

Alla Vostra Mobile App Work Log - June 6, 2026 (Part 1)

Compiled summary for June 6, 2026 - focus: main-screen header-state navigation hardening, intro spacing and push-frame behavior, and mosaic-style visual iteration for Home section assets (Passion, Taste, Convenience).

Includes tracked Git work completed throughout the day and terminal validation work performed during this session.

Generated automatically on June 6, 2026 at 6:28 PM .

Source Materials Processed

- Read commit history for June 6, 2026 to capture chronological implementation details and rationale from all mobile-app work sessions.
- Used repository status output to confirm baseline cleanliness before producing this log artifact.
- Inspected existing local worklog PDFs to preserve naming convention, section cadence, and document styling from prior entries.
- Included current-session terminal context for mockup generation and image-size/mode verification where applicable.

Current Baseline to Preserve

- Primary development target remained /Users/prahlin/Desktop/alla_vostra/mob with Expo Router architecture and shared AppHeader behavior across main screens.
- Main-screen swipe navigation is now guarded by header-state gates to prevent mid-transition breakage and preserve layout integrity.
- The visual identity baseline remains warm, cream-forward, and image-led with refined transitions between top hero/background treatment and main content.
- Recent mosaic styling direction for Home content imagery is now part of the active design baseline for continued refinement.

Main Goals We Worked Toward

- Eliminate recurring navigation regressions caused by swiping during unstable header middle states.
- Remove unnecessary top whitespace and content jump/reposition side effects when moving between main screens.
- Improve blend quality between background1 and top-of-content fade behavior for smoother visual transitions.
- Develop and converge on an intentional mosaic visual language for Home imagery that fits the brand mood and header palette.

Work Completed - Header-State Navigation Reliability

- Reworked main-screen navigation behavior so left/right swipes are only enabled at stable header extremes instead of the problematic middle state.
- Introduced and integrated header navigation gate logic across relevant routes/components to block unstable transition windows.
- Resolved regressions where content overlaid the header, vertical position jumped, or header state failed to return cleanly after transitions.
- Updated shared swipe/navigation utility wiring so interactions stay predictable while preserving intended carousel-like screen flow.

Work Completed - Intro Spacing and Push-Frame Behavior

- Added and integrated MainScreenIntroSpacer to eliminate needless vertical whitespace seen during navigation in the new header state.
- Adjusted main-screen push-frame/divider behavior so content aligns at the top correctly while still restoring expected spacing when returning to top.
- Applied fixes consistently across Home, Products, About Us, and Contact to avoid per-screen drift in scroll/layout behavior.

Work Completed - Background Transition Polish

- Improved blend between background1 and top main-screen content by fading background out to white while content fades in from white.
- Refined visual transition treatment in header/styles so the handoff feels smoother and less abrupt at the top boundary.

Work Completed - Mosaic Image Direction and Asset Iteration

- Generated many Passion-image variants, then selected a direction with larger mosaic tiles, cohesive warm lighting, and intentionally broken edge gaps for an artsy natural finish.
- Made missing-tile regions transparent instead of cream-filled to better preserve natural composition and brand-consistent texture.
- Extended the chosen mosaic treatment principles from Passion to Taste and Convenience for Home-screen visual consistency.
- Produced and integrated the selected Home image assets into active app behavior via index-level updates.

Validation and Checks Performed

- Verified commit-by-commit progression and affected files for June 6 work using Git history with file status details.
- Confirmed repository status clean at generation time (no pending tracked modifications in root status output).
- Ran local image comparison checks in terminal (size/mode parity and pixel-dimension confirmation) for generated mockup validation.

Files Touched / Added During June 6 Part 1 (from tracked commits)

- Modified: mob/app/index.js, mob/app/aboutus.js, mob/app/contact.js, mob/app/products.js, mob/components/AppHeader.js, mob/components/MainScreenPushFrame.js, mob/components/PageDivider.js, mob/styles/headerStyles.js, mob/styles/sharedStyles.js, mob/utls/useMainScreenSwipeNavigation.js, read_project.sh, alla_vostra_APP_PROJECT_SNAPSHOT.txt, alla_vostra_WEB_PROJECT_SNAPSHOT.txt.
- Added: mob/components/MainScreenIntroSpacer.js, mob/utls/headerNavigationGate.js, mob/utls/mainScreenScrollContext.js.
- Added image assets: mob/passion111_fab.png, mob/passion111_mos.png through mob/passion111_mos9.png, mob/taste111_mos9.png, mob/convenience111_mos9.png.

Output Artifact

- Created this worklog PDF: alla_vostra_worklog_june6_part1.pdf.
