

Alla Vostra Mobile App Work Log - August 10, 2026 (Part 2)

Compiled summary for Monday, August 10, 2026 (Part 2) - focus: post-Part-1 Play Store screenshot asset repair, imported portfolio device-frame source reuse, Play Store 4 device depth and background correction, TT Fors headline treatment restoration, Play Store 2 and Play Store 5 headline restyling, final/trim image regeneration, snapshot refresh, commit sync, and current documentation artifact generation for Alla Vostra.

Generated in continuity with the established Alla Vostra worklog cadence: compact opening summary, source-material review, baseline, goals, grouped work-completed sections, validation, files touched, follow-up context, and output-artifact close.

This artifact is named `alla_vostra_worklog_august10_part2.pdf` because the repository U.S. Eastern-time date used for generation was Monday, August 10, 2026, and the August 10 Part 1 worklog already existed as `alla_vostra_worklog_august10_part1.pdf`. It records the work window after the Part 1 worklog commit `8eceb08`, through the current synced source state at `e11dca4`.

Source Material Reviewed

- Reviewed all 52 pre-existing root-level Alla Vostra worklog PDFs from May, June, July, August 1, and August 10 Part 1 to preserve the project naming convention, section order, letter-size PDF output, bullet-heavy implementation notes, validation language, files-touched detail, and output-artifact close style.
- Used `alla_vostra_worklog_august10_part1.pdf` as the primary style and continuity anchor because it is the newest existing worklog and already documents the immediate Play Store marketing asset context that this Part 2 work follows.
- Rechecked `alla_vostra_worklog_august10_part1.pdf`, July 30, and July 31 extracted text to preserve the newer long-form daily-log rhythm around source review, baseline, goals, grouped implementation sections, validation, file inventory, follow-up notes, and artifact close.
- Ran `git pull --ff-only` before creating this artifact; the repository was already up to date on main, with HEAD matching origin/main at `e11dca4` Polished Play Store screenshot assets.
- Reviewed `git show --stat --name-status --format=fuller e11dca4` to document the exact committed file list, commit date, author date, and commit-body summary for the Part 2 source window.
- Compared `8eceb08..HEAD` with `git diff --name-status` and `git log --reverse` so this worklog covers only the changes after the August 10 Part 1 PDF artifact.
- Verified current image dimensions with `sips` for Play Store 2, Play Store 4, Play Store 5, their trim-lr10 variants, and the imported raw device-frame asset.
- Confirmed the current project snapshots, final Play Store image assets, and raw device-frame directory were all represented in the synced Part 2 commit before generating this PDF.

Baseline Status Before August 10 Part 2

- August 10 Part 1 had already rebuilt the feature-graphic generator/output set, refreshed Play Store 2 from 10-Hour Delivery to Next-Day Delivery, and replaced the third Play Store 4 device screenshot with `products_screen_large.png`.
- After Part 1, Play Store 4 still needed visual repair because the third replacement

screenshot did not carry the surrounding device frame correctly and later frame attempts did not match the real portfolio hardware asset.

- The user identified the correct reference as the horizontal center hero device frame on the Alla Vostra project page in the separate portfolio repository, specifically a real imported device-frame PNG rather than a CSS border or solid-color approximation.
- Earlier replacement attempts created problems in three separate areas: side device frames could sit behind their screenshots, the Play Store 4 background could become a stitched or mismatched orange field, and the headline could become too dim after mask-based text extraction.
- Play Store 2 and Play Store 5 still used their earlier headline treatment after Play Store 4 was repaired, so their typography no longer matched the stronger TT Fors Black cream-fill, black-stroke, and drop-shadow treatment approved for Play Store 4.
- The final Play Store screenshot convention remained unchanged: regular assets are 1920x1080, trim-lr10 assets are 1536x1080 centered crops derived from the regular assets, and trims should not drift as independent hand-edited sources.
- No app runtime logic, checkout flow, Stripe integration, Postmark delivery path, package metadata, EAS build setting, Play track setting, or backend release posture was part of this Part 2 scope.

Goals for August 10 Part 2

- Import the exact real Alla Vostra portfolio hero center device frame into this project so future Play Store screenshot repairs can reuse the same source asset directly.
- Rebuild Play Store 4 full and trim images so all three visible phones use the imported real device shell and the side phone hardware sits in front of the screenshot pixels.
- Correct Play Store 4 side-screen placement so the real dynamic-island hardware does not obscure the Home and Products page titles while still preserving the imported frame depth order.
- Rerender Play Store 4 with `alla_vostra_feature_orange_gradient_1024x500.png` as the one and only orange background gradient source, scaled/cropped as needed instead of mixing separate upper and lower background bands.
- Restore Play Store 4 headline visibility by rendering real TT Fors Black text with cream fill, black stroke, and drop shadow rather than relying on a semi-transparent pixel mask from an older headline.
- Apply the same approved headline look to Play Store 2 and Play Store 5 while preserving their pre-existing text sizes, hierarchy, alignment, and placement as closely as possible.
- Regenerate all affected full and trim assets, refresh app/web project snapshots, commit and sync the completed asset work, then generate the next root-level PDF worklog following established conventions.

Work Completed - Portfolio Device Frame Import and Play Store 4 Frame Repair

- Inspected the separate portfolio repository for the Alla Vostra project page and identified the real hero center device-frame asset used by the project hero: `public/images/alla-vostra-hero-startup-framed.png`.
- Imported that real frame into this project at `docs/play-store/screenshots/raw/device-frames/alla-vostra-hero-startup-framed.png`, preserving the original 1290x2661 PNG dimensions.

- Rebuilt docs/play-store/screenshots/final/playstore4.png with the imported real frame source rather than CSS borders, flat solid-color approximations, or manually drawn frame shapes.
- Rebuilt docs/play-store/screenshots/final/playstore4_trim-lr10.png from the completed 1920x1080 regular source so the 1536x1080 crop relationship stayed tied to the full Play Store 4 image.
- Reworked the side-phone compositor so each side screenshot is clipped into the screen aperture first, then the device shell is composited above it; this corrected the depth problem where device frames 1 and 3 had appeared behind their screenshots.
- Preserved the center phone as the imported real frame asset and kept it above the side phones in the established Play Store 4 overlap composition.
- Lowered only the side screenshot content under the device shell so the Home and Products navigation titles remain readable below the dynamic island while the island, rails, bevels, and frame chrome stay physically in front.
- Cleaned the side top-bar crop so the status icons remain, the orange status area remains natural, and the previous thin source separator artifact is not carried forward as an obvious line.
- Visually inspected full and trim candidates during the frame-repair passes before replacing the final PNGs.

Work Completed - Play Store 4 Background and Headline Treatment

- Rerendered Play Store 4 using docs/play-store/screenshots/final/alla_vostra_feature_orange_gradient_1024x500.png as the sole orange background source.
- Scaled and cropped that 1024x500 feature gradient to cover the 1920x1080 Play Store 4 canvas, eliminating the earlier visible horizontal seam between a headline band and lower background field.
- Preserved the approved device-frame/screenshot stack while swapping only the background source and title-rendering layer.
- Replaced the dim mask-extracted Play Store 4 headline with real rendered text: Deliciousness, on the first row and Guaranteed. on the second row.
- Matched the approved title look to the surrounding Play Store set by using TT Fors Black, cream fill (#fff8ed), black/dark stroke (#21170e), paint-order stroke/fill behavior, and a warm/dark drop shadow.
- Tuned the Play Store 4 headline scale and top offset so the two-row title kept the established centered relationship and remained visually strong above the phones.
- Recreated both Play Store 4 regular and trim outputs after the title pass so the final image and crop stayed synchronized.

Work Completed - Play Store 2 and Play Store 5 Headline Restyling

- Updated docs/play-store/screenshots/final/playstore2.png so both existing Play Store 2 text blocks use the same approved TT Fors Black cream-fill, black-stroke, and drop-shadow treatment as Play Store 4.
- Redrew the upper Play Store 2 headline block, keeping the pre-existing 2 Min / To Order. content, approximate size, left-of-center placement, and relationship to the adjacent phone composition.
- Redrew the lower Play Store 2 Next-Day / Delivery. block with the same style while

preserving its right-side placement below the upper phone and beside the lower Home screenshot.

- Used an erase-and-redraw pass rather than an overlay-only pass after early visual inspection showed ghosting from the old text underneath the new title layer.
- Fitted local orange background patches behind the old Play Store 2 text rectangles, then composited the new text layer on top so the final image avoided old-letter bleed-through.
- Updated docs/play-store/screenshots/final/playstore2_trim-lr10.png from the corrected regular source to keep the trim mechanically tied to the full image.
- Updated docs/play-store/screenshots/final/playstore5.png so the Always / Home-Made headline uses the same Play Store 4 text treatment while retaining the original Play Store 5 hierarchy: larger Always line above smaller but wider Home-Made line.
- Cleaned the old Play Store 5 title region with a local background fit before compositing the replacement text, avoiding ghost text while preserving the board image and orange backdrop.
- Updated docs/play-store/screenshots/final/playstore5_trim-lr10.png from the corrected regular source and visually checked the cropped result.

Work Completed - Project Snapshots, Commit, and Sync

- Refreshed alla_vostra_APP_PROJECT_SNAPSHOT.txt after the Play Store asset work so the app-side project snapshot reflected the current file tree, imported frame source, and final image changes.
- Refreshed alla_vostra_WEB_PROJECT_SNAPSHOT.txt in the same pass, preserving the project convention that app and web snapshots move together when the root project state is refreshed.
- Committed the completed Part 2 source and asset changes as e11dca4 Polished Play Store screenshot assets.
- The commit body recorded the three main changes: imported portfolio hero device frame and rebuilt Play Store 4 full/trim assets, restyled Play Store 2 and Play Store 5 full/trim headline text, and refreshed app/web snapshots.
- Synced the completed commit to origin/main before this worklog was generated, leaving the source tree clean and up to date before the new PDF documentation artifact itself was created.

Validation and Checks Performed

- Confirmed git pull --ff-only reported Already up to date before this worklog-generation pass.
- Confirmed git status --short --branch showed main aligned with origin/main before generating the August 10 Part 2 PDF.
- Reviewed git log -5 --oneline --decorate to confirm the recent sequence: e11dca4 Polished Play Store screenshot assets after 8eceb08 generated the August 10 Part 1 worklog and e0526ea updated Play Store marketing assets.
- Reviewed git show --stat --name-status --format=fuller e11dca4 to verify the exact files and commit metadata covered by this Part 2 log.
- Verified final full-image dimensions with sips: playstore2.png, playstore4.png, and playstore5.png are all 1920x1080.
- Verified final trim-image dimensions with sips: playstore2_trim-lr10.png,

playstore4_trim-lr10.png, and playstore5_trim-lr10.png are all 1536x1080.

- Verified the imported raw device-frame dimensions with sips:
alla-vostra-hero-startup-framed.png is 1290x2661.
- Visually inspected Play Store 4 full and trim candidates after the frame-depth pass, the feature-gradient background pass, and the restored headline pass.
- Visually inspected Play Store 2 and Play Store 5 full and trim candidates after the erase-and-redraw text-style pass, checking for old-letter ghosting, patch edges, text contrast, and crop behavior.
- Did not run Expo, EAS, emulator, Stripe, Postmark, Firebase, payment-server, or Play Console upload tests because this Part 2 work changed only static Play Store screenshot assets, raw screenshot-frame source, snapshots, and documentation artifacts.

Files Touched During August 10 Part 2

- alla_vostra_APP_PROJECT_SNAPSHOT.txt - refreshed app project snapshot after the Play Store asset updates.
- alla_vostra_WEB_PROJECT_SNAPSHOT.txt - refreshed web project snapshot in the same project-state pass.
- docs/play-store/screenshots/final/playstore2.png - restyled the upper and lower headline text blocks with the approved TT Fors cream/stroke/shadow treatment.
- docs/play-store/screenshots/final/playstore2_trim-lr10.png - regenerated the matching centered trim crop from the corrected Play Store 2 regular source.
- docs/play-store/screenshots/final/playstore4.png - rebuilt the three-phone composition with the imported real device frame, corrected side-frame depth order, single feature-gradient background source, and restored headline treatment.
- docs/play-store/screenshots/final/playstore4_trim-lr10.png - regenerated the matching centered trim crop from the corrected Play Store 4 regular source.
- docs/play-store/screenshots/final/playstore5.png - restyled the Always / Home-Made. headline with the approved TT Fors cream/stroke/shadow treatment while retaining the original hierarchy and board composition.
- docs/play-store/screenshots/final/playstore5_trim-lr10.png - regenerated the matching centered trim crop from the corrected Play Store 5 regular source.
- docs/play-store/screenshots/raw/device-frames/alla-vostra-hero-startup-framed.png - added the real imported portfolio hero center device frame as a reusable raw device-frame source.
- alla_vostra_worklog_august10_part2.pdf - generated after the synced source commit as the August 10 Part 2 root-level PDF worklog artifact.

Follow-Up Context

- The current Play Store screenshot asset source of truth is the synced e11dca4 state plus this August 10 Part 2 documentation artifact.
- Future Play Store 4 changes should continue using
docs/play-store/screenshots/raw/device-frames/alla-vostra-hero-startup-framed.png for the real hardware shell rather than returning to CSS borders, flat frame approximations, or independent screenshot-only replacements.
- The trim-lr10 assets should continue to be regenerated from their 1920x1080 regular sources to avoid crop drift and mismatched text/background edits.
- If the user resumes the later text-alignment request, the next open visual task is to

horizontally center the two-row text relationships in Play Store 2 and Play Store 5 the way Play Store 4 was centered; that request was raised after e11dca4 and was not part of the synced Part 2 commit.

- No mobile runtime behavior or backend release readiness changed in this session, so the earlier production-readiness caveats around live payments, email delivery, environment variables, and end-to-end smoke testing still apply before public launch.
- Before another Play Console upload, visually re-check Play Store 2, Play Store 4, and Play Store 5 in the console preview because Google Play can crop or scale screenshots differently from local image viewers.

Output Artifact

- Generated the August 10 Part 2 worklog after syncing, after extracting the complete pre-existing root-level worklog set with pdftotext, and after reviewing recent worklog metadata with pdfinfo.
- Rendered as a letter-size PDF using the same standard-library PDF-generator convention as the newest project worklogs, including title, subject, author, creator, producer, page footers, and root-level placement.
- Location: repository root, alongside the existing Alla Vostra worklog PDFs from May, June, July, August 1, and August 10 Part 1.
- Generated worklog artifact: `alla_vostra_worklog_august10_part2.pdf`
