

Alla Vostra Mobile App Work Log - August 10, 2026 (Part 1)

Compiled summary for Monday, August 10, 2026 (Part 1) - focus: post-August 1 Play Store marketing asset polish, feature-graphic typography and screenshot-lineup updates, Play Store 2 delivery-copy replacement, Play Store 4 screenshot replacement, raw screenshot additions, snapshot refresh, commit sync, and current documentation artifact generation for Alla Vostra.

Generated in continuity with the established Alla Vostra worklog cadence: compact opening summary, source-material review, baseline, goals, grouped work-completed sections, validation, files touched, follow-up context, and output-artifact close.

This artifact is named `alla_vostra_worklog_august10_part1.pdf` because the repository U.S. Eastern-time date used for generation was Monday, August 10, 2026, and no earlier August 10 Part 1 worklog PDF existed. It records the work window after `alla_vostra_worklog_august1_part1.pdf` and commit `19764a0`, through the current synced source state at `e0526ea`.

Source Material Reviewed

- Reviewed all 51 pre-existing root-level Alla Vostra worklog PDFs from May, June, July, and August 1 to preserve the project naming convention, section order, letter-size PDF output, bullet-heavy implementation notes, validation language, files-touched detail, and output-artifact close style.
- Used `alla_vostra_worklog_august1_part1.pdf` as the primary style anchor because it is the newest existing worklog, a seven-page letter PDF with the current standard-library generator metadata and the most recent Play Store / closed-testing context.
- Rechecked July 30 and July 31 extracted worklog text to preserve the newer daily-log rhythm around source review, baseline, goals, grouped implementation sections, validation, file inventory, follow-up notes, and artifact close.
- Confirmed the repository was synced and clean before this documentation artifact was generated, with HEAD at `e0526ea` Updated Play Store marketing assets on main after `19764a0` generated the August 1 Part 1 PDF.
- Inspected the `e0526ea` commit metadata and changed-file list to document the exact post-August-1 source window instead of relying only on conversation memory.
- Reviewed `docs/play-store/screenshots/mockups/generate-feature-graphic.js` for the final feature graphic configuration: screenshot lineup, Dream Avenue brand typography, TT Fors badges, right tagline stack, badge positioning, final 1024x500 exports, and object-fit behavior.
- Checked current image dimensions for the final Play Store assets and raw screenshot additions with sips, including 1024x500 feature graphics, 1920x1080 regular Play Store frames, 1536x1080 trim frames, and 1440x3120 Android Large screenshot sources.
- Reviewed the refreshed `alla_vostra_APP_PROJECT_SNAPSHOT.txt` and `alla_vostra_WEB_PROJECT_SNAPSHOT.txt` change presence in the synced commit to keep this worklog aligned with the current project snapshot convention.

Baseline Status Before August 10 Part 1

- August 1 Part 1 had already completed Android Small and Large overlay polish, splash/guide parity, confirmation-screen rating CTA work, Play Store metadata and asset submission work, app-icon and feature-graphic finalization, and closed testing Alpha release 1.0.1 build preparation.
- After the August 1 worklog, the Play Store marketing assets were upload-ready in broad structure, but the feature graphic still needed user-directed typography, copy, screenshot ordering, badge color, badge spacing, and right-side word treatment refinements.
- The user explicitly constrained the feature-graphic work to position, color, and size changes after noticing that earlier attempts could warp or stretch screenshot assets; preserving screenshot aspect ratio became a hard visual requirement for the rest of the session.
- Play Store 2 regular and trim artwork still carried the older 10-Hour Delivery headline and needed a replacement that matched the original TT Fors face, weight, white fill, and dark stroke instead of reading like a mismatched overlay.
- Play Store 4 regular and trim artwork still needed the third device screenshot replaced with products_screen_large.png while preserving the existing device-frame composition, overlap, notch/chrome, and centered trim crop.
- The project had useful Android Large screenshots available in several places, but the final store-generator path needed reusable raw assets for about_us_screen_large.png and products_screen_large.png so future regenerations would not depend on transient manual picks.
- No mobile runtime behavior, checkout endpoint, Stripe integration, Postmark email path, production environment setting, package identifier, or closed-testing track setting was part of the August 10 Part 1 scope.

Goals for August 10 Part 1

- Rebuild the feature-graphic upload artwork with the final requested brand position, screenshot lineup, badge copy, badge color, badge spacing, right tagline scale, and middle-word kerning while keeping every screenshot/device asset visually unwarped.
- Use a word one letter longer than tasty in the right tagline, replace the relevant text with Savory, and tighten kerning only on that word without changing the surrounding Smooth and Posh treatment.
- Replace selected feature-graphic device screenshots according to the final user-approved lineup, including products_screen_large.png, about_us_screen_large.png, and additional large non-overlay screenshots already present in the repository.
- Update the delivery badges to white type and final lowercase copy: dade / broward, \$10 delivery, and next-day shipping, with the badge stack nudged upward and vertical gaps collapsed toward the visual center.
- Update Play Store 2 regular and trim variants from 10-Hour Delivery to Next-Day Delivery with matching font face, font weight, white fill, and black/dark stroke treatment.
- Update Play Store 4 regular and trim variants so the third device frame uses products_screen_large.png while preserving the existing final and trim dimensions.
- Refresh the project snapshots after the asset changes, commit and sync the source changes, then generate the next root-level PDF worklog following the established conventions.

Work Completed - Feature Graphic Generator and Play Store 1

- Updated docs/play-store/screenshots/mockups/generate-feature-graphic.js as the source of truth for the feature graphic and Play Store 1 foreground/full-background exports.
- Scaled the Dream Avenue Alla Vostra brand treatment up from the earlier baseline, moved it through the requested left/right/down nudges, and settled the final dream variant at brandLeft 15.62px, brandScale 1.375, brandNameTranslateX -26.4px, brandNameTranslateY 5.4px, and brandTop 146.17px.
- Moved the device-frame screenshot stack downward by 50px for the dream feature variant and kept the later Play Store 1 feature-assets90 export using its own deeper stack offset for the final 1024x500 crop.
- Kept screenshot rendering aspect-preserving: source screenshots remain image assets inside the phone frames, and final 1024x500 exports are produced with Sharp resize fit: cover at centered position rather than by stretching the rendered screenshots.
- Finalized the screenshot lineup from left to right as alla-vostra-large-20260729-215013.png, products_screen_large.png, manual_capture_20260716_182514.png, startup_screen.png, alla-vostra-large-20260729-214920.png, about_us_screen_large.png, and alla-vostra-large-20260729-215225.png.
- Added docs/play-store/screenshots/raw/Android_Large/about_us_screen_large.png and docs/play-store/screenshots/raw/Android_Large/products_screen_large.png as reusable 1440x3120 source screenshots for the final feature-graphic and Play Store replacement work.
- Changed all dream feature badges to white text by setting the badge color to #ffffff while retaining the TT Fors badge font family and matching the existing orange/pill visual language.
- Finalized badge copy and casing as dade / broward, \$10 delivery, and next-day shipping, including the requested lowercase Dade / Broward and Next-day shipping treatment.
- Nudged the badge stack upward in two 10px steps plus another 10px adjustment, then reduced the vertical spread again so the final badgeTop is 17.9px with gap scaling collapsed toward the center.
- Replaced the right tagline language with Smooth, Savory, and Posh, using Savory as the one-letter-longer replacement for tasty and tightening only that word through -4px letter spacing.
- Matched the right-side text rows to the top-row visual size, then scaled the entire right tagline stack down by 10 percent after the final text-size alignment so the completed stack reads less oversized in the 1024x500 upload frame.
- Regenerated final feature graphic outputs including feature-graphic-upload-1024x500.jpg, feature-graphic-upload-clean-1024x500.jpg, feature-graphic-upload-clean-1024x500.png, playstore1.png, playstore1_feature-assets90_deckdown60_extended-gradient_1024x500.png, and mob/assets/store/feature-graphic.png.
- Regenerated supporting mockup output files under docs/play-store/screenshots/mockups/output, including the Dream Avenue 1920x1080 render and the playstore1 feature-assets90 foreground/full-composite renders.

Work Completed - Play Store 2 Delivery Headline

- Updated docs/play-store/screenshots/final/playstore2.png so the top headline reads Next-Day Delivery instead of 10-Hour Delivery.
- Updated docs/play-store/screenshots/final/playstore2_trim-lr10.png from the modified regular artwork rather than editing the trim as an independent visual source.
- Refined the replacement after the first pass looked inaccurate in font face or weight, moving the headline toward the project TT Fors variable font and matching the original heavy rounded delivery type rather than leaving a generic bold overlay.
- Matched the black/dark stroke as part of the replacement pass, using a dark brown stroke treatment around the white headline so Next-Day visually belongs with the retained Delivery word and the surrounding Play Store 2 composition.
- Preserved the existing Play Store 2 background, layout, lower Delivery treatment, and 1920x1080 canvas while replacing only the outdated delivery-timing copy area.
- Regenerated the trim variant as the same centered left/right crop relationship used by the existing trim convention: 1536x1080 from the 1920x1080 source.

Work Completed - Play Store 4 Product Screenshot Swap

- Updated docs/play-store/screenshots/final/playstore4.png so the third/right device frame uses products_screen_large.png.
- Updated docs/play-store/screenshots/final/playstore4_trim-lr10.png from the completed regular artwork so the crop remains mechanically tied to the 1920x1080 source.
- Preserved the existing Play Store 4 composition around the phone frame, visible-screen mask, notch/chrome, center-phone overlap, and background gradients while changing the screenshot content.
- Used products_screen_large.png as an aspect-preserving screen replacement rather than stretching it into the phone aperture, maintaining the original 1440x3120 screenshot proportions inside the device frame.
- Kept the final regular asset at 1920x1080 and the trim asset at 1536x1080, matching the established Play Store final/trim dimensions.

Work Completed - Project Snapshots, Assets, and Sync

- Refreshed alla_vostra_APP_PROJECT_SNAPSHOT.txt after the image and generator changes so the root mobile project snapshot reflects the current synced state.
- Refreshed alla_vostra_WEB_PROJECT_SNAPSHOT.txt in the same snapshot pass, preserving the repo convention that app and web snapshots move together when the project state is updated.
- Kept the new root _alla_vostra_icon.png artifact included in the synced asset commit as part of the Play Store marketing/artwork source set.
- Committed the completed source and asset changes as e0526ea Updated Play Store marketing assets with a three-point commit body summarizing the feature graphic rebuild, Play Store 2 delivery-copy update, and Play Store 4 screenshot replacement.
- Synced the completed commit to the main branch before this worklog was generated, leaving the source tree clean at e0526ea before the new PDF documentation artifact itself was created.

Validation and Checks Performed

- Confirmed git status was clean before worklog generation and that the latest synced commit was e0526ea on main, following the August 1 worklog commit 19764a0.

- Reviewed git show --stat --name-status --format=fuller e0526ea to confirm the exact committed file list, commit date, author date, and commit-body summary used for this worklog.
- Verified final feature graphic dimensions with sips: feature-graphic-upload-1024x500.jpg, feature-graphic-upload-clean-1024x500.png, playstore1.png, and mob/assets/store/feature-graphic.png are all 1024x500 where applicable.
- Verified Play Store regular/trim frame dimensions with sips: playstore2.png and playstore4.png remain 1920x1080, while playstore2_trim-lr10.png and playstore4_trim-lr10.png remain 1536x1080.
- Verified the new raw Android Large screenshots with sips: about_us_screen_large.png and products_screen_large.png are both 1440x3120.
- During the image-editing passes, checked that Play Store 2 and Play Store 4 trim outputs matched the centered crop convention from their regular 1920x1080 sources rather than drifting as separate hand-edited derivatives.
- Visually inspected the feature graphic and replacement artwork during the iterative passes to catch distorted screenshots, copy mismatches, badge positioning issues, and font/stroke mismatches before the synced commit was finalized.
- Did not run Expo, EAS, Stripe, Postmark, Firebase, payment-server, or mobile emulator smoke tests because August 10 Part 1 changed Play Store marketing images, generator configuration, snapshots, and documentation artifacts only.

Files Touched During August 10 Part 1

- _alla_vostra_icon.png - added root artwork artifact included with the synced marketing asset update.
- alla_vostra_APP_PROJECT_SNAPSHOT.txt - refreshed app project snapshot after the asset work.
- alla_vostra_WEB_PROJECT_SNAPSHOT.txt - refreshed web project snapshot in the same documentation pass.
- docs/play-store/screenshots/final/feature-graphic-upload-1024x500.jpg - regenerated upload-ready feature graphic JPG.
- docs/play-store/screenshots/final/feature-graphic-upload-clean-1024x500.jpg - regenerated clean feature graphic JPG export.
- docs/play-store/screenshots/final/feature-graphic-upload-clean-1024x500.png - regenerated clean feature graphic PNG export.
- docs/play-store/screenshots/final/playstore1.png - regenerated Play Store 1 final asset from the revised feature-graphic composition.
- docs/play-store/screenshots/final/playstore1_feature-assets90_deckdown60_extended-gradient_1024x500.png - regenerated feature-assets90 1024x500 derivative.
- docs/play-store/screenshots/final/playstore2.png - updated delivery headline artwork from 10-Hour Delivery to Next-Day Delivery.
- docs/play-store/screenshots/final/playstore2_trim-lr10.png - regenerated matching Play Store 2 trim crop.
- docs/play-store/screenshots/final/playstore4.png - replaced the third/right device screenshot with products_screen_large.png.
- docs/play-store/screenshots/final/playstore4_trim-lr10.png - regenerated matching Play Store 4 trim crop.

- docs/play-store/screenshots/mockups/generate-feature-graphic.js - updated feature-graphic source configuration, screenshot lineup, badge text/color/spacing, brand positioning, and right tagline treatment.
- docs/play-store/screenshots/mockups/output/feature-graphic-polished-dream-avenue-1920x1080.png - regenerated Dream Avenue mockup output.
- docs/play-store/screenshots/mockups/output/playstore1_feature-assets90_1920x1080.png - regenerated full playstore1 feature-assets90 output.
- docs/play-store/screenshots/mockups/output/playstore1_feature-assets90_foreground_1920x1080.png - regenerated transparent foreground output.
- docs/play-store/screenshots/raw/Android_Large/about_us_screen_large.png - added reusable Android Large About Us screenshot source.
- docs/play-store/screenshots/raw/Android_Large/products_screen_large.png - added reusable Android Large Products screenshot source.
- mob/assets/fonts/.DS_Store - changed as incidental macOS metadata alongside the asset/font workspace.
- mob/assets/store/feature-graphic.png - synced the mobile store feature graphic asset to the regenerated 1024x500 export.
- alla_vostra_worklog_august10_part1.pdf - generated after the synced source commit as the August 10 Part 1 root-level PDF worklog artifact.

Follow-Up Context

- The current Play Store marketing asset source of truth is the synced e0526ea state plus this August 10 Part 1 documentation artifact; future image swaps should start from the generator and final regular assets rather than independent trim edits.
- Any future feature-graphic screenshot changes should continue preserving screenshot aspect ratio and avoid stretching device-frame contents, because that became an explicit quality bar during this session.
- Before another Play Console upload, visually re-check the 1024x500 feature graphic preview, the 1920x1080 screenshots, and the 1536x1080 trim variants in the console UI because Google Play presentation can crop or scale previews differently from local image viewers.
- The Next-Day Delivery copy now appears in Play Store 2 regular and trim assets, while the feature graphic badges use next-day shipping; those phrases should stay intentionally distinct unless the user later wants a unified phrase across every graphic.
- No app logic or backend release readiness changed in this session, so the previous production-readiness caveats around live payments, email delivery, environment variables, and end-to-end smoke testing still apply before public launch.
- The refreshed project snapshots reflect the new source state, but they do not replace a Play Console review of the actual final images and store listing order.

Output Artifact

- Generated the August 10 Part 1 worklog after confirming the asset commit was synced and after reviewing the complete pre-existing root-level worklog set for naming, style, structure, length, and content conventions.
- Rendered as a letter-size PDF using the same standard-library PDF-generator convention as the August 1 Part 1 worklog, including title, subject, author, creator, producer, page footers, and root-level placement.

- Location: repository root, alongside the existing Alla Vostra worklog PDFs from May, June, July, and August 1.
- Generated worklog artifact: `alla_vostra_worklog_august10_part1.pdf`
