

Alla Vostra Mobile App Work Log - August 14, 2026

Compiled summary for Friday, August 14, 2026 - focus: project-context review, Android Small AVD recovery, Worklets and edge-to-edge launch repair, Android Small shopping overlay layout corrections, checkout email validation, payment-card popup scrolling, order-confirmation spacing, tutorial step 5 alignment and Got It animation spacing, Android Large and Android Small tutorial screenshot capture, pinned emulator startup helpers, app/web snapshot refresh, synced source commit, companion portfolio screenshot assets, and current documentation artifact generation for Alla Vostra.

Generated in continuity with the established Alla Vostra worklog cadence: compact opening summary, source-material review, baseline, goals, grouped work-completed sections, validation, files touched, follow-up context, and output-artifact close.

This artifact is named `alla_vostra_worklog_august14.pdf` because the repository U.S. Eastern-time date used for generation was Friday, August 14, 2026, and no earlier August 14 root-level Alla Vostra worklog PDF existed. It records the work window after the August 12 Part 2 PDF worklog commit `3f98a63`, through the synced source state at `89b9d16` Refined Android Small tutorial, checkout, and portfolio captures.

Source Material Reviewed

- Reviewed all 57 pre-existing root-level Alla Vostra PDF worklogs from May, June, July, August 1, August 10 Parts 1-3, August 11, and August 12 Parts 1-2 to preserve the project naming pattern, section order, PDF length, validation language, files-touched inventory, and output-artifact close.
- Extracted the existing PDFs with `pdftotext` into a temporary text set and used the recent August 10, August 11, and August 12 worklogs as the closest style anchors because they define the current seven-page long-form mobile-app documentation shape.
- Inspected `pdfinfo` metadata for the newest worklogs to preserve the letter-size page convention, OpenAI Codex author, Codex standard-library PDF generator creator/producer values, footer treatment, and root-level output placement.
- Reviewed git history and used `3f98a63..89b9d16` as the source range for this narrative, with `89b9d16` already present on main and origin/main before this PDF was generated.
- Reviewed the synced commit message, name-status output, and diff stat for `89b9d16` so the worklog is grounded in actual tracked source files instead of only session memory.
- Inspected the affected mobile source files: `mob/app/_layout.js`, `mob/app/shop.js`, `mob/components/QuestionOverlay.js`, `mob/styles/shopStyles.js`, `mob/app.json`, `mob/babel.config.js`, and `mob/plugins/with-android-material-components-theme.js`.
- Inspected the new launch helpers, `launchd/com.allavostra.metro.plist`, `launchd/com.allavostra.smallavd.plist`, and `start_alla_vostra_android_small.sh`, to document the Android Small emulator-5556 recovery path.
- Checked the newly added Android Large and Android Small tutorial screenshot assets under `screenshots/alla_vostra` and `docs/play-store/screenshots/raw` so the capture work was represented alongside runtime code changes.
- Checked the neighboring portfolio repository because companion Alla Vostra tutorial images and `ProductFlowSwitcher` visual-hierarchy changes were part of the same work session, even though that repository is tracked separately from this Alla Vostra source commit.

Baseline Status Before August 14

- The August 12 Part 2 source window had already added the polished startup tutorial Got It smiley animation, Reanimated/Worklets integration, sprite atlas, final-frame hold, and Android debug rebuild verification.

- After the August 12 work, Android startup and tutorial animation were improved, but the Android Small AVD and app launch path became unstable during later screenshot and QA work, including emulator serial confusion between Android Large and Android Small.
- The user needed Android Large and Android Small tutorial screenshots saved into both the Alla Vostra repository and the portfolio repository using the established screenshot directory conventions.
- Android Small was expected to run as emulator-5556 at physical size 720x1280 and density 320, while Android Large should not be altered during the Android Small-specific repair passes.
- The Android Small visual layout showed regressions from prior Play Store-ready builds: orange header area could appear too tall, white or landscape-like top areas could push content down, shopping overlays could clip into lower navigation, and checkout overlay content could sit too high or too low.
- The checkout flow still allowed progression with an invalid contact email in some paths, and the warning could surface during payment input instead of on the contact overlay where the user expected it.
- The payment-card entry popup on Android Small could not expose all card-entry fields inside the available overlay height, creating top-overlay clipping and an inaccessible visual state.
- The order-placement confirmation mini-popup and tutorial step 5 rows needed Android Small-specific spacing refinement after the broader safe-area and overlay fixes brought the main layout back into range.
- The portfolio Alla Vostra page had a visual-hierarchy and tutorial-screenshot presentation that needed new capture assets and protected preview behavior to avoid stale or awkward screenshot compositions.

Goals for August 14

- Keep Android Small fixes scoped to emulator-5556 and the Android Small viewport without changing Android Large geometry, density, or capture behavior.
- Restore the app launch path after the native Worklets error and make the user-provided adb force-stop and am start command work consistently for `com.allavostra.app.MainActivity`.
- Correct Android edge-to-edge and safe-area behavior so Android Small no longer showed the extra white top band, oversized orange header, or vertically displaced shopping assets.
- Repair checkout progression so invalid contact email values are flagged on the contact screen, colored as invalid, and block Continue until the email is valid.
- Prevent nested payment and confirmation overlays from leaking the Place order button visually or interactively above the active popup.
- Make the Android Small payment-card input popup scroll vertically so card fields and controls remain reachable inside the overlay window.
- Compress and rebalance the Android Small order-placed mini-popup rows so the success text, image, brand, and rating CTA sit evenly with small top and bottom breathing room.
- Align tutorial overlay step 5 with steps 1-4, then refine the final animation and Got It button spacing so the button no longer sits awkwardly close to the bottom edge.
- Capture the tutorial sequence for Android Large and the full five-step Android Small overlay set, save the files under established Alla Vostra and portfolio destinations, and verify dimensions and visual content.
- Refresh project snapshots, commit and sync the completed Alla Vostra work, then generate the latest root-level PDF worklog following the established documentation conventions.

Work Completed - Android Small AVD and Runtime Recovery

- Kept testing centered on emulator-5556 for Android Small after the user clarified the desired serial and app launch command.
- Verified the Android Small emulator identity through adb devices, wm size, and wm density, confirming the target remained 720x1280 at density 320.
- Added start_alla_vostra_android_small.sh as a repeatable launcher that checks the AllaVostra_Small_Android_API_34 AVD, binds it to emulator-5556, waits for boot completion, reverses the Metro port, and starts com.allavostra.app/.MainActivity.
- Added launchd/com.allavostra.smallavd.plist so the Small AVD can be started through launchctl with the intended AVD name, port 5556, host GPU, no snapshot load, and no boot animation.
- Added launchd/com.allavostra.metro.plist so Metro can be started from the mobile project with the required Node, Android SDK, and no-telemetry environment.
- Changed mob/babel.config.js from react-native-reanimated/plugin to react-native-worklets/plugin so the installed Worklets runtime and the Babel transform matched the app state and avoided the native-parts-not-initialized failure.
- Kept runtime validation focused on adb force-stop plus am start for com.allavostra.app/.MainActivity rather than broad device commands that could affect Android Large.

Work Completed - Android Edge-to-Edge and Safe-Area Repair

- Enabled Android edge-to-edge in mob/app.json so the current Android layout path explicitly opts into the expected system-window behavior.
- Simplified mob/app/_layout.js Android system-bar handling by removing unsupported translucent status-bar and transparent background calls while preserving the orange navigation-bar theme and light icon style.
- Moved the native Android system-bar setup in mob/plugins/with-android-material-components-theme.js to run after super.onCreate and made the plugin replace older generated snippets cleanly.
- Introduced Android Small visual-height compensation in mob/app/shop.js so sticky cart placement, shipping preview available height, and delivery dropdown bounds use the corrected visual window height instead of the clipped raw window height.
- Applied the same Android Small visual-height compensation in mob/components/QuestionOverlay.js so startup tutorial overlay geometry and stacked guide rows compute against the usable Android Small visual area.
- Restored the Android Small header and overlay placement enough for the user to confirm the broad displacement issue was fixed before the smaller checkout and tutorial spacing passes continued.

Work Completed - Checkout Validation and Nested Overlay Behavior

- Added normalized contact-email validation in mob/app/shop.js using a full address pattern instead of only checking for the @ character.
- Blocked the contact overlay Continue action when the email field is missing or invalid, marked invalid fields as touched, shook the overlay, and displayed Enter a valid email address on the contact screen.
- Added a recovery path that routes the user back to the contact overlay for email correction if an invalid email is discovered from a later payment or confirmation action.
- Prevented payment acceptance and order confirmation from proceeding when the contact email is invalid, clearing accepted card state where needed and closing payment popups before returning to contact correction.
- Hid the Place order button while payment-card details, PayPal, or order-confirmation popups are visible so the button no longer renders above or steals taps through nested

overlays.

- Added Android z-index/elevation protection to the payment checkout button style so visible overlay controls preserve the intended touch and depth order.

Work Completed - Android Small Payment and Confirmation Layout

- Made the payment-card details ScrollView show a vertical scroll indicator on Android Small and enabled the form content to scroll inside the white popup window.
- Changed the Android Small card-form frame and Stripe card block styles so the native CardForm retains its needed height without bleeding outside the clipped popup viewport.
- Adjusted payment-card popup overflow behavior so Android Small clips the popup shell correctly while allowing the inner content to scroll down to the Done button.
- Wrapped the order-placed success state in a dedicated confirmationOverlayOrderPlacedStack and added Android Small-only spacing rules for a space-evenly vertical layout.
- Reduced the Android Small order-placed text size, bargain image size, Alla Vostra brand size, and rating-button height so the success rows fit with small top and bottom gaps inside the plain white mini-popup.
- Kept the larger/non-small Android and iOS confirmation styling on the existing baseline paths by guarding the new sizing with isSmallAndroidViewport and isSmallAndroidPlatform checks.

Work Completed - Tutorial Step 5 Alignment and Got It Spacing

- Updated mob/components/QuestionOverlay.js so Android Small tutorial step 5 uses the same reference-row math as tutorial steps 1-4 for the numbered bubble and two-line header placement.
- Preserved the current grinning thumbs-up storyboard visual on tutorial step 5 instead of reverting to the earlier smirking face frame that the user explicitly rejected.
- Added a startup-only effect that leaves step 5 on the final storyboard frame when the overlay is presented, while keeping the actual Got It playback path gated by the button press.
- Lifted the Android Small step 5 storyboard slightly and lifted the Got It control row more, preserving a minimum animation-to-button gap while keeping the button away from the lower curve of the overlay.
- Kept the Android Small step 5 refinements isolated to the delivery-guide preview path so tutorial steps 1-4 and non-small overlays do not inherit the final-step compression.
- Verified the step 5 layout on emulator-5556 with screenshots after the spacing change, including the settled final smiley/thumbs-up frame and the improved Got It bottom margin.

Work Completed - Tutorial Screenshot Capture and Asset Placement

- Captured Android Large tutorial screenshots earlier in the session and saved them under screenshots/alla_vostra/Android_Large plus docs/play-store/screenshots/raw/Android_Large/tutorial_screen_large.png.
- Captured the full five-step Android Small startup tutorial overlay set from emulator-5556 after the layout repairs, using the clean startup tutorial state rather than an accidental Google app or launcher screen.
- Saved timestamped Android Small captures under screenshots/alla_vostra/Android_Small as alla-vostra-small-tutorial-step-01 through step-05 with the 20260814-203300 timestamp.
- Saved stable Android Small raw files under docs/play-store/screenshots/raw/Android_Small as tutorial_screen_small_step_01.png through tutorial_screen_small_step_05.png plus tutorial_screen_small.png for the final step.
- Copied the same Android Small tutorial set into the neighboring portfolio project under

public/images/alla-vostra/tutorial, including timestamped and stable step-numbered filenames.

- Updated public/images/tutorial_screen_small.png in the portfolio project to match the final Android Small step 5 capture, and matched file hashes between the Alla Vostra raw final-step image and the portfolio final-step copies.
- Visually checked all five Android Small captures after the first bad capture attempt was discarded, confirming steps 1-5 displayed the intended tutorial overlays and not a Google sign-in screen or stale splash state.

Work Completed - Portfolio Companion Presentation

- Updated the companion portfolio Alla Vostra tutorial image folder with Android Large and Android Small tutorial captures so the case-study page has current overlay screenshots available.
- Updated the portfolio ProductFlowSwitcher companion work to support composed screenshot previews, protected image overlays, visual-hierarchy fade masks, and the new mosaic mockup asset for the Alla Vostra visual hierarchy presentation.
- Added preview targeting support in the portfolio ScreenshotPreviewLayer for composed screenshot surfaces so clicking the protected composition opens the intended preview instead of a lower-level image layer.
- Added CSS support in the portfolio for protected image compositions, cutout masks, and overlay layers used by the Alla Vostra visual-hierarchy screenshots.
- Refreshed the portfolio project snapshot in the companion repository, but kept this worklog scoped to the Alla Vostra root-level PDF artifact because the portfolio repository has its own worklog series and separate git history.
- Noted during documentation that the portfolio companion files remained pending in the separate portfolio working tree, while the Alla Vostra repository itself was already synced at 89b9d16.

Work Completed - Project Snapshots, Commit, and Sync State

- Refreshed alla_vostra_APP_PROJECT_SNAPSHOT.txt after the Android Small runtime, checkout, overlay, launch-helper, and screenshot work.
- Refreshed alla_vostra_WEB_PROJECT_SNAPSHOT.txt so the root project snapshot set stayed aligned with the current repository contents and new screenshot assets.
- Committed the Alla Vostra work as 89b9d16 Refined Android Small tutorial, checkout, and portfolio captures, with the Android Small code fixes, launch helpers, refreshed snapshots, and screenshot assets included.
- Confirmed the Alla Vostra branch was clean and aligned as main...origin/main before this PDF generation pass began.
- Kept this documentation artifact separate from the synced implementation commit so it records the completed source state in the same PDF-only follow-up pattern used by the recent August worklogs.

Validation and Checks Performed

- Confirmed adb devices showed emulator-5556 as the available Android Small target during the final screenshot and runtime verification passes.
- Confirmed emulator-5556 reported Physical size: 720x1280 and Physical density: 320 after the Android Small layout and capture work.
- Restarted Alla Vostra with adb -s emulator-5556 shell am force-stop com.allavostra.app and adb -s emulator-5556 shell am start -n com.allavostra.app/.MainActivity during the validation passes.
- Ran Babel parser checks against mob/app/shop.js, mob/components/QuestionOverlay.js, and mob/styles/shopStyles.js after the Android Small checkout and tutorial layout edits; the

files parsed successfully.

- Ran git diff --check over the edited source files during the implementation pass; no whitespace errors were reported for the final code diffs.
- Sampled logcat for ReactNativeJS and AndroidRuntime fatal errors after app restarts; the checked samples were quiet after the final changes.
- Verified tutorial step 5 row alignment against earlier tutorial steps through screenshot and UIAutomator-style bounds checks during the layout pass.
- Visually inspected the final Android Small tutorial captures for steps 1 through 5 and discarded the earlier bad capture set that accidentally recorded the Google app.
- Verified all final Android Small tutorial images in the Alla Vostra and portfolio destinations were 720x1280 PNG files.
- Verified the final step 5 Android Small file hash matched across the Alla Vostra timestamped capture, Alla Vostra raw tutorial_screen_small.png, portfolio tutorial_screen_small.png, and portfolio public/images/tutorial_screen_small.png destinations.
- Checked npm --prefix mob run lint during the implementation pass and confirmed the mobile package did not define a lint script, so no lint command was available to run.
- Did not run a production EAS build, signed release/AAB build, Stripe live payment path, Postmark email delivery test, Firebase rule check, Play Console upload, or public portfolio deployment as part of this August 14 source window.

Files Touched During August 14

- alla_vostra_APP_PROJECT_SNAPSHOT.txt - refreshed the app snapshot after Android Small runtime, overlay, launch-helper, and screenshot work.
- alla_vostra_WEB_PROJECT_SNAPSHOT.txt - refreshed the web/root snapshot after the new screenshot assets and project-state changes.
- mob/app.json - enabled Android edge-to-edge behavior for the current app configuration.
- mob/app/_layout.js - simplified Android status/navigation bar setup while preserving the app startup and provider layout path.
- mob/babel.config.js - switched the Babel plugin to react-native-worklets/plugin to match the native Worklets runtime requirement.
- mob/plugins/with-android-material-components-theme.js - updated the generated MainActivity system-bar setup insertion and cleanup behavior.
- mob/app/shop.js - added email validation, contact-overlay correction flow, Android Small visual-height layout compensation, nested payment overlay hiding, payment-card acceptance guards, and Android Small order-confirmation layout wiring.
- mob/styles/shopStyles.js - added Android Small-specific payment-card scroll clipping, confirmation success stack spacing, smaller success assets, rating-button sizing, and payment button depth protection.
- mob/components/QuestionOverlay.js - added Android Small visual-height compensation, step 5 reference-row alignment, final-frame state handling, and step 5 Got It animation/button spacing refinements.
- launchd/com.allavostra.metro.plist - added the Metro launchd helper for the Alla Vostra mobile project.
- launchd/com.allavostra.smallavd.plist - added the Android Small AVD launchd helper for AllaVostra_Small_Android_API_34 on port 5556.
- start_alla_vostra_android_small.sh - added the repeatable emulator-5556 startup and app launch helper script.
- docs/play-store/screenshots/raw/Android_Large/tutorial_screen_large.png - added the stable Android Large tutorial raw screenshot artifact.
- docs/play-store/screenshots/raw/Android_Small/tutorial_screen_small.png and

- tutorial_screen_small_step_01.png through tutorial_screen_small_step_05.png - added the stable Android Small tutorial raw screenshot set.
- screenshots/alla_vostra/Android_Large/alla-vostra-large-tutorial-20260814-*.png - added the Android Large tutorial capture set created during the screenshot workflow.
- screenshots/alla_vostra/Android_Small/alla-vostra-small-tutorial-20260814-175902.png and alla-vostra-small-tutorial-step-01 through step-05-20260814-203300.png - added the Android Small tutorial captures.
- screenshots/alla_vostra/alla-vostra-tutorial-capture-20260814-*.png and alla-vostra-tutorial-capture-small-20260814-175902.png - added the root-level tutorial capture copies created during the screenshot workflow.
- alla_vostra_worklog_august14.pdf - generated after the synced August 14 source commit as the latest root-level PDF worklog artifact.

Companion Portfolio Files Touched Outside This Repository

- app/ScreenshotPreviewLayer.tsx - added composed-preview targeting for Alla Vostra protected screenshot compositions.
- app/globals.css - added protected image composition, cutout, and overlay styling for the visual-hierarchy screenshot treatment.
- app/projects/alla-vostra/ProductFlowSwitcher.tsx - updated the Alla Vostra visual-hierarchy flow presentation with fade masks, protected overlays, composed screenshot preview support, and the new mosaic mockup source.
- portfolio_PROJECT_SNAPSHOT.txt - refreshed the companion portfolio snapshot after the Alla Vostra page changes.
- public/images/alla-vostra/tutorial/ - received the Android Large tutorial images and the full five-step Android Small tutorial set used by the portfolio case-study page.
- public/images/alla-vostra/taste111_mos9_bright_soft_mockup_tile_blend_both_mockup.png - added the new mosaic mockup asset used by the Alla Vostra visual-hierarchy sequence.
- public/images/tutorial_screen_large.png and public/images/tutorial_screen_small.png - updated stable portfolio image copies for the tutorial screenshots.

Follow-up Context for Future Sessions

- The synced Alla Vostra source truth for this work window is 89b9d16 on main/origin/main; this August 14 PDF should be committed afterward as a documentation-only artifact if following the recent worklog pattern.
- The neighboring portfolio repository still had pending companion changes at documentation time, so it should be reviewed, committed, and synced separately under that project before a portfolio deployment or portfolio worklog is generated.
- Future Android Small QA should continue using emulator-5556 at 720x1280 and density 320, and should avoid broad emulator commands that can accidentally affect Android Large.
- If the Worklets native initialization error returns, check the installed APK and native rebuild state first; force-stop/start alone may not refresh native dependency wiring.
- If Android Small top spacing regresses, inspect edge-to-edge, safe-area, and visualWindowHeight calculations before changing emulator geometry or density.
- Checkout retesting should include invalid email blocking on the contact overlay, card-entry Done behavior, Place order visibility under nested popups, and the order-placed success mini-popup on Android Small.
- The payment-card popup scroll fix improves visibility but does not replace Stripe payment processor, backend order, Postmark email, or production environment smoke testing before a public launch.
- The tutorial screenshot assets should be treated as current Android Small and Android Large capture references for portfolio and Play Store documentation work until the tutorial artwork changes again.

- If additional screenshot capture work is needed, start from the startup tutorial overlay state and visually verify step 1 before batch capture to avoid saving launcher or Google app screens by mistake.

Output Artifact

- Created `alla_vostra_worklog_august14.pdf` at the repository root as the latest customary PDF worklog for the Alla Vostra project.
- Used the established root-level worklog filename pattern because this was the first August 14 worklog artifact, so no part suffix was required.
- Preserved the current letter-size PDF convention, footer format, concise opening summary, section ordering, bullet-heavy documentation style, files-touched detail, validation language, follow-up context, and output-artifact close.
- This PDF records the August 14 Android Small repair, checkout validation, tutorial spacing, screenshot capture, launch helper, snapshot refresh, and synced source state through commit 89b9d16, with companion portfolio work noted as a separate-repository follow-up lane.
