

Alla Vostra Mobile App Work Log - June 24, 2026

Compiled summary for Wednesday, June 24, 2026 - focus: iOS parity for the Shop product, empty-cart, and filled-cart overlays; overlay dimming behavior; sticky-cart badge sizing; bottom action-button labels and triangle alignment; Android delivery/payment placeholder overlays; and a less cramped horizontal filled-cart item layout.

Generated automatically on June 25, 2026 after reviewing the recent root-level worklog PDFs, the June 24 Git commit chain, current mobile source files, project snapshots, and fresh local parser/whitespace checks.

Includes tracked Git work from commits 3285c83, bb44df1, 0693d10, 21d0ac6, 81c4d26, cf19b3b, e48051a, 6816876, and dda6b90. The implementation work after the June 23 worklog generation concentrated on making the Android-polished Shop/cart flow read correctly on iOS while expanding the checkout path into delivery and payment overlay placeholders.

Source Materials Processed

- Read recent root-level PDF worklogs, especially June 19, June 21, and June 23, with pdftotext to preserve the established title cadence, summary opening, source-material section, baseline section, bullet-heavy work sections, validation section, follow-up context, and output-artifact close.
- Reviewed the June 24 Git history from commit 3285c83 through dda6b90, including commit messages, timestamps, changed files, patch stats, and the final clean working tree state before creating this PDF artifact.
- Compared the current project context against alla_vostra_APP_PROJECT_SNAPSHOT.txt and alla_vostra_WEB_PROJECT_SNAPSHOT.txt, confirming the active mobile project remains /Users/prahlin/alla_vostra/mob.
- Checked source hotspots in mob/app/shop.js, mob/styles/shopStyles.js, mob/app/_layout.js, mob/utls/shopCartContext.js, mob/components/StickyCartButton.js, and mob/styles/stickyCartStyles.js.
- Confirmed June 24 implementation work touched six tracked mobile files: mob/app/_layout.js, mob/app/shop.js, mob/components/StickyCartButton.js, mob/styles/shopStyles.js, mob/styles/stickyCartStyles.js, and mob/utls/shopCartContext.js.
- Used git log, git show --stat, git diff --stat, rg, sed, pdftotext, node --check, git diff --check, and a small standard-library PDF writer; no external PDF package was installed.

Current Baseline to Preserve

- Primary app work remains in /Users/prahlin/alla_vostra/mob, using Expo Router and React Native as the mobile runtime surface.
- Android remains the visual reference for the Shop overlay, cart overlay, sticky cart, button language, orange/cream frame, and premium green/red shopping actions.
- The Shop experience now contains multiple overlay modes: product selection, empty/filled cart, delivery address, and payment method. These modes share the orange banner and cream interior language.
- Checkout remains a visual/front-end flow. June 24 added delivery and payment placeholder screens but did not connect a backend order endpoint, delivery scheduling service, or payment processor.

- iOS layout remains highly tuned. Small font, padding, safe-area, dimming, or triangle changes can visibly break the Android-matched look that was built up across June 23 and June 24.
- The sticky cart remains global. Its badge should stay legible and platform-balanced because it is the user's persistent signal that selected products are present.

Main Goals We Worked Toward

- Bring iOS product overlays, empty-cart overlays, and filled-cart overlays closer to the accepted Android design without redesigning Android.
- Make overlay brightness and background dimming match Android: the active overlay should be the focal point, and dimming should not bleed into open overlay regions or disappear from side margins.
- Make cart and product action buttons feel consistent across platforms, including labels, colors, font weights, triangle direction, triangle spacing, and vertical centering.
- Add the next visual steps in the order path by splitting delivery information and payment method into their own overlay screens.
- Rework filled-cart product presentation so product imagery has room to read and the counter/remove controls are grouped more intentionally.

Work Completed - June 23 Worklog Artifact

- Created `alla_vostra_worklog_june23.pdf` early on June 24 as the formal PDF record for the prior day of header, iOS, swipe, Shop preview, and cart Add items work.
- Preserved the same root-level worklog naming convention used by earlier project PDFs.
- Used that June 23 PDF as one of the style references for this June 24 worklog.

Work Completed - Product Overlay iOS Parity

- Reduced product-overlay asset sizes on iOS so product headers, product imagery, paragraph copy, icons, counters, price tags, and action controls fit closer to the Android layout.
- Refined product overlay margins and padding so the cream content area no longer felt oversized or awkwardly clipped on Apple devices.
- Matched active and inactive product-nav links more closely in size so the tab strip does not visually jump between selected and unselected products.
- Adjusted Piccola's Popular tag, ADD button, price slot, image, paragraph, and icon placement so the first product entry reads as the same design on both platforms.
- Kept the orange top and bottom banners, hairlines, and cream-body framing intact while changing only the product-overlay internal geometry needed for iOS parity.

Work Completed - Empty-Cart Overlay iOS Parity

- Adjusted the empty-cart overlay's text placement, font sizes, and asset spacing on iOS so it resembles the Android version more closely.
- Scaled the TOTAL label and dollar-figure box down after they remained too large relative to the overlay.
- Reduced and then rebalanced the Checkout button box while preserving the established Checkout font size once the text was at the desired size.

- Increased the TOTAL font weight so the receipt area retains the bolder Android-like look.
- Preserved the empty-cart message structure and visual identity while tuning the iOS dimensions around it.

Work Completed - Overlay Dimming and Background Visibility

- Fixed an iOS overlay bug where dimming bled into the top of the overlay while failing to appear on the left and right outside margins.
- Added cart overlay visibility state to shared cart context so the layout can distinguish background margins from open overlay interior regions.
- Kept low visibility from clipping into open overlay areas and kept high visibility from showing on the left/right margins that should be treated as background.
- Brought iOS overlay-to-background brightness closer to Android so the active Shop/cart frame remains the central focal point.
- Updated layout-level dimming behavior in `mob/app/_layout.js` and overlay state coordination in `mob/app/shop.js` and `mob/utils/shopCartContext.js`.

Work Completed - Filled-Cart Overlay iOS Refinements

- Reduced filled-cart overlay images, buttons, and text assets on iOS so product content avoids clipping and awkward oversized proportions.
- Adjusted product header fonts and price tags upward in controlled steps, then matched white receipt-area fonts to the same visual scale where requested.
- Prevented left-side receipt text from line-wrapping where possible, then widened and protected the left text column while keeping the final target around 60 percent of the white receipt area.
- Expanded and protected the price and quantity columns so right-side prices and quantity values do not clip.
- Boldened and enlarged product names and price tags in the cream area after the smaller iOS pass made them too light.
- Tuned the global sticky-cart badge number on iOS, including size, thickness, and vertical position, so the white quantity number inside the green circle reads closer to Android.

Work Completed - Action Buttons and Triangle Alignment

- Changed all Shop preview 'I'm ready!' button labels to 'Shop' so the action reads more directly.
- Renamed Go back to Benefits only in the product-overlay context, while cart-related contexts use Add items, View cart, or Payment depending on the active overlay.
- Matched Add items button colors to the black/white button scheme on both iOS and Android where requested, after earlier green/cart-specific experiments.
- Flipped the horizontal direction of the white triangle used beside Add items and corrected both white and black triangle vertical alignment across platforms.
- Changed button alignment logic so the triangle plus label are centered as a combined unit, leaving equal left and right padding around the combined visual group.
- Doubled the horizontal gap between button names and their triangles, then adjusted Android and iOS button font sizes separately to preserve platform balance.

- Matched the black triangle height on iOS with the other button triangles after several attempts where the visual remained unchanged.

Work Completed - Delivery and Payment Overlay Flow

- Created an Android-only empty overlay initially called payment, then renamed that address-focused step to delivery.
- Added a Delivery Address heading and form-like fields for First name, Last name, Street, Apartment/House #, City, and State.
- Made the fields solid white, adjusted the Street and Apartment/House # row proportions from 75/25 to 60/40, matched Apartment/House # font size, changed number to #, and removed the Country field.
- Changed the cart Checkout button path so tapping Checkout moves into the delivery overlay instead of ending at a placeholder button.
- Created a separate Payment overlay and moved the Payment Method heading plus Google Pay, Apple Pay, and Debit/Credit Card buttons into it.
- Changed delivery's bottom action to Payment and payment's bottom action to View cart, returning the user to the cart overlay when tapped.

Work Completed - Filled-Cart Horizontal Product Layout

- Reworked the filled-cart product display from vertical stacking into a horizontal row structure: product header/image/price, counter, and remove button.
- Increased product-row assets substantially after the first horizontal pass felt too small, then re-centered product imagery on the left half of the cream area.
- Centered the counter and red remove button together as a united pair on the right half of the available cream area.
- Protected the pre-existing left and right cream-area margins so the left/right split occurs only inside the usable interior space rather than across the entire overlay width.
- Increased the horizontal gap between the counter and remove button, then made the right-side control pair feel deliberate rather than squeezed.
- Matched the cart counter's triangle/box proportions to the product overlay's counter shape while preserving the cart trio's combined height and placement.
- Accepted the tradeoff that multiple product types may require vertical scrolling in the cart, because the larger left/right grouping improves visibility and reduces the cramped look.

Validation and Checks Performed

- Freshly ran node --check mob/app/shop.js before generating this artifact.
- Freshly ran node --check mob/styles/shopStyles.js before generating this artifact.
- Freshly ran node --check mob/app/_layout.js before generating this artifact.
- Freshly ran node --check mob/utls/shopCartContext.js before generating this artifact.
- Freshly ran node --check mob/components/StickyCartButton.js and node --check mob/styles/stickyCartStyles.js before generating this artifact.
- Freshly ran git diff --check before generating this artifact; no whitespace or patch-format issues were reported.

- Confirmed the working tree was clean before creating this June 24 PDF artifact.

Files Touched / Added During June 24

- Worklog artifact from the prior day: `alla_vostra_worklog_june23.pdf`.
- Global mobile layout and overlay backdrop behavior: `mob/app/_layout.js`.
- Primary Shop implementation: `mob/app/shop.js`.
- Primary Shop styling: `mob/styles/shopStyles.js`.
- Sticky cart component and badge styling: `mob/components/StickyCartButton.js` and `mob/styles/stickyCartStyles.js`.
- Shared cart context and overlay visibility state: `mob/utils/shopCartContext.js`.
- This final worklog generation creates `alla_vostra_worklog_june24.pdf` at the repository root.

Important Follow-Up Context

- The delivery and payment overlays are visual/front-end placeholders. They provide the intended flow shape but still need real validation, persistence, payment integration, and order submission.
- The filled-cart horizontal layout intentionally prioritizes visibility over fitting every product type without vertical scrolling. Future changes should preserve the left product lane and right control-pair concept unless the desired cart layout changes again.
- iOS overlay parity is a fragile area. Font weights, receipt columns, overlay margins, dimming boundaries, and button triangle alignment should be checked on device after every related adjustment.
- The button-label state machine now communicates overlay context: Shop for entry, Benefits for product overlay, Add items for cart return-to-products, Payment for delivery, and View cart for payment.
- The overlay dimming fix depends on accurate knowledge of when cart/shop overlay surfaces are active. Future global modal work should preserve that state handoff so iOS margins and open overlay areas do not dim incorrectly.
- The sticky-cart badge number was tuned for iOS while preserving Android. Future badge changes should be checked against both the green bubble and the orange cart button.

Output Artifact

- Created this worklog PDF: `alla_vostra_worklog_june24.pdf`.
- No external PDF package was installed; this artifact was generated with a small standard-library PDF writer in the same plain-text-readable spirit as the prior daily worklogs.
