

Alla Vostra Mobile App Work Log - July 28, 2026 (Part 2)

Compiled summary for Tuesday, July 28, 2026 (Part 2) - focus: post-Part-1 Play Store promotional-asset polish, Dream Avenue feature-graphic typography, badge and tagline layout controls, final 1920 x 1080 screenshot exports, and refreshed project snapshots for Alla Vostra.

Generated in continuity with the established Alla Vostra worklog cadence: compact opening summary, source-material review, baseline, goals, work-completed sections, validation, files touched, follow-up context, and output-artifact close.

This artifact covers the committed work after the earlier July 27 into July 28 worklog. The previous artifact is currently tracked as `alla_vostra_worklog_july27.pdf`, while Git history shows it was first added as `alla_vostra_worklog_july28.pdf` and then renamed without content changes. This new file uses the requested Part 2 suffix to record the later July 28 Play Store asset pass.

Source Material Reviewed

- Reviewed all pre-existing root-level Alla Vostra worklog PDFs from May, June, and July to preserve the project naming convention, page size, section order, bullet-heavy implementation notes, validation language, and output-artifact ending.
- Checked worklog metadata and extracted headings across the full PDF series. The logs are letter-size PDFs, with recent July logs usually landing around four to six pages and part-numbered days using the root-level `alla_vostra_worklog_monthday_partN.pdf` pattern.
- Read the latest logs in detail, especially July 25 and the July 27 / July 28 cross-date artifact, because they define the Play Store screenshot workspace, Playwright/Sharp generator, Dream Avenue feature-graphic direction, and current project-memory workflow.
- Reviewed July 7 Part 1, Part 2, and Part 3 as the clearest same-day part-number precedent for title format, opening explanation, files-touched language, and output-artifact wording.
- Reviewed Git history after the earlier July 28 worklog: 566aa00, 7de2c4d, and 2c8c3e5 on main, with HEAD at 2c8c3e5: Refined Play Store promotional assets.
- Compared the post-Part-1 diff from 7ca7f2a to HEAD, including name-status and stat output for the worklog rename, generator changes, regenerated PNG outputs, new Play Store export PNGs, and refreshed project snapshots.
- Inspected `docs/play-store/screenshots/mockups/generate-feature-graphic.js`, the mockup README, package scripts, output image paths, and current PNG dimensions before generating this PDF.

Baseline Status Before Part 2

- The earlier July 27 into July 28 worklog had already recorded nested node_modules snapshot cleanup, project-memory refresh, and the first substantial Dream Avenue Play Store feature-graphic polish pass.
- The Play Store screenshot workspace already existed under docs/play-store/screenshots/ with raw, edited, final, and mockups directories, plus a repeatable Playwright and Sharp generator for 1920 x 1080 promotional images.
- The generator already used the orange gradient background, seven Android Large screenshots, phone-frame perspective composition, Dream Avenue wordmark option, TT Fors supporting typography, and standard and Dream output variants.
- The later July 28 work focused on marketing-image source and generated assets. No Expo runtime behavior, native Android configuration, backend route, Stripe/Postmark flow, or Play Console release setting was changed in this Part 2 scope.
- The current repository was clean before creating this worklog artifact, meaning the source and generated image work described here had already been committed before the PDF was generated.

Goals for July 28 Part 2

- Preserve the established worklog series by creating a new Part 2 PDF for the later July 28 work rather than folding it into the earlier cross-date artifact.
- Record the feature-graphic generator changes that made tagline rows, badge spacing, badge distribution, stroke treatment, and screenshot stack offsets more controllable per variant.
- Document the copy and layout refinements that moved the Dream Avenue composition toward the final Smooth / Tasty / Posh direction with tighter badge language and stronger visual hierarchy.
- Capture the final Play Store promotional PNG exports added after the generator polish, including the Dream Avenue background export and playstore1 through playstore4 candidates.
- Keep the worklog grounded in committed files, measured image metadata, and actual Git history rather than relying on session memory alone.

Work Completed - Worklog Naming and History Context

- Confirmed that commit 7ca7f2a originally added alla_vostra_worklog_july28.pdf for the cross-midnight July 27 into July 28 session.
- Confirmed that commit 566aa00 then renamed that artifact to alla_vostra_worklog_july27.pdf with a 100 percent content match. The rename kept the existing PDF content intact while changing the tracked filename.

- Treated the renamed July 27 artifact as the pre-existing July 28-related Part 1 context and created this requested `alla_vostra_worklog_july28_part2.pdf` as the next root-level worklog artifact.
- Matched the newer July worklog style rather than the older early-May prose-heavy style: source review first, then baseline, goals, grouped completed work, validation, files touched, follow-up context, and output artifact.

Work Completed - Feature Graphic Layout and Typography

- Expanded the generator variant controls so standard and Dream outputs can specify badge gap, whether badges spread between the brand and phone deck, screenshot stack X/Y offsets, tagline line scales, explicit tagline line font sizes, line alignment, target width, color, and text stroke.
- Reworked the Dream Avenue tagline from the earlier longer Passionately / Home-Made / Tastefully Sampled / Unforgettable direction into a shorter three-line marketing treatment, first as Convenient / Tasteful / Posh and then as the final Smooth / Tasty / Posh copy.
- Strengthened the Dream tagline treatment with large TT Fors rows, cream-white fill, black stroke, equalized line width behavior, and a tighter final line gap so the right-side copy reads like a graphic element rather than paragraph text.
- Adjusted the Dream wordmark placement by moving the brand name horizontally and vertically, keeping the two-line Alla / Vostra treatment while improving the relationship between the left wordmark, center badges, and right-side tagline.
- Repositioned the phone-frame deck through generator offsets, including a downward Dream variant offset, so the device stack sits more intentionally beneath the top branding and badge area.

Work Completed - Badge Copy, Sizing, and Distribution

- Simplified badge copy in the standard variant from \$10 delivery fee and M. Dade / Broward to \$10 delivery and Dade / Broward.
- Reordered the Dream badge stack to Dade / Broward, \$10 delivery, and 12-hour shipping, with all three Dream badges using the same 1.1 scale for a cleaner hierarchy.
- Added badge-label wrappers and data-label attributes so the generator can measure actual label width instead of treating each badge as an opaque text box.
- Added `badgeWidthSourceLabel` and `badgeWidthSourcePaddingMultiplier` handling so all badges can inherit a consistent measured width from the 12-hour shipping badge while trimming excessive side padding.
- Added DOM measurement logic that spreads the Dream badge stack between the rendered brand

area and the top of the phone deck, then reduces the computed gap to keep the vertical stack compact and readable.

Work Completed - Play Store Promotional Exports

- Regenerated feature-graphic-polished-1920x1080.png after the layout-control pass so the standard output stayed current with the shared generator changes.
- Regenerated feature-graphic-polished-dream-avenue-1920x1080.png after the final Smooth / Tasty / Posh copy, badge width, badge order, brand placement, and phone-deck spacing refinements.
- Added feature-graphic-polished-dream-avenue-background-1920x1080.png as a separate 1920 x 1080 Dream Avenue background-style promotional asset.
- Added playstore1.png under docs/play-store/screenshots/final/ and added playstore2.png, playstore3.png, and playstore4.png under docs/play-store/screenshots/mockups/output/ as 1920 x 1080 Play Store export candidates.
- Kept the generated image work in the Play Store documentation workspace rather than moving it into runtime app assets, preserving the separation between marketing exports and mobile app code.

Work Completed - Project Snapshot Refresh

- Refreshed alla_vostra_APP_PROJECT_SNAPSHOT.txt after the Play Store asset work. The app snapshot timestamp moved to Tuesday, July 28, 2026 at 20:34:05 EDT.
- Refreshed alla_vostra_WEB_PROJECT_SNAPSHOT.txt after the same pass. The web snapshot captured the updated file tree, including the renamed July worklog artifact and newly visible Play Store screenshot workspace entries.
- Left the snapshot files as generated project-memory artifacts. Their changes were metadata and file-tree context rather than app behavior changes.
- Noted that the web snapshot currently includes local .DS_Store paths in the file tree. That is a snapshot-generation hygiene item to consider separately if future project-memory output should be quieter.

Validation and Checks Performed

- Confirmed the working tree was clean before this PDF was created.
- Reviewed git log after the earlier July 28 artifact and confirmed the Part 2 source history on main: the worklog rename in 566aa00, the feature-graphic layout and typography pass in 7de2c4d, and the final promotional-asset export pass in 2c8c3e5.
- Ran git diff --stat and git diff --name-status from 7ca7f2a to HEAD to verify the exact

committed files covered by this Part 2 worklog.

- Used file checks to confirm the generated and exported Play Store PNGs are 1920 x 1080 RGB PNG files: playstore1, playstore2, playstore3, playstore4, both polished feature-graphic outputs, and the Dream Avenue background asset.
- Used pdftotext and pdfinfo on the existing worklog series to match title rhythm, page-size convention, section cadence, and part-number naming before generating this artifact.
- Did not rerun the Playwright/Sharp mockup generator during this worklog-generation step, because the committed image outputs already represented the post-Part-1 asset work and the request was to create the PDF worklog.
- Did not run Expo, Android emulator testing, backend integration tests, payment tests, or a Play Console upload as part of this documentation pass.

Files Touched During July 28 Part 2

- alla_vostra_worklog_july28.pdf to alla_vostra_worklog_july27.pdf - tracked rename of the earlier cross-date worklog artifact, with no content change.
- docs/play-store/screenshots/mockups/generate-feature-graphic.js - added and refined variant-driven controls for tagline sizing, stroke treatment, badge spacing, badge width measurement, badge distribution, and phone-deck offsets.
- docs/play-store/screenshots/mockups/output/feature-graphic-polished-1920x1080.png - regenerated standard polished feature graphic output.
- docs/play-store/screenshots/mockups/output/feature-graphic-polished-dream-avenue-1920x1080.png - regenerated Dream Avenue polished feature graphic output.
- docs/play-store/screenshots/mockups/output/feature-graphic-polished-dream-avenue-background-1920x1080.png - added separate Dream Avenue background/promotional output.
- docs/play-store/screenshots/final/playstore1.png - added final Play Store screenshot/export candidate.
- docs/play-store/screenshots/mockups/output/playstore2.png, playstore3.png, and playstore4.png - added additional 1920 x 1080 Play Store export candidates.
- alla_vostra_APP_PROJECT_SNAPSHOT.txt and alla_vostra_WEB_PROJECT_SNAPSHOT.txt - refreshed generated project snapshot context after the Play Store asset updates.
- alla_vostra_worklog_july28_part2.pdf - created by this worklog-generation pass as the latest root-level PDF artifact.

Follow-Up Context

- If playstore2, playstore3, and playstore4 are meant to be final Play Console uploads, consider copying or regenerating them into docs/play-store/screenshots/final/ so the final folder contains the complete upload set.
- Continue editing Play Store promotional imagery through docs/play-store/screenshots/mockups/generate-feature-graphic.js and then regenerate outputs, so final PNGs remain reproducible from tracked source.
- Before Play Console submission, verify which image belongs in the feature graphic slot versus phone screenshot slots, because all current Part 2 exports are 1920 x 1080 promotional-style PNGs.
- Recheck Play Store production-access claims, ASO copy, and tester-report recommendations separately. This Part 2 worklog records marketing asset polish, not new onboarding, rate-prompt, social-sharing, support, security, payment, or production-release behavior.
- If snapshot readability matters before the next project-memory refresh, consider adding .DS_Store filtering to the snapshot workflow so generated file trees do not record local macOS metadata paths.

Output Artifact

- Generated PDF: alla_vostra_worklog_july28_part2.pdf.
- Location: repository root, alongside the existing Alla Vostra worklog PDFs.
- Format: letter-size PDF, generated with a lightweight standard-library PDF writer using the same plain-text-readable style as the recent project worklogs.
