

Alla Vostra Mobile App Work Log - June 18, 2026

Compiled summary for Thursday, June 18, 2026 - focus: Shop overlay cart behavior, product-entry quantity controls, cart-overlay layout, live item totals, checkout placeholder geometry, product copy polish, and final cart summary alignment.

Generated automatically on June 18, 2026 after reviewing the existing June 15 and June 17 worklog PDFs, the current mobile Shop source files, parser checks, and the June 18 Git commit for the preliminary cart shopping screen.

Includes tracked Git work from commit 24a5890, which concentrated the June 18 implementation in `mob/app/shop.js` and `mob/styles/shopStyles.js`.

Source Materials Processed

- Read the June 15 and June 17 root-level PDF worklogs with `pdftotext` to preserve the established title cadence, source-material section, compact bullet style, validation section, follow-up context, and output-artifact close.
- Reviewed the June 18 Git commit 24a5890, including the commit message, file list, and code footprint: 1171 lines changed in `mob/app/shop.js` and 261 lines changed in `mob/styles/shopStyles.js`.
- Checked current Shop source hotspots for `cartOverlay`, `overlayCart`, `overlayProduct`, `quantity`, `Checkout`, and `product-copy` logic to confirm this worklog reflects the active implementation.
- Confirmed the working tree was clean before creating this artifact, so the app state described here reflects the committed June 18 baseline.
- Used `pdftotext`, `git status`, `git log`, `git show`, `rg`, `sed`, `node --check`, and `git diff --check` locally; no external PDF package was installed for this artifact.

Current Baseline to Preserve

- Primary app work remains in `/Users/prahlin/alla_vostra/mob`, with Expo Router and React Native as the mobile runtime surface.
- The Shop screen still opens into the same product overlay shell, but the right-side product controls now behave like a front-end cart-entry system instead of a simple BUY/payment action.
- Piccola, Sei Perfetto, and Buon Natale now share the same quantity-control and confirmation logic, while retaining product-specific copy, prices, images, and badges.
- The cart button in the overlay action row now has real local behavior: it toggles from the last product-entry overlay into a cart overlay and back again.
- Checkout remains a visual placeholder button for a future backend/payment flow; no payment processor or order API was connected on June 18.

Main Goals We Worked Toward

- Turn the orange cart placeholder into the beginning of an actual cart overlay while preserving the premium Shop overlay frame.
- Generalize the Piccola quantity and confirmation experiment across all three product-entry screens without breaking the pixel-tuned product layout.
- Make confirmed picks persist into a cart view, show miniature product information, and calculate per-item and grand totals from current quantities.

- Keep zero-quantity and unconfirmed states visually quiet so only confirmed product selections feel active.
- Leave a clear front-end contract for future backend checkout work: product, quantity, confirmation, row total, grand total, and Checkout action.

Work Completed - Product Copy and Overlay Entry Text

- Updated Piccola copy to say the board can be found anywhere around South Florida, with the sentence left without a closing period as requested.
- Updated Sei Perfetto copy around the phrase effortlessly captures and being surrounded by, then removed the closing period.
- Updated Buon Natale copy around generous cheese board, large gatherings, joyous celebrations, and festive holiday tables, then removed the closing period.
- Kept the product-entry description rendering intact, including the bold Serving lead-in and the existing overlay paragraph layout.
- Preserved POPULAR as green, ON SALE as red, and the no-badge state for Sei Perfetto while the quantity/cart logic was generalized.

Work Completed - Product Entry Quantity Logic

- Replaced Piccola-only quantity state with product-keyed overlayProductQuantities and overlayProductConfirmations state so every product can track quantity and confirmed status.
- Added createInitialOverlayProductState to initialize matching per-product objects for quantities and confirmations.
- Made tapping ADD set the active product quantity to 1 when empty and immediately mark that product confirmed, changing the plus box into the checkmark state.
- Kept the up/down triangle controls available for every product, capped quantity increases at 9, and prevented decrements below 0.
- Made triangle adjustments after confirmation clear the confirmation state again, so changing a picked amount reopens the decision state before the cart is updated.

Work Completed - Add / Number / Triangle Visual States

- Kept the ADD button in place while the quantity box and up/down triangles sit beside it for the active product-entry screen.
- Matched the ADD button and number-box sizing through several passes, including the final smaller grouped controls and hairline-number treatment.
- Kept the zero state quiet: the number box remains visible, the 0 uses the same subdued black look as the hairline border, and triangle controls use the muted treatment.
- Kept the above-zero state active: number boxes and triangles use stronger visibility unless the product has already been checked/confirmed.
- Preserved the white plus/check box behavior: pending selections show a green plus in a full-visibility white box; confirmed selections show the green checkmark box and add the product to the cart count.

Work Completed - Shopping Cart Button Count

- Connected the small count badge on the cart button to the number of confirmed product entries rather than a hard-coded or single-product value.

- Made tapping any ADD button add that product to the cart list and update the cart-button count when the product is confirmed.
- Preserved the cart button image placement while allowing the mini green count bubble to sit on the top-right corner of the orange cart button.
- Kept the count bubble circular, with the value centered and visually detached enough to read as a quantity marker.
- The badge now reflects how many product-entry screens have a confirmed checkmark, not the sum of units across those products.

Work Completed - Cart Overlay Shell

- Added a cart-overlay mode inside the existing Shop overlay window, using the same overall size, placement, rounded shell, and top/bottom orange bands as the product overlay.
- Kept the cart overlay cream in the main content area and retained the orange top and bottom bands with their hairline borders.
- Made tapping the shopping-cart button open the cart overlay and tapping it again return to the last product-entry overlay the user was viewing.
- Made the Go back button return from the cart overlay to the product-entry overlay instead of closing the whole Shop overlay or returning to Home.
- Allowed the cream cart area to scroll vertically so multiple selected products can stack without being trapped under the fixed bottom summary area.

Work Completed - Cart Product Rows

- Added cart rows for confirmed products in the order they were first selected, so the first choice appears at the top and later choices stack below it.
- Displayed each selected product image on the cart overlay at 50% of the product-entry image size, top-left aligned within the cart content structure.
- Added each product name above its miniature image, centered and reduced from the product-entry header size through several font-size passes.
- Added each product price under its image and then simplified that image-side price area so it shows only the price tag.
- Inserted subtle gray divider lines only between additional cart entries, with spacing tuned so the next product starts with the same visual rhythm as the first item under the orange band.

Work Completed - Cart Row Quantity Controls

- Copied the relevant number-box and triangle control behavior from the product-entry screen into each cart product row.
- Kept cart-row quantity controls fully visible when quantity is above 0 and low-visibility only when the row quantity reaches 0.
- Prevented the product image from disappearing immediately when a cart-row quantity hits 0, so the user can still see what was changed while still inside the cart overlay.
- Added pruning logic so products left at quantity 0 are removed from the cart list when leaving the cart screen, rather than disappearing mid-edit.
- Adjusted the cart quantity asset trio repeatedly: widened counter boxes, matched triangle proportions, avoided compressed triangle height, then reduced the trio by 25% for balance.

Work Completed - Cart Bottom White Banner

- Added a fixed white banner directly above the bottom orange band of the cart overlay, initially twice the orange height and then increased to the current 84px height.
- Added a hairline at the top of the white banner so it separates cleanly from the cream scrolling cart area.
- Added per-product summary rows inside the banner using the format product name x quantity = item total for each nonzero cart product.
- Kept zero-quantity products out of the white summary area even while their row can remain temporarily visible in the scrollable cart content.
- Aligned product names, quantity labels, and per-item totals into fixed-width columns on the left side of the banner for a cleaner receipt-like read.

Work Completed - Grand Total and Checkout Button

- Added TOTAL = total price accrued as a fixed bottom-left element inside the white cart banner.
- Increased the total text size, made the dollar amount green, and added a subtle hairline border around the green amount.
- Tuned alignment so TOTAL is left aligned, the equals sign is centered in its own column, and the green dollar amount right-aligns with the other numeric totals.
- Added thousands separators to the currency formatter with `toLocaleString("en-US")` and forced the total amount to stay on one line.
- Added an orange Checkout button in the right half of the white banner, matching the shopping-cart button height and using double the shopping-cart button width as the visual placeholder for a future checkout screen.

Validation and Checks Performed

- Ran `node --check mob/app/shop.js` after the cart, quantity, confirmation, and overlay render logic changes.
- Ran `node --check mob/styles/shopStyles.js` after the cart-overlay, product-row, quantity-control, bottom-banner, total, and Checkout geometry changes.
- Ran `git diff --check` to catch whitespace or patch-format issues after the current implementation.
- Reviewed the June 18 commit stat and source hotspots to make sure the worklog matches the committed implementation rather than stale intermediate ideas.
- Confirmed the working tree was clean before creating this June 18 PDF artifact.

Files Touched / Added During June 18

- Primary Shop implementation: `mob/app/shop.js`.
- Primary Shop styling: `mob/styles/shopStyles.js`.
- This final worklog generation creates `alla_vostra_worklog_june18.pdf` at the repository root.

Important Follow-Up Context

- Checkout is still intentionally visual-only. Future work can connect it to a dedicated checkout route, hosted payment page, or backend order API once the frontend cart behavior feels right.

- The cart count currently represents confirmed product entries, not total unit count. Change that deliberately if the desired badge becomes total items instead of unique products.
- Quantity 0 behavior is intentionally split: the row can remain visible while editing inside the cart overlay, but it is pruned when leaving the cart overlay.
- The product-entry controls and cart-row controls now share visual language, but they do not share a single extracted component yet. Extract only after the behavior settles.
- The cart overlay uses careful absolute positioning around the fixed bottom banner; future layout changes should preserve scrollable content clearance above the banner.
- Payment URL fields still exist in the product data, but the June 18 flow moved the visible action toward local cart collection before checkout.

Output Artifact

- Created this worklog PDF: [alla_vostra_worklog_june18.pdf](#).
- No external PDF package was installed; this artifact was generated with a small standard-library PDF writer in the same plain-text-readable spirit as the prior daily worklogs.
