

Alla Vostra Mobile App Work Log - July 25, 2026

Compiled summary for Saturday, July 25, 2026 - focus: Testers Community feedback and production-access report intake, private tester-report storage, Play Store ASO description expansion, Play Store screenshot asset organization, feature-graphic experimentation, Playwright/Sharp mockup-generator setup, Dream Avenue brand typography, and final screenshot/device-frame composition for Alla Vostra's Google Play listing work.

Generated in continuity with the established Alla Vostra daily worklog cadence: compact opening summary, source-material section, baseline section, goal list, work-completed sections, validation section, files-touched list, follow-up context, and output-artifact close.

This artifact records the July 25 Play Store listing and marketing-asset workflow after the closed-testing release had already been published and tester feedback had been received. It intentionally focuses on Play Store readiness, documentation, asset organization, and generated listing graphics rather than new mobile runtime feature development.

Source Material Reviewed

- Reviewed all existing root-level Alla Vostra worklog PDFs from May, June, and July to preserve the current naming convention, title cadence, section rhythm, bullet-heavy implementation style, validation language, and output-artifact close.
- Measured the existing worklogs with pdftotext/pdfinfo to confirm the normal range of one-to-seven pages, with recent July logs commonly using concise source review, baseline, goals, work completed, validation, files touched, follow-up context, and output sections.
- Read the latest July 18 worklog in full, since it is the most recent Play Console / closed-testing artifact and defines the current release state that July 25 builds on.
- Read the private Testers Community feedback report at [private/tester-reports/com.allavostra.app_feedback.pdf](#) and the production access questionnaire at [private/tester-reports/com.allavostra.app_production.pdf](#).
- Reviewed current Git history for the July 25 commits 92c34ea and 76a39e8, including commit messages, changed files, and patch details for .gitignore, snapshots, Play Store checklist copy, screenshot folders, generated images, and the mockup generator.
- Reviewed the current clean working tree and confirmed HEAD is 76a39e8 on main after the Play Store screenshot/mockup-generator work was committed.
- Reviewed the Play Store screenshot source images, generated orange-gradient mockups, final polished feature graphics, mockup README, package scripts, and generator source under docs/play-store/screenshots/.

Baseline Status Before Today's Work

- Alla Vostra already had an active Google Play closed-testing release for package com.allavostra.app, version 1.0.0 / versionCode 1, available to selected testers through the Alpha closed-testing track.
- The July 18 workflow had completed privacy policy hosting, Play Console app-content declarations, Data safety answers, store listing setup, tester group access, Testers

Community submission, and Stripe test-mode guidance.

- Testers Community feedback reported that the app performed well across tested devices and SDK configurations, with no critical crashes, bugs, or functional discrepancies found during testing.
- The main improvement areas identified by testers were Play Store ASO, onboarding, enhanced Play Store screenshots, rate-the-app prompting, customer support access, promotions/offers, security reassurance, user feedback loops, and social sharing.
- The repo still needed a durable location for tester reports, a cleaner Play Store screenshot workspace, and a repeatable way to generate higher-quality marketing graphics without relying on one-off manual image edits.
- The project's brand baseline remained Dream Avenue for the Alla Vostra wordmark, TT Fors-style supporting typography in the app, the warm orange/cream visual system, and mobile screenshots centered on ordering, cart, payment, and confirmation flows.

Goals for July 25

- Move the tester feedback and production-access reports out of public source tracking while keeping them available locally for release planning.
- Study the tester reports and translate their recommendations into project direction, especially around ASO and Play Store visual presentation.
- Improve the Play Store launch checklist with longer, more relevant, keyword-aware store listing copy.
- Create a repo-local screenshot workspace for raw, edited, final, and generated Play Store screenshot material.
- Copy the current uploaded Play Store screenshots into the raw workspace without deleting the original screenshot sources elsewhere in the repo.
- Produce a 1920 x 1080 orange gradient background and iterate through feature-graphic mockups using the actual app screenshots.
- Replace fragile hand-written pixel mockups with a repeatable Playwright and Sharp generator for polished Play Store feature graphics.
- Generate final polished feature-graphic variants, including a Dream Avenue version matching the official Alla Vostra logo typography.

Work Completed - Tester Reports and Private Storage

- Moved the Testers Community feedback report and production access questionnaire into private/tester-reports/ so they remain available locally but are no longer treated as public project documentation.
- Updated .gitignore to exclude private/ as private launch/tester material, preventing tester-provider documents from being accidentally committed in future source-control passes.
- Refreshed the app and web project snapshots as part of the tester-report handling commit, preserving updated project memory around the current Play Store and testing state.
- Confirmed the private reports were letter-size PDFs, with the feedback report at seven

pages and the production questionnaire at five pages.

- Studied the feedback report's main recommendation set: ASO expansion, onboarding walkthrough, improved screenshots, rate-the-app functionality, stronger support access, promotions/offers, security reassurance, feedback collection, and social-media sharing.
- Studied the production access questionnaire answers and noted that some suggested answer text assumes improvements were already implemented; future production-access responses should be edited to match only what has actually shipped.

Work Completed - ASO and Store Listing Copy

- Clarified that ASO means App Store Optimization: the keyword, copy, screenshot, and presentation work used to improve discovery and conversion in an app store listing.
- Reviewed the then-current Play Store short description and full description in `PLAY_STORE_LAUNCH_CHECKLIST.md`.
- Rewrote the short description from a minimal grazing-board statement into: Order handcrafted grazing boards for South Florida celebrations.
- Expanded the full description into a longer, more relevant Play Store draft focused on handcrafted grazing boards, celebrations, gifts, office events, holidays, family gatherings, South Florida delivery, board selection, cart review, delivery details, delivery time, secure checkout, and support/contact features.
- Added an App features section to the launch checklist so the Play Store copy clearly surfaces board variety, gathering sizes, Miami-Dade and Broward service-area language, checkout steps, secure payment options, and customer-support contact paths.
- Preserved the original checklist file rather than replacing it with a separate ASO-only markdown file, keeping Play Store copy decisions close to the release checklist where future submission work will happen.

Work Completed - Screenshot Workspace and Raw Assets

- Created the `docs/play-store/screenshots/` workspace with raw, edited, final, and mockups areas so Play Store visual assets can be iterated inside the repo without mixing them into app runtime assets.
- Copied the Play Store uploaded Android Large screenshot set into `docs/play-store/screenshots/raw/Android_Large/` while leaving the original screenshots/ source folder untouched.
- Identified the seven active Android Large screenshots by visual screen and aspect ratio: Home/startup, Taste carousel, Shop preview/delivery details, product overlay, filled cart, payment confirmation, and final order confirmation.
- Removed unused copied raw screenshots from the raw Play Store workspace while preserving the original screenshot files outside the `docs/play-store` raw folder.
- Created placeholder `.gitkeep` files for raw, edited, and final screenshot folders so the directory structure remains stable before every subfolder has finalized assets.
- Discussed Play Store grid behavior and image constraints for phone, tablet, desktop, and horizontal images so the screenshot and feature-graphic work matched Google Play presentation expectations.

Work Completed - Gradient and Early Mockup Iteration

- Created an orange 1920 x 1080 gradient background using the Alla Vostra signature orange direction and button-like brightening/darkening behavior.
- Iterated the background through several darker and lighter variants, removing harsh blotchy shapes and settling on a balanced middle version with more dramatic but smooth darkened areas.
- Generated early screenshot-composite variants on top of the approved background, including a scattered collage, a centered seven-screen row, a perspective/trapezoid version, and a 150-percent enlarged perspective version.
- Validated each generated PNG with sips/file checks to confirm 1920 x 1080 output dimensions and readable PNG metadata.
- Recognized that the hand-written PNG pixel-warp approach was too brittle for polished Play Store marketing visuals, leading to the decision to move the mockup workflow into browser-rendered HTML/CSS.

Work Completed - Playwright and Sharp Mockup Generator

- Created docs/play-store/screenshots/mockups/ as a dedicated, self-contained generator folder for Play Store marketing images.
- Initialized a local package and installed Playwright plus Sharp as development dependencies for repeatable screenshot composition and final PNG export.
- Installed the required Playwright Chromium browser binary locally so the generator can render the HTML/CSS composition headlessly.
- Added generate-feature-graphic.js to read the raw Android screenshots, embed the orange background and screenshots, render a 1920 x 1080 HTML composition, and export final PNGs through Sharp.
- Patched the generator to embed images as data URLs after local file loading initially timed out inside Playwright.
- Added npm scripts for npm run generate, npm run generate:feature, and npm run generate:dream.
- Added README instructions explaining installation, generation commands, input locations, output locations, and why Playwright/Sharp were chosen over manual pixel scripts.
- Confirmed node_modules/ remains ignored by the root .gitignore while package.json, package-lock.json, generator source, README, and generated outputs are tracked.

Work Completed - Polished Feature Graphics

- Generated feature-graphic-polished-1920x1080.png as the standard polished feature graphic with phone frames, shadows, perspective, brand copy, badges, and the orange background system.
- Generated feature-graphic-polished-dream-avenue-1920x1080.png using the official Dream Avenue font from mob/assets/fonts/dream_avenue/dream_avenue.ttf for the Alla Vostra wordmark.
- Scaled the brand stack by 25 percent while keeping its top-left padding anchored to preserve a strong first-viewport brand signal.

- Split the top area into a left brand stack, center badge stack, and right Dream Avenue message reading Deliciousness awaits
- Updated the badge copy to 12-hour shipping, \$10 delivery fee, and M. Dade / Broward, then tightened badge horizontal padding and bound all badge widths to the widest badge.
- Adjusted the right-side Dream Avenue message size to a 25-percent increase after a 50-percent test proved too large for the available right-side zone.
- Reordered the seven device-frame screenshots so the left side now presents Products, Delivery, Taste, Home and the right side presents Confirmed, Payment, Cart, while each screenshot inherits the size, rotation, and z-index of its placement slot.
- Increased the non-straight device-frame rotations slightly while leaving the center Home frame straight, and preserved center-weighted z-index depth so larger frames closer to the center remain visually in front.

Validation and Checks Performed

- Confirmed the working tree was clean before generating this July 25 worklog artifact.
- Reviewed git log and confirmed the two July 25 commits in scope: 92c34ea for private tester-report storage and 76a39e8 for Play Store screenshot assets and the mockup generator.
- Reviewed git show output for changed files, commit messages, and patch scope so this worklog reflects committed state rather than memory alone.
- Ran npm run generate in docs/play-store/screenshots/mockups/ and confirmed both polished output PNGs regenerated successfully.
- Verified both final generated feature-graphic outputs with sips as 1920 x 1080 PNG files.
- Visually inspected the Dream Avenue generated output multiple times during iteration to catch text clipping, badge spacing, screenshot order, device-frame depth, and awkward overlap.
- Confirmed the raw screenshot assets retained their Android Large source dimensions and that original screenshot files outside docs/play-store/screenshots/raw were not deleted.
- Confirmed private/tester-reports remains ignored and should stay outside public source tracking unless the user intentionally changes that policy.

Files Touched During July 25

- .gitignore - added private/ ignore coverage for launch/tester materials.
- alla_vostra_APP_PROJECT_SNAPSHOT.txt and alla_vostra_WEB_PROJECT_SNAPSHOT.txt - refreshed project snapshot context during tester-report handling.
- PLAY_STORE_LAUNCH_CHECKLIST.md - updated the Play Store ASO short description and expanded full description draft.
- private/tester-reports/com.allavostra.app_feedback.pdf and private/tester-reports/com.allavostra.app_production.pdf - retained locally as ignored private tester documents.
- docs/play-store/screenshots/raw/, edited/, final/, and mockups/ - created the Play Store screenshot workspace.

- docs/play-store/screenshots/raw/Android_Large/*.png - added selected raw screenshots plus generated orange-gradient and early mockup variants.
- docs/play-store/screenshots/mockups/package.json and package-lock.json - added the local Playwright/Sharp generator package metadata.
- docs/play-store/screenshots/mockups/generate-feature-graphic.js - added and iterated the repeatable feature-graphic generator.
- docs/play-store/screenshots/mockups/README.md - documented generator usage and asset locations.
- docs/play-store/screenshots/mockups/output/feature-graphic-polished-1920x1080.png and feature-graphic-polished-dream-avenue-1920x1080.png - generated final polished feature graphics.
- alla_vostra_worklog_july25.pdf - generated this daily worklog artifact following the established root-level naming convention.

Follow-Up Context

- Use the Dream Avenue polished feature graphic as the leading candidate for Play Store visual presentation, then decide whether a separate final export should be copied into docs/play-store/screenshots/final/ or mob/assets/store/ depending on the exact Play Console slot.
- Continue building final phone screenshots with feature-focused captions or layouts, because the tester report specifically called out that basic screenshots do not fully sell the app's value.
- Keep raw screenshots separate from edited and final screenshots so the uploaded Play Store materials can be regenerated without losing original captures.
- Treat onboarding, rate-the-app, promotions/offers, support access, feedback-loop, social sharing, and security reassurance as future app/product improvements, not as completed production-access claims unless implemented and validated.
- Before answering Google Play production-access questions, rewrite the Testers Community suggested answers so they match the actual completed changes, especially around onboarding and rate prompts.
- If another AAB is uploaded after screenshot/listing improvements, increment versionCode and preserve the source commit that produced the uploaded bundle.
- Keep private tester reports ignored unless a sanitized public summary is intentionally created for docs/.
- Regenerate the feature graphics with npm run generate after any future raw screenshot, layout, copy, or font changes.

Output Artifact

- Generated PDF: alla_vostra_worklog_july25.pdf
- Location: repository root, /Users/prahlin/gh/alla_vostra
- Generation style: local standard-library PDF writer with Helvetica-style typography, root-level filename convention, section order, footer, and page-number cadence matched to recent Alla Vostra worklog artifacts.
