_square_whitefill.png image to slide 5, matching the bargain image used by the order-confirmation screen after the user is thanked for placing an Alla Vostra order.
- Increased the slide 4 credit-card button and slide 5 bargain image with transform-based scale values rather than changing the underlying button or image size props, following the user correction to scale without changing props.
- Kept the slide 4 accepted-check badge as a separate asset below the scaled credit-card button so the stack still reads as payment method first and submitted/accepted state second.
- Verified both slide 4 and slide 5 on Android Large after adding the assets and again after switching the requested enlargement to transform scaling.

Work Completed - Android Large Visual Iteration

- Reused the Android Large emulator workflow established in earlier logs, including adb reverse, force-stop, deep-link route launches, question-bubble taps, swipe-left inputs, and screencap output.
- Captured temporary Android Large screenshots for slide 1, slide 2, slide 3, slide 4, and slide 5 during the guide-asset loop. These screenshots were used as visual validation artifacts and were not committed as runtime assets.
- Deep-linked into the Piccola product overlay while studying the real product counter relationship, card/check imagery, and confirmation bargain art path.
- Used Android Large screenshots to confirm line wraps, centered placement, image-row scale, counter proportions, reverse-visibility emphasis, and transform-scaled slide 4/5 assets.
- Kept the verification targeted to the visual area under active development rather than running unrelated backend, payment, or Play Console flows.

Work Completed - Project Snapshot Refresh

- Refreshed alla_vostra_APP_PROJECT_SNAPSHOT.txt after the shop-only question overlay and five-slide guide work so the generated project memory captured the current mobile source tree and changed files.
- Refreshed alla_vostra_WEB_PROJECT_SNAPSHOT.txt in the same pass, keeping the root project-memory pair current with the committed source state.
- Left the snapshot updates as generated documentation/context artifacts rather than runtime behavior changes.
- Did not add new committed screenshot PNGs or Play Store marketing image outputs during this July 30 source pass.

Validation and Checks Performed

- Confirmed the working tree was clean at HEAD 18a3246 before generating this July 30 PDF artifact.
- Reviewed git log, git show --stat, git show --name-status, git diff --stat, and git diff --name-status for b4bce07..18a3246 to confirm the exact source and generated snapshot scope covered by this worklog.
- Ran git diff --check against the clean current source state before PDF generation; it produced no whitespace or patch-format warnings.
- Ran a Babel transform check for mob/components/QuestionOverlay.js with babel-preset-expo; the file transformed successfully after the final committed implementation.
- Used pdftotext across all existing root-level worklog PDFs and pdfinfo on recent logs to match the current letter-size PDF convention, metadata rhythm, section cadence, and output-artifact wording.
- Validated the slide changes through Android Large AVD screenshot review during implementation, including slide 2 reverse visibility, slide 3 unchanged ADD/counter state, slide 4 payment assets, and slide 5 bargain asset.
- Did not rerun a full Expo export, EAS build, Play Console upload, Stripe live-payment test, Postmark delivery test, or iOS validation as part of this source/UI documentation pass.

Files Touched During July 30

- mob/app/_layout.js - removed the global QuestionOverlay and StickyQuestionButton mount, added shop-path gating for question-overlay dimming, and kept non-Shop screen fade/header behavior from reacting to shop-only help UI.
- mob/app/shop.js - imported the question overlay and sticky question button, rendered them from ShopScreen, and closed the question overlay when leaving the Shop screen.
- mob/components/QuestionOverlay.js - expanded the guide into five centered visual slides, added Piccola product imagery, product chevrons, ADD/counter helpers, payment card/check helpers, bargain image support, hard-wrapped labels, transform-based scaling, and slide-specific visibility states.
- alla_vostra_APP_PROJECT_SNAPSHOT.txt - refreshed generated app project snapshot context after the source changes.
- alla_vostra_WEB_PROJECT_SNAPSHOT.txt - refreshed generated web/root project snapshot context after the same pass.
- alla_vostra_worklog_july30.pdf - created by this worklog-generation pass as the latest root-level PDF artifact.

Follow-Up Context

- If future guide-slide visuals need more refinement, the next likely tweaks are scale, vertical gap, and asset-row alignment on Android Large rather than new overlay architecture.
- Slide 4 currently presents the card method square and accepted check as separate guide assets; if the user wants exact payment-screen spacing, compare against a live accepted payment-method state after entering card details.
- Slide 5 uses the same bargain image as the order-confirmation screen and is visually scaled by transform, so any future size adjustment should preserve the underlying image dimensions unless the user asks otherwise.

- The question overlay is now intentionally shop-only. Reintroducing it to other routes would require rechecking RootLayout dimming, AppHeader spotlight behavior, and sticky-button visibility rules.
- Snapshot files remain generated memory artifacts. If they become noisy in future commits, consider reviewing the snapshot-generation filters separately rather than editing the generated output by hand.

Output Artifact

- Generated PDF: alla_vostra_worklog_july30.pdf.
- Location: repository root, alongside the existing Alla Vostra worklog PDFs.
- Format: letter-size PDF, generated with a lightweight standard-library PDF writer using the same plain-text-readable style as the recent project worklogs.
