

Alla Vostra Mobile App Work Log - June 26, 2026

Compiled summary for Friday, June 26, 2026 - focus: Delivery overlay Continue-button gating, cart Checkout eligibility, brighter low-visibility orange buttons, filled-cart receipt and total alignment, visible cart scrolling, product-row asset sizing, product description text, and the final 2x2 filled-cart product grid with refined divider geometry.

Generated automatically on June 26, 2026 after reviewing recent root-level worklog PDFs, the June 26 Git commit chain, current mobile source files, refreshed project snapshots from June 25, local parser and whitespace checks, and the clean working tree state before this artifact was created.

Includes tracked Git work from commits 524fcc9, f361153, 6411b64, fc7bca4, adbe17c, and 0180ae5. Together these commits moved the order path from broad overlay/navigation polish into a more readable, more deliberate filled-cart experience with stronger gating around Checkout, Continue, and product quantities.

Source Materials Processed

- Read recent root-level PDF worklogs, especially June 23, June 24, and June 25, with pdftotext to preserve the established title cadence, compact summary opening, source-material section, baseline section, bullet-heavy work sections, validation section, follow-up context, and output-artifact close.
- Reviewed the June 26 Git history from commit 524fcc9 through 0180ae5, including commit messages, timestamps, changed files, and patch stats for Delivery overlay gating, Checkout dimming, dimmed orange-button styling, filled-cart product layout, visible scrollbar work, and the final product-row grid pass.
- Checked the current project context against alla_vostra_APP_PROJECT_SNAPSHOT.txt and alla_vostra_WEB_PROJECT_SNAPSHOT.txt, both generated Thursday, June 25, 2026 at 10:07 EDT, confirming the active mobile project remains /Users/prahlin/alla_vostra/mob.
- Inspected source hotspots in mob/app/shop.js, mob/styles/shopStyles.js, and mob/styles/sharedStyles.js, which are the files touched by the June 26 committed work.
- Confirmed the June 26 implementation chain touched the mobile Shop implementation, Shop styles, shared divider styling, cart action state, delivery button state, and filled-cart product-row geometry.
- Used git log, git show --stat, git diff --stat, git status, rg, sed, pdftotext, pdftinfo, node --check, git diff --check, repeated Expo platform exports from the implementation cycle, and a small standard-library PDF writer; no external PDF package was installed.

Current Baseline to Preserve

- Primary app work remains in /Users/prahlin/alla_vostra/mob, using Expo Router and React Native as the mobile runtime surface.
- The Shop path still uses the Products, Cart, Delivery, Payment, and Confirmed overlay sequence established on June 25. June 26 focused mainly on gating and filled-cart legibility rather than changing that order.
- Checkout remains visual/front-end only. The user can move through delivery, payment, prompt, and confirmed screens, but there is still no backend order endpoint, production payment integration, delivery dispatch, or persisted order record.
- Low-visibility action buttons are now part of the user-safety language. Checkout, Continue, Place order, and dimmed triangle buttons should communicate unavailable state clearly without using translucent overlap that lets other assets bleed underneath.
- The filled-cart product rows now use a careful 2x2 presentation: name and price in the top-left area, serving text in the top-right area, image in the bottom-left area, and counter plus remove button in the bottom-right area.
- The cart cream area has become more mathematically tuned. Scrollbar reservation,

horizontal divider insets, marginless asset centering, mini-divider lengths, and row-cell spacing are interdependent and should be adjusted together.

Main Goals We Worked Toward

- Make Delivery and Payment progression feel intentional by requiring complete form information before Continue and Place order reach full visibility.
- Prevent users from starting checkout with an empty cart or with a visible cart item sitting at quantity zero.
- Make low-visibility orange buttons look disabled by becoming brighter and more faded rather than darker, matching the Add button language users already see in the product overlay.
- Turn the filled-cart overlay into a readable order review surface where product names, prices, serving details, images, counters, remove controls, delivery, taxes, and totals can be scanned quickly.
- Make multi-product carts visibly scrollable by giving the cream product area a dedicated scrollbar and preserving layout logic that treats the scrollbar as the right edge of the usable area.
- Replace the crowded product-row layout with a more sophisticated grid-like composition that lets each product entry read as four deliberate information zones.

Work Completed - Delivery Continue Button and Form Gating

- Reduced the truck image size on the Delivery overlay to 50 percent after it was too dominant in the lower-right contact-information area.
- Copied the Place order button pattern into the Delivery overlay as a Continue button and aligned it to the same bottom-right position used by Place order on the Payment overlay.
- Repositioned the truck image between the zip-field row and Continue button while keeping it horizontally centered between the email-field right edge and zip-field right edge.
- Made the Continue button low visibility until every Delivery form field contains at least one character, using the same visual logic as other unavailable orange actions.
- Kept the Payment Place order button under the same filled-field gating idea so both Delivery and Payment communicate readiness through button visibility rather than only through navigation state.

Work Completed - Checkout Eligibility and Dimmed Button Language

- Gave the empty-cart Checkout button a low-visibility look at all times, reinforcing that checkout cannot start when the cart has no billable products.
- Changed filled-cart Checkout behavior so it becomes low visibility if any product quantity reaches 0, even before the red remove button has been tapped.
- Restored Checkout to full visibility when all listed cart quantities return to 1 or higher.
- Adjusted all dimmed orange-button treatments so they become brighter and more faded when unavailable, instead of sinking into a darker burnt-orange or brown look.
- Used the Product overlay Add button as the visual reference for brighter low-visibility styling, making unavailable buttons feel intentionally muted rather than dirty or shadowed.
- Preserved trigger disabling for dimmed forward/navigation actions, keeping visual state and practical action state aligned.

Work Completed - Filled-Cart Receipt and Totals Cleanup

- Removed the equals-sign syntax from the white receipt area in the filled-cart overlay.
- Moved quantity text directly after the product/item name, reducing the long visual gap so entries read more like product x quantity rather than separated columns.
- Renamed Delivery fee to Delivery and adjusted the delivery and taxes price column toward the right edge of the text area while preserving product-price readability.
- Repositioned TOTAL and the green dollar box into a bottom-right cell concept, then iterated until TOTAL and the green amount aligned with the product-price column.
- Horizontally centered TOTAL against the black rectangle around the green dollar amount, then made the TOTAL letter spacing responsive to the rectangle width.
- Reduced the green dollar amount and TOTAL font sizes in small steps and aligned the Delivery text top edge with the TOTAL top edge.
- Moved Checkout in the cart overlay to match the same visual button placement used by Continue and Place order, even though Checkout sits inside the cart receipt/white area.

Work Completed - Product Row Assets and Controls

- Reduced counter and remove button sizes, then re-aligned them to the visible bottom edge of product imagery rather than the transparent file bounds.
- Adjusted remove button minus-sign size and horizontal scale until the symbol felt visually strong inside the smaller red button.
- Copied product name and price into the filled-cart product row, then separated price to its own line under the product name and reduced only the price size.
- Centered product names and price tags according to the image asset rather than the entire row or the remove-button column.
- Added semantic serving text derived from product overlay descriptions, changing entries such as Serving 8 into cart-facing language and later landing on Serves 8 guests.
- Removed the word people from the serving description when requested, then later replaced the placeholder text area with Serves X guests based on the product metadata.
- Dimmed or brightened product images based on whether their cart counter is at 0, helping quantity state read beyond the number alone.
- Adjusted product image sizes, counter sizes, counter/remove spacing, description placement, and row text sizes through multiple passes until the row felt less cramped and more interpretable.

Work Completed - Scrollbar, Dividers, and Cream-Area Boundaries

- Added a visible scrollbar to the right side of the cream product area when multiple products are listed, making vertical dragging discoverable.
- Doubled scrollbar thickness, changed inactive regions away from gray, moved through orange/black/white treatments, and landed on a white scrollbar with black border and orange active area.
- Removed fuzzy or shadow-like bleeding near the scrollbar and changed the scrollbar bottom from rounded to squared off.
- Treated the scrollbar as the cream area right edge for layout purposes, moving product text, images, buttons, and dividers left enough that assets do not visually collide with the scroll track.
- Adjusted divider margins so text protrudes beyond divider ends, then repaired uneven right-side spacing where dividers sat closer to the scrollbar than to the left side.
- Added horizontal and vertical dividers between product zones, tuned the top divider placement, and nudged the very top cream-area horizontal line down 2px.
- Converted the central cross into four mini divider segments: top vertical, bottom vertical, left horizontal, and right horizontal, each centered in its own outlined gap.
- Matched right, bottom, and left mini-divider lengths to the top mini-divider length, then

changed the horizontal mini dividers to ignore left/right side margins just like the centered assets.

Work Completed - Filled-Cart 2x2 Product Grid

- Reshaped the filled-cart product row into a subtle 2x2 grid: product name and price in the top-left cell, serving text in the top-right cell, product image in the bottom-left cell, and counter plus remove button in the bottom-right cell.
- Made the grid midpoint move between several ratios before returning to the 60 percent distance to bottom / 40 percent distance to top alignment requested later in the day.
- Distributed product name and price tag with equal vertical spacing inside the top-left cell, so the pair respects the cell top wall, the gap between text lines, and the cell bottom wall.
- Distributed the counter and remove button with equal horizontal spacing inside the bottom-right cell, giving the left wall, middle gap, and right wall the same visual logic.
- Separated divider geometry from asset alignment: divider segments preserve their current grid, while text, images, and buttons use a marginless asset-alignment grid for horizontal centering.
- Kept the visible scrollbar reservation in the width math so multi-product carts still treat the scrollbar as a real right-side boundary.
- Preserved repeated iOS and Android Expo export checks during the fine visual tuning, despite very low available disk space requiring cleanup between exports.

Validation and Checks Performed

- Freshly ran node --check mob/app/shop.js before generating this artifact.
- Freshly ran node --check mob/styles/shopStyles.js before generating this artifact.
- Freshly ran node --check mob/styles/sharedStyles.js before generating this artifact.
- Freshly ran git diff --check -- mob/app/shop.js mob/styles/shopStyles.js mob/styles/sharedStyles.js before generating this artifact; no whitespace or patch-format issues were reported.
- Confirmed the working tree was clean before creating this June 26 PDF artifact.
- During the June 26 implementation cycle, repeatedly ran Expo exports for both platforms after delivery gating, checkout dimming, filled-cart scrollbar, product-row layout, 2x2 grid, divider, and asset-centering changes.
- Managed very low available disk space during repeated exports by clearing /tmp/alla-vostra-* export folders and Metro cache/file-map folders after each successful bundle check.

Files Touched / Added During June 26

- Primary Shop implementation, overlay flow state, checkout gating, cart quantity handling, product-row geometry, scrollbar handling, and filled-cart grid math: mob/app/shop.js.
- Primary Shop styling, dimmed orange button colors, scrollbar styling, cart product text, grid-cell spacing, controls spacing, and mini-divider segment styles: mob/styles/shopStyles.js.
- Shared divider styling used by the broader app visual system: mob/styles/sharedStyles.js.
- This final worklog generation creates alla_vostra_worklog_june26.pdf at the repository root.

Important Follow-Up Context

- The Delivery, Payment, and Confirmed overlays remain front-end UI only. Real validation,

address persistence, phone/email validation, order storage, payment integration, and delivery enforcement still need production implementation.

- Checkout gating now communicates unavailable state, but it is not a substitute for backend validation. Empty-cart and zero-quantity rules should be enforced wherever real order submission is eventually added.
- The filled-cart row is now layout-sensitive. Changes to product image size, counter scale, remove-button size, row divider positions, scrollbar width, or overlay margins can shift the perceived 2x2 balance.
- The horizontal mini dividers now use marginless alignment while other divider elements preserve the existing divider grid. Future divider requests should specify whether they apply to visual lines, assets, or both.
- The cart scrollbar is not just decoration; it reserves layout space when multiple products are listed. Removing or resizing it should be paired with a review of product-row widths and divider right insets.
- Low-visibility orange buttons intentionally use brighter muted colors. Avoid replacing that with opacity-based dimming unless overlap and bleed-through behavior are checked again.
- The product-serving text depends on product overlay descriptions that begin with Serving N. If that copy format changes, the cart Serves N guests text may need its parser updated.

Output Artifact

- Created this worklog PDF: [alla_vostra_worklog_june26.pdf](#).
- No external PDF package was installed; this artifact was generated with a small standard-library PDF writer in the same plain-text-readable spirit as the prior daily worklogs.
