

# Alla Vostra Mobile App Work Log - July 29 and July 30, 2026

Compiled summary for Wednesday, July 29, 2026 into early Thursday, July 30, 2026 - focus: Android Large AVD continuity, the new left-edge sticky question button, question-mark typography and fill polish, a question-specific shop-style overlay, full header and carousel dimming repairs, swipe-left five-step guide pages, Android Large screenshot capture, Play Store screenshot asset cleanup, and refreshed project snapshots for Alla Vostra.

Generated in continuity with the established Alla Vostra worklog cadence: compact opening summary, source-material review, baseline, goals, grouped work-completed sections, validation, files touched, follow-up context, and output-artifact close.

This artifact is named `alla_vostra_worklog_july29.pdf` because it records the July 29 interactive mobile-app session. The final source commit landed just after midnight on Thursday, July 30, 2026 at 00:32 EDT, so the title records the cross-midnight completion while the filename preserves the requested July 29 worklog date.

## Source Material Reviewed

- Reviewed all pre-existing root-level Alla Vostra worklog PDFs from May, June, and July to preserve the project naming convention, letter-size PDF output, title cadence, section order, bullet-heavy implementation notes, validation language, and output-artifact ending.
- Extracted and checked text/metadata across the full worklog series with `pdftotext` and `pdfinfo`. The latest July logs usually land around four to six pages and use Source Material Reviewed, Baseline, Goals, Work Completed, Validation, Files Touched, Follow-Up Context, and Output Artifact sections.
- Read the July 25, July 27, and July 28 Part 2 logs in detail because they define the current Play Store screenshot workspace, Dream Avenue feature-graphic workflow, generated project-memory snapshots, and current daily worklog style.
- Reviewed Git history after the July 28 Part 2 artifact. The July 29 source window begins after `a1a9ab0`, which added `alla_vostra_worklog_july28_part2.pdf`, and culminates in `470863e`: Added swipeable question guide overlay.
- Compared `a1a9ab0..470863e` with `git diff --stat` and `git diff --name-status`, covering 24 changed files, 645 insertions, 11 deletions, new question overlay components, final Play Store PNGs, Android Large screenshots, and refreshed snapshot files.
- Inspected the current mobile source around `RootLayout`, `AppHeader`, `ShopScreen`, `shopCartContext`, sticky cart styling, `StickyQuestionButton`, `QuestionOverlay`, and `stickyQuestionStyles` to describe the implemented behavior from source rather than memory alone.
- Reviewed the screenshot and Play Store asset paths added or moved during the session, including `screenshots/alla_vostra/Android_Large/` and `docs/play-store/screenshots/final/`.

## Baseline Status Before July 29 Work

- The app already had a mature Shop overlay system with cream content panels, orange top and bottom banners, sticky cart behavior, dimmed background logic, and Android status-bar handling.
- The global `AppHeader` was already sensitive to overlay layering, because the orange brand bar, carousel/navigation row, indicators, sticky expansion, and Android-safe-area offsets all interact with screen dimming and route transitions.

- The right-edge sticky cart button already carried the shared sticky-button sizing, edge offset, border/shadow treatment, and badge logic that the new help/question affordance needed to mirror without becoming a cart control.
- The Play Store screenshot workspace already existed under docs/play-store/screenshots/ with raw, edited, final, and mockups areas plus the repeatable Playwright/Sharp feature-graphic generator.
- The Android Large AVD named AllaVostra\_Large\_Android\_API\_35 was the active visual target for this session, and the user wanted screenshot capture from that emulator saved into the existing screenshot folder whenever they said now.
- No backend route, Stripe payment server, Postmark email path, Play Console setting, or native Android package identity change was part of the July 29 scope.

## Goals for July 29

- Add a new sticky question/help button on the opposite edge from the sticky cart button, using the same vertical placement and sticky-button geometry while making the shape circular.
- Keep the button available on screens before the user enters the Shop overlay flow, and prevent it from conflicting with shop overlays, cart-opening transitions, or Android keyboard states.
- Iterate the question-mark typography, stroke, gradient, fill opacity, and vertical centering until it matched the user-directed visual treatment.
- Build a question-specific overlay that reused the shopping overlay frame and darkening behavior, including top and bottom orange banners, while leaving the cream content area available for guide content.
- Fix overlay dimming so the app header, navigation row, carousel area, and background all darken cleanly without gray edge artifacts or visible high-contrast slivers, while keeping the Alla Vostra logo fully visible.
- Replace the initial vertical stack of five guide items with five separate swipe-left-only overlay pages, each showing one numbered bubble and one title line in the same high cream-area placement.
- Save Android Large AVD screenshots into the repo when requested during the visual-review loop, then keep the final implementation represented in committed source and generated assets.

## Work Completed - Android Large AVD and Screenshot Capture

- Established the AllaVostra\_Large\_Android\_API\_35 emulator as the active Android Large visual target after the user reported that Android Studio was booting the wrong app/AVD path.
- Maintained a repeatable screenshot capture path using adb screencap from the active Android Large emulator and saved captures under screenshots/alla\_vostra/Android\_Large/ with timestamped alla-vostra-large-YYYYMMDD-HHMMSS.png filenames.
- Added six Android Large screenshots from the July 29 visual pass: 214920, 215013, 215042, 215105, 215134, and 215225 Eastern-time captures.
- Kept screenshot capture as a documentation and visual-review artifact. It did not change runtime source behavior, but it preserved the exact large-emulator states used during the question-overlay design loop.

## Work Completed - Sticky Question Button

- Added mob/components/StickyQuestionButton.js as a left-edge sticky circular button using the shared stickyButtonEdgeOffset and existing sticky-button size so it visually pairs with the cart button while remaining a separate help affordance.

- Added mob/styles/stickyQuestionStyles.js for the circular frame, transparent shadow plate, thick black border, clipped fill layer, centered foreground icon, and high z-index/elevation required for overlay visibility.
- Loaded TT Fors Black in mob/app/\_layout.js so the question mark and numbered guide digits could use the repo custom font instead of relying on platform fallback typography.
- Iterated the question-mark treatment through size, font, gradient, fill transparency, white-circle fill, stroke thickness, and vertical-centering passes. The final icon uses TT Fors Black, orange gradient fill, and a thin black hairline stroke.
- Kept the sticky question button available while the question overlay is open, so tapping the same button can close the overlay instead of swapping the control to the orange X used by shop overlay screens.
- Hid the question button during visible shop overlays, pending cart-overlay actions, and Android Shop keyboard display states so the new control does not compete with checkout inputs or cart entry actions.
- Matched the sticky cart fill-opacity polish by setting the cart button fill clip to 0.98 and giving the question circle its final 0.98 white fill opacity.

### **Work Completed - Question Overlay State and Layering**

- Expanded shopCartContext with isQuestionOverlayVisible plus openQuestionOverlay and closeQuestionOverlay actions, keeping the state alongside existing shop/cart overlay state so overlay interactions remain coordinated.
- Closed the question overlay automatically when the shop overlay becomes visible or when a cart overlay open is requested, preventing the help overlay from stacking on top of the purchase flow.
- Mounted QuestionOverlay globally from RootLayout and passed headerScrolly into it so the overlay can calculate the current visible header/carousel region before placing its dim layer.
- Disabled the normal ScreenFade while the question overlay is visible and expanded Android status-bar dimming so the top native/status area participates in the same overlay state.
- Updated ShopScreen and AppHeader integration so question-overlay dimming can coexist with truck/shop overlay dimming without losing the expected header layering model.

### **Work Completed - Header Dimming and Logo Preservation**

- Reused the shop overlay dimming idea for the question overlay while adding dynamic top-offset calculations based on safe-area inset, Android header overlap, visible orange-bar height, carousel height, sticky expansion progress, and current header scroll value.
- Added a separate full-width carousel/header dim band from QuestionOverlay for non-Shop routes. This fixed the visible high-contrast sliver and avoided the ugly gray box edges that appeared when the header tried to dim itself internally.
- Kept the Alla Vostra brand logo fully visible during screen overlays by adding a logoPressableSpotlight style with elevated z-index/elevation while the surrounding header content dims.
- Preserved shop-button/header spotlight behavior during overlay states, but moved the most fragile nav/carousel dim coverage out of AppHeader so the dim layer follows the visible header geometry cleanly.
- Maintained the existing shop overlay orange/cream visual language: the question overlay uses the same truckOverlayFrame/window family, orange top gradient band, orange bottom fill, black stroke, rounded frame, and dimmed background logic.

## Work Completed - Five-Step Swipe Guide

- Defined five guide steps for the question overlay: Browse Grazingboards, Pick Your Quantity, Add To Cart, Complete Your Checkout, and Your Delivery Is Coming!
- Created a half-scale numbered bubble treatment by copying the question-circle stack behavior into a smaller circular number bubble with the same white fill, black border, shadow-plate structure, orange gradient text fill, TT Fors Black weight, and hairline digit stroke.
- Started with a vertical five-bubble guide list, spread it evenly through the cream area, doubled the side padding, and aligned the TT Fors guide titles between each bubble and the right-side cream padding.
- Replaced the vertical list with five separate overlay pages after the user asked for one bubble/title stack per overlay. Each page now shows only its current number and specific title line.
- Added swipe-left-only responder handling to the cream overlay window. A left swipe past the configured distance advances from step 1 through step 5, while non-left gestures do not change the current step.
- Kept every page aligned to the same high vertical placement and same horizontal row geometry, so bubble 2 through bubble 5 appear exactly where bubble 1 appeared instead of drifting down the panel.
- Reset the guide to step 1 whenever the question overlay opens, keeping the flow predictable after the overlay is closed and reopened.

## Work Completed - Play Store Assets and Snapshot Refresh

- Moved playstore2.png and playstore4.png out of docs/play-store/screenshots/mockups/output/ and into docs/play-store/screenshots/final/ so the final screenshot workspace carries the current export candidates.
- Added docs/play-store/screenshots/final/playstore5.png as another final Play Store screenshot/export candidate.
- Adjusted the Dream Avenue feature-graphic generator by moving the Dream tagline top value from 88.5692 px to 58.5692 px, then regenerated feature-graphic-polished-dream-avenue-1920x1080.png.
- Refreshed alla\_vostra\_APP\_PROJECT\_SNAPSHOT.txt and alla\_vostra\_WEB\_PROJECT\_SNAPSHOT.txt after the question-overlay, screenshot, and Play Store asset changes. The snapshots now capture the July 29 generated file tree and new mobile source files.
- Kept all Play Store and screenshot changes in documentation/marketing asset paths rather than treating them as runtime mobile app assets.

## Validation and Checks Performed

- Confirmed the repository was clean at HEAD 470863e before generating this July 29 worklog artifact.
- Reviewed git log, git show --stat, git show --name-status, git diff --stat, git diff --name-status, and git diff --shortstat for a1a9ab0..470863e to confirm the exact source, asset, screenshot, and snapshot scope covered by this worklog.
- Ran npm exec expo export -- --platform android --output-dir /tmp/alla\_vostra\_question\_overlay\_swipe\_steps\_export --clear --no-bytecode during the implementation pass; the Android export completed successfully.
- Reloaded the Android Large AVD, opened the question overlay, and confirmed visually that step 1 showed only bubble 1 with Browse Grazingboards high in the cream area.
- Sent an adb left-swipe input on the Android Large emulator and confirmed the overlay advanced to step 2 with bubble 2 and Pick Your Quantity in the same placement as step 1.
- Captured Android Large screenshots during the July 29 review loop and committed the six

- timestamped PNGs in the existing screenshots/alla\_vostra/Android\_Large/ folder.
- Used pdftotext and pdfinfo across the existing worklog series before generating this artifact, then planned the new output to match the recent root-level letter-size PDF convention.
  - Did not run a Play Console upload, production EAS build, backend integration test, Stripe live-payment test, Postmark delivery test, or iOS validation as part of this UI/documentation-focused pass.

## Files Touched During July 29

- mob/components/StickyQuestionButton.js - added the left-edge circular question/help sticky button, TT Fors Black SVG question mark, visibility rules, and open/close overlay behavior.
- mob/styles/stickyQuestionStyles.js - added the circular question-button frame, white fill layer, black border, shadow plate, and foreground icon placement styles.
- mob/components/QuestionOverlay.js - added the question-specific overlay, shop-style frame/banners, header-aware dimming, numbered guide bubbles, TT Fors guide labels, and swipe-left step navigation.
- mob/utils/shopCartContext.js - added question overlay state/actions and coordination rules with shop/cart overlay opening.
- mob/app/\_layout.js - mounted QuestionOverlay and StickyQuestionButton globally, loaded TT Fors Black, passed header scroll state into the overlay, and adjusted screen/status dim behavior.
- mob/app/shop.js - included question-overlay visibility in shop/header dimming behavior so the Shop route stays visually consistent when the question overlay is active.
- mob/components/AppHeader.js and mob/styles/headerStyles.js - added the logo spotlight layer needed to keep the Alla Vostra logo visible while surrounding header content dims.
- mob/styles/stickyCartStyles.js - tuned the sticky cart fill opacity to match the final button-fill treatment.
- docs/play-store/screenshots/mockups/generate-feature-graphic.js and feature-graphic-polished-dream-avenue-1920x1080.png - moved the Dream tagline upward and regenerated the Dream Avenue promotional output.
- docs/play-store/screenshots/final/playstore2.png, playstore4.png, and playstore5.png - added final Play Store screenshot/export candidates.
- docs/play-store/screenshots/mockups/output/playstore2.png and playstore4.png - removed the duplicate mockup-output copies after moving the assets into final/.
- screenshots/alla\_vostra/Android\_Large/\*.png - added six Android Large AVD screenshots captured during the July 29 visual pass.
- alla\_vostra\_APP\_PROJECT\_SNAPSHOT.txt and alla\_vostra\_WEB\_PROJECT\_SNAPSHOT.txt - refreshed generated project-memory context after the UI, screenshot, and asset updates.
- alla\_vostra\_worklog\_july29.pdf - generated this daily worklog artifact at the repository root.

## Follow-Up Context

- The question overlay currently advances forward with left swipes and clamps at step 5. If later desired, right-swipe/back behavior, page indicators, or close-on-background-tap behavior can be considered as separate interaction changes.
- The header dimming fix depends on the overlay calculating visible header and carousel heights from headerScrollY. Future header geometry changes should recheck the question overlay on Home, Products, About Us, Contact, and Shop.
- The numbered guide currently uses the high fixed placement requested for each overlay page. Any later guide-content expansion should preserve that intentional top alignment

unless the user asks for a different reading rhythm.

- The Android Large screenshot-capture convention is now established in practice. Future now requests should continue saving timestamped screenshots in `screenshots/alla_vostra/Android_Large/`.
- The Play Store final screenshot folder now contains `playstore1`, `playstore2`, `playstore4`, and `playstore5`. There is still a `mockups/output` `playstore3`, so a future asset pass may decide whether it also belongs in `final/` or should remain a generator output.
- No backend/payment behavior was changed in this pass, so checkout production-readiness remains governed by the earlier Play Store, Stripe, and Postmark worklogs rather than by this overlay UI session.

## **Output Artifact**

- Generated PDF: `alla_vostra_worklog_july29.pdf`.
- Location: repository root, alongside the existing Alla Vostra worklog PDFs.
- Format: letter-size PDF generated with the same lightweight standard-library style used by recent project worklogs.
